1. General info & Installation

1.1 Few words on start

Our new theme called "**Bretheon**" is especially delivered for all those who prefer to manage all elements on the page. Here you will find things like content builder, shortcodes, revolution slider or detailed theme options panel. Be sure that with our new theme you can easily customize whatever you want on your page. Please also note that all this options are amazingly easy to use.

1.2 Package from themeforest

At first, after purchasing this theme please download the package from Themeforest. All you need to do that is move your mouse over your login name **in right top corner** (of course after you're logged in Themeforest) and then click **Download**. Here you will find all the items that you have purchased. It looks exactly just as the diagram below:

In the next step click the **Download** button next to Bretheon theme and save package on your computer.

In the package you can find things like *documentation, license, psd files, zipped file with theme files* and folder with theme files called **Bretheon**. Please unpack the whole package after downloading it from Themeforest.

1.3 How to install & update it?

At first please make sure that you have unpacked the whole package shown in the last point. **This is very important!** You can complete installation in two different ways:

1. **WordPress Theme Manager** - please go to **Appearance > Themes > Install Themes > Upload**, select zipped theme folder called "bretheon.zip" and press *Install Now* button. The wordpress will do the rest for you.
2. **FTP upload** - upload non-zipped theme folder called *bretheon* to */wp-content/themes/* folder in your WordPress installation folder on your server.

In the second part of this guide we have described how to update **Bretheon**. Please make sure that you didn't make any changes in the files. If you have made changes and you don't want to lose them, the best way is to use one of freeware tools for comparing files, ex. [Beyond Compare](#) (we are not the authors of this tool so please don't ask us how to use it. Answers to how to use it can be found on their website). After comparing these files you can upload on server only the files that hasn't been changed.

If you haven't changed any theme files, all you need to do is update your version of theme by downloading the latest package from themeforest, unpacking files and uploading new files on the server while replacing the old files. Simply overwrite them.

All your data in the database are safe because after updating theme files doesn't change anything in the database. Please however always make a backup of your files & database.

2. Page creation

Creating your own page has been never so easy. To make the first step please go to *Pages > Add new*. On first sight everything looks just like in default wordpress. But when you have a look under *Visual/HTML* area you will see some *Page options*.

2.1 Getting started

Page Options

Content builder
Add new item to the content
Choose an element and click the Add Item button

Article box (1/2) | Article box (1/2)
Divider (1/1)
Portfolio (1/2) | Contact box (1/4) | Map (1/4)
Divider (1/1)
Offer slider (1/1)

Show the content
Show the content from the WordPress editor.
On Off Turn it off if you build content using Content Builder. (Use the Content item if you want to display the Content from editor within the Content Builder).

Layout
Select layout for this page
Full width. No sidebar | Left Sidebar | Right Sidebar

Sidebar
Select sidebar for this page.
Shows only if layout with sidebar is selected.
Page

Slider
Select slider for this page.
Select Muffin Offer Slider or one from the list of available [Revolution Sliders](#).
- Muffin Offer Slider -

SEO Title
These settings overrides theme options settings.

SEO Description
These settings overrides theme options settings.

SEO Keywords
These settings overrides theme options settings.

In first *Visual/HTML* area you can build your page using all available options in editor. Beyond the default options we included green button called "*Insert shortcode*". With this option you can build any page you want based on shortcodes. All available shortcodes for this theme has been described in section **Shortcodes (section 5)**.

Please note that you can build page based not only on shortcodes. You can also use Content Builder (section 2.2).

Below the **Content Builder** you can find some *Page Options*.

- **Show the content** - this options will show the content from Wordpress editor. You can turn this button on or off. If you`re using Content Builder for building content please turn this button off. If you won`t turn it off, the content from Wordpress editor will show above the Content Builder items.
- **Layout** - you can choose personal layout for each page. There is 3 options to choose: full width without sidebar, left sidebar or right sidebar.
- **Sidebar** - here you can select proper sidebar for this page (of course if in the previous option you have selected right or left sidebar). You can create your own sidebars in *Appearance > Bretheon > Getting started > Sidebars*.
- **Slider** - you can select Muffin offer slider or one of the Revolution Slider's for page. Please also note that for each page can be different slider. Of course, before select slider you need to create it with amazing **Revolution Slider (section 3)**.
- **SEO Title** - title for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)
- **SEO Description** - description for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)
- **SEO Keywords** - keywords for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)

After set up all this options on right side you can also choose right Page Template (section 2.3) for this site.

2.2 Content Builder

What about **Content Builder**? With his help web development is child's play. At first please choose an item that you need on page.

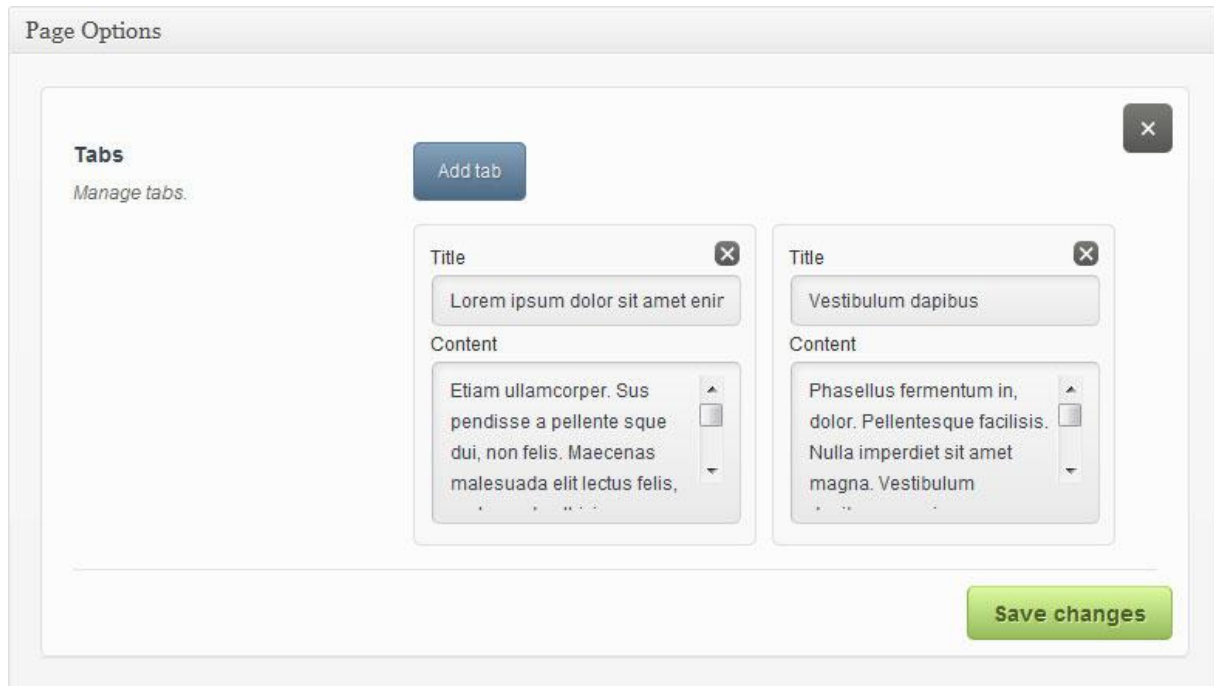

Afterward select one of the items please click *Add item* button. After that you will see the right Item already added below. You can do few things with this added Item.

- Expand Item to 1/4, 1/3, 1/2, 2/3, 3/4, 1/1 by using "+" button in the Item. The same way you can shorten this Item using "-" button. Please note that not all Items working with all sizes.
- You can delete Item if you don`t need it by × in right Item corner.
- You can edit each Item by click on "pencil" in right bottom corner in the Item.
- You can also move any Item by drag & drop.

Please remember that Content Builer is working only with *Default template*.

You can choose one of below items:

a) Accordion

This Item is adding *Vertical tabs* on page. You can add as many tabs as you need, just type *Title* and *Content* for each tab.

Available sizes: '1/4', '1/3', '1/2', '2/3', '3/4', '1/1'

Attributes: this item similar to Tabs Item doesn't have attributes like other Items. Instead of you can add new tabs by clicking "Add tab" and delete them by clicking X.

If you want to add new slide into your theme please go to *Slider Offer > Add new*. As you can see there are a lot of options. We will explain each of them step by step:

- The first input is the main (largest) text for slide

Below this large input there are *Slide Options*:

- **Text** - text content on slide
- **Button text** - text on the button (button will appear only if this field is not empty)
- **Button link** - link for the button (button will appear only if this field is not empty)
- **Image position** - choose if you want image/video on left or right side
- **Background color** - choose background color for slide
- **Vimeo video ID** - type ID for vimeo video if you want to show it on slide
- **YouTube video ID** - type ID for youtube video if you want to show it on slide

You also need to set *featured image* that can be set up on the right side. After that just click "*Publish*" button.

Remember that you can add as many slides as you want.

3.1.2 What options are available?

You can set up some options for slider to adjust it to your needs. To do it please go to *Theme options > Getting started > Slider Offer*. For more info about slider options please go to *Appearance > Theme options > Getting started > Slider Offer* (section 4.1.4)

3.2 Revolution Slider

3.2.1 Getting demo slider

In package downloaded from Themeforest you can find **slider-demo** folder that has included *uploads* folder and *slider1.txt* file. In first step please upload content from uploads folder to your *wp-content/uploads* folder. In next step you need to go to **Revolution Slider**, click button "Create new slider" and fill below fields:

Slider Title: Slider 1

Slider Alias: slide1

In next step please click "Create Slider" button.

On the list of available sliders, click on slider that you already created and in the bottom section you will see "Show Export / Import" link. After that you will get field to select file. You need to choose *slider1.txt* file in this step and click "Import Slider" button.

Troubleshooting

3.2.2 Slider management

After pressing the "*Create New Slider*" button you will reach a form where you are asked to enter a *Slider Title* (used for the Slider overview in this backend) and a *Slider Alias* (a slug that is used to implement the Slider in your WP later, so keep it simple with no spaces and special chars).

You are also prompted to enter the *Sliders Basic Settings*, a *Slider Title* (for you to remember the Slider by) and a *Slider Alias* (please do not use special characters or spaces here, this defines the shortcode for you to use in your content).

The options in the boxes on the right side (General Settings, Position, Appearance, Navigation, Thumbnails) have helping Tooltips on mouseover so they are not explained here.

The Slider Type can be fixed (not responsive, fix dimensions), responsive (changes depending on the size of its max. sizes given later in relation to the screen size) or fullwidth (always 100% in width of the screen size, but height keeping the aspect ratio).

The Sizes section is needed to fit the slider in all screen sizes needed. The height of the slider will always be calculated to keep the aspect ratio from the max width and height given in the Slider Size line.

The next step is creating/editing slides. You get there by just clicking on "*Edit Slides*" in the Slider Form window.

Just press "*New Slide*" and the native WP Media Upload dialog window will appear. Choose or Upload the slide's background image, choose "*Full Size*" and then "*Insert Into Post*" (all like you are used to it in your WP editor). You can always click on the pic to change it.

Use the arrow handles on the right side to change the slides position in the slider (top to bottom = first to last slide to be shown) or delete it with the "*Delete*" button.

The "*Edit Slide*" leads you to the next chapter "*Slide*".

In the "*Edit Slide*" view you see the heart of our plugin. The drag&drop Caption editor.

But first please note that you have another chance here to change the background image with the "*Change Image*" button.

To create a Layer (Caption, Image or Video) press the button "*Add Layer*" or "*Add Layer: Image*". In case of a text layer a basic layer will be created you can use the "*Text*" field in the Layer Params to change the caption on it. The "*Style*" selectbox shows some basic styles (CSS classes) you can use to style the caption (you can always add own CSS classes to this field or edit the existing ones via the "*Edit CSS File*").

In case of an Image Layer you will see the native WP Media Uploader again. In case of a Video Layer you will be prompted to a custom Video selection wizard.

You now can move the Layers around via drag&drop or type in the x and y coordinate in the corresponding fields.

The "*Layers Sorting*" drag&drop list determines the Layers' z-index. This list specifies the stack order of an element.

An element with greater stack order is always in front of an element with a lower stack order.

Please also note that slider is a plugin and whole documentation for this item you can find in *documentation/revolution-slider-documentation* folder in package downloaded from themeforest.

Remember: please set up chmod on 777 on below folders to show slider thumbnails and for possibility to edit CSS styles for slider in admin panel.

revslider\rs-plugin\css

4. Theme options panel

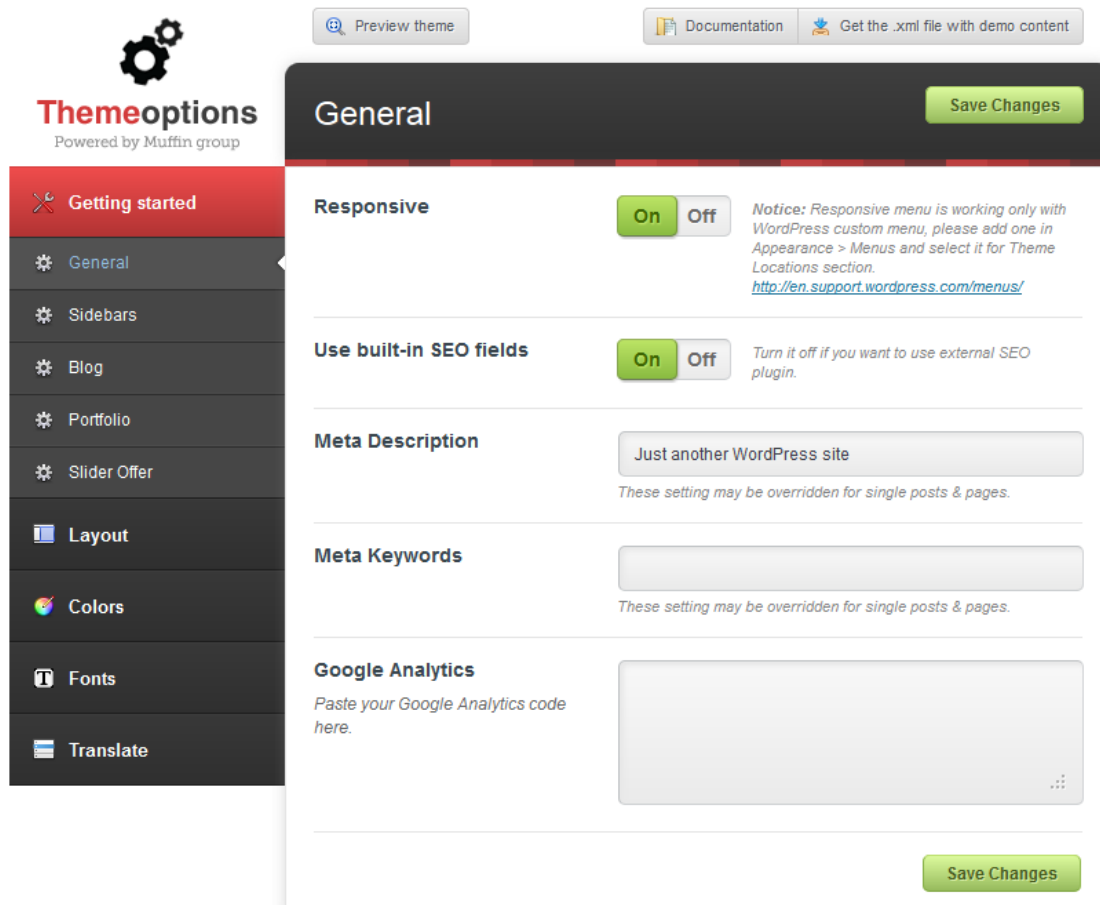

Theme options panel has been especially created to make your work faster and easier. Using it is very easy and in just a few minutes you can change a lot of things on your page.

4.1 Getting started

4.1.1 General

In this section you can set up some general options for your site. You can find here things like *Google Analytics*, *Responsive version*, etc. Please check below options available in this section:

- **Responsive** - choose if you want to use responsive version or not.
- **Use built-in SEO fields** - if you are using external SEO plugin you can easily turn off built-in SEO option.
- **Meta Description** - this is meta description for homepage but it's also default description for each page added in *Pages* section.
- **Meta Keywords** - this is meta keywords for homepage but it's also default keywords for each page added in *Pages* section.
- **Google Analytics** - paste your Google Analytics code to track your site.

The screenshot shows the 'Theme Options' panel for a WordPress theme, specifically the 'General' section. The panel is titled 'Themeoptions Powered by Muffin group' and has a navigation menu on the left with options: Getting started, General, Sidebars, Blog, Portfolio, Slider Offer, Layout, Colors, Fonts, and Translate. The 'General' section is active and contains the following settings:

- Responsive**: A toggle switch is set to 'On'. A notice states: 'Notice: Responsive menu is working only with WordPress custom menu, please add one in Appearance > Menus and select it for Theme Locations section. <http://en.support.wordpress.com/menus/>'
- Use built-in SEO fields**: A toggle switch is set to 'On'. A note says: 'Turn it off if you want to use external SEO plugin.'
- Meta Description**: A text input field contains 'Just another WordPress site'. A note below says: 'These setting may be overridden for single posts & pages.'
- Meta Keywords**: An empty text input field. A note below says: 'These setting may be overridden for single posts & pages.'
- Google Analytics**: A large text area for pasting code. A note says: 'Paste your Google Analytics code here.'

Buttons for 'Preview theme', 'Documentation', and 'Get the .xml file with demo content' are at the top. 'Save Changes' buttons are located at the top right and bottom right of the panel.

4.1.2 Sidebars

The screenshot displays the 'Sidebars' configuration interface. At the top, there are links for 'Preview theme', 'Documentation', and 'Get the .xml file with demo content'. The 'Themeoptions' logo is on the left. The navigation menu on the left includes 'Getting started', 'General', 'Sidebars', 'Blog', 'Portfolio', 'Slider Offer', 'Layout', 'Colors', 'Fonts', and 'Translate'. The main panel is titled 'Sidebars' and features a 'Save Changes' button. The 'Default Layout' section, described as 'Default post or page sidebar', offers three visual options: 'Full width without sidebar', 'Left Sidebar', and 'Right Sidebar'. The 'Sidebars' section, described as 'Manage custom sidebars', includes a text input 'type sidebar title here', an 'Add sidebar' button, and a list of existing sidebars: 'Page' and 'Blog', each with a delete icon. A note below states 'Sidebars can be used on pages, blog and portfolio'. A second 'Save Changes' button is located at the bottom right of the panel.

This is default option for pages and posts. Here you can set whether your post or page should have full width or maybe include a sidebar (left or right). For example when you choose *Left sidebar* each of your pages or post that you will create will have left sidebar. **Of course, this is only default option and while creating page or post you can set up your own layout.**

You can also manage your Sidebars here. You can add new and delete existing one.

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.1.3 Blog

Themeoptions
Powered by Muffin group

Preview theme | Documentation | Get the .xml file with demo content

Blog

Save Changes

- Posts per page**
Number of posts per page.
- Show Categories**
Show categories on single post. On Off These setting may be overridden for single posts.

- Social network sharing**
Show social network sharing on single post. On Off These setting may be overridden for single posts.
- Read more**
Read more button text.
Leave blank if you don't want the buttons on blog page.
- All pages in pagination**
 On Off Show all of the pages instead of a short list of the pages near the current page.

Save Changes

Here you can find some options for blog page. This is of course a default option for new pages. You have got the following options for blog:

- **Posts per page** - you can select how many posts should be on page.
- **Show categories** - this option will show categories on posts list and single post when it is on.
- **Show comments** - this option will show comments number on posts list and single post when it is on.
- **Show date** - this option will show date on posts list and single post when it is on.
- **Show tags** - this option will show tags on posts list and single post when it is on.
- **Social network sharing** - this option will show social network sharing on single post when it is on.

- **Read more** - here you can set up your own text for *read more button*. When input is empty the text will not be show.
- **All pages in pagination**- here you can choose if you want to show all of the pages insted of a short list of the pages near the current page.

All of this options except *Posts per page* and *Read more* can be changed for each post.

Please always remember to click "*Save Changes*" button. Without that you will lose all your changes.

4.1.4 Portfolio

The screenshot displays the 'Portfolio' settings page within the Themeoptions interface. At the top, there are links for 'Preview theme', 'Documentation', and 'Get the .xml file with demo content'. The main settings area includes:

- Posts per page:** A text input field containing the number '8'. Below it, the text reads 'Number of portfolio posts per page.'
- Layout:** Three grid icons representing 'Two columns', 'Three columns', and 'Four columns'. Below the icons, the text reads 'Layout for portfolio items list.'
- Portfolio Page:** A dropdown menu currently set to 'Portfolio'. Below it, the text reads 'Assign page for portfolio.'
- Single item slug:** A text input field containing 'portfolio-item'. To the right, an important note states: 'Important: Do not use characters not allowed in links. Must be different from the Portfolio site title chosen above, ex. "portfolio-item". After change please go to "Settings > Permalinks" and click "Save changes" button.'
- Order by:** A dropdown menu currently set to 'Menu order'. Below it, the text reads 'Portfolio items order by column.'
- Order:** A dropdown menu currently set to 'Ascending'. Below it, the text reads 'Portfolio items order.'
- jQuery filtering:** Two radio buttons, 'On' (selected) and 'Off'. To the right, a note states: 'When this option is enabled, portfolio looks great with all projects on single site, so please set "Posts per page" option to bigger number'

A 'Save Changes' button is located at the top right and bottom right of the settings area. On the left, a sidebar menu includes 'Getting started', 'General', 'Sidebars', 'Blog', 'Portfolio', 'Slider Offer', 'Layout', 'Colors', 'Fonts', and 'Translate'.

This option will certainly be very helpful in creating your portfolio page. Here you can set the following options:

- **Posts per page** - this is the number of portfolio posts per page.
- **Layout** - you can choose what layout will be the best for your portfolio (one, two, three or four columns)
- **Portfolio page** - here you can select the right page for portfolio from list of all created pages. You need to choose a page for that because the theme applies info such a layout, sidebar and link to page in breadcrumbs.
- **Single item slug** - this is a link to single item. After changing that option please go to "Settings > Permalinks" and click "Save changes" button.
- **Order by** - you can select what should be used to sort your portfolio.
- **Order** - you can choose how your portfolio should be ordered (ascending or descending).
- **jQuery filtering** - you can choose if you want to filter portfolio items using jquery plugin to make your portfolio look much better.

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.1.4 Slider Offer

The screenshot displays the 'Slider Offer' settings page in the Themeoptions theme. At the top, there are links for 'Preview theme', 'Documentation', and 'Get the .xml file with demo content'. The main content area is titled 'Slider Offer' and features a 'Save Changes' button in the top right corner. The settings are organized into three sections:

- Timeout**: A text input field containing '8000'. Below it, the text reads 'Milliseconds between slide transitions.' To the right, a note states 'This option can be used only with Autoplay.'
- Autoplay**: A toggle switch set to 'On'. Below it, the text reads 'Auto transition between slides.' To the right, a note states 'This option can be used only with Timeout > 0.'
- Pause on Hover**: A toggle switch set to 'On'. Below it, the text reads 'Pause slider on slide or pager hover.' To the right, a note states 'This option can be used only with Autoplay.'

At the bottom right of the settings area, there is another 'Save Changes' button. The sidebar on the left contains a navigation menu with the following items: 'Getting started', 'General', 'Sidebars', 'Blog', 'Portfolio', 'Slider Offer' (highlighted), 'Layout', 'Colors', 'Fonts', and 'Translate'.

This option will certainly be very helpful in creating slider offer on page. Here you can set the following options:

- **Timeout** - time in milliseconds between slides transitions.
- **Autoplay** - choose if you want auto transitions between slides
- **Pause on Hover** - choose if you want pause slides on hover

Please always remember to click "*Save Changes*" button. Without that you will lose all your changes.

4.2 Layout

In this section you can set up some layout options such as social icons or logo.

4.2.1 General

The screenshot shows the 'General' settings panel in the Themeoptions interface. On the left is a sidebar with navigation options: Getting started, Layout (highlighted), General, Social Icons, Footer, Custom CSS, Colors, Fonts, and Translate. The main panel has a dark header with 'General' and a 'Save Changes' button. At the top of the panel are links for 'Preview theme', 'Documentation', and 'Get the .xml file with demo content'. The settings are organized into sections: 'Custom Logo' with a 'Browse' button and a note about the best size (220px x 70px); 'Custom Favicon' with a 'Browse' button and a note to use ICO format; 'Layout' with two options: 'Boxed' (selected) and 'Full width'; 'Overlay' with seven options (0-7) and a note that it only works with the 'Boxed' layout; 'Background image' with a 'Browse' button and a note that it only works with the 'Boxed' layout; 'Header Telephone number' with a text input containing '+61 (0) 3 8376 6284' and a note to wrap text in a 'span' tag; and 'Header Email address' with a text input containing 'noreply@envato.com'. A 'Save Changes' button is located at the bottom right of the panel.

Save Changes

This section is created for header. Here you can set up some options like:

- **Custom Logo** - upload the image with your logo
- **Custom Favicon** - upload image with your favicon (only **ICO format** can be used here)
- **Layout** - choose if you want boxed or full width layout
- **Overlay** - choose overlay for boxed version of page
- **Background image** - choose image for background when page is boxed
- **Header Telephone number** - type your telephone number
- **Header Email address** - type your email address

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.2.2 Social Icons

The screenshot displays the 'Social Icons' configuration page in the Themeoptions theme customizer. The sidebar on the left includes a 'Social Icons' menu item. The main panel features a list of social media platforms, each with a text input field for its URL. The platforms listed are Facebook, Google+, Twitter, Vimeo, YouTube, Flickr, LinkedIn, Pinterest, and Dribbble. Each input field contains a default URL (e.g., 'http://facebook.com') and is accompanied by a small note: 'Icon won't show if you leave this field blank'. A green 'Save Changes' button is located in the top right corner of the main panel, and another is at the bottom right.

Here you can set up some options for social icons. Below we will describe all of them.

- **Facebook** - link to your facebook profile
- **Google +** - link to your Google + profile
- **Twitter** - link to your twitter profile
- **Vimeo** - link to your vimeo profile
- **YouTube** - link to your youtube profile
- **Flickr** - link to your flickr profile
- **LinkedIn** - link to your LinkedIn profile
- **Pinterest** - link to your Pinterest profile
- **Dribbble** - link to your Dribbble profile

If you leave empty field for social icons like facebook, twitter etc. **the icons will be not shown on the page.**

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.2.3 Footer

The screenshot shows the Themeoptions customizer for the Bretheon theme. The sidebar on the left lists various settings categories, with 'Footer' currently selected. The main panel is titled 'Footer' and features a 'Save Changes' button in the top right corner. It is divided into three sections:

- Footer Layout:** Offers two options for the footer layout type: 'Included' (represented by a square icon) and 'Separated' (represented by a square icon with a blue bar at the bottom).
- Footer Logo:** Displays the current logo 'Bretheon.' with a 'Remove Upload' button. A note below states, 'The best size for logo is 150px x 30px.'
- Copyright Text:** Includes a text area with the following HTML code:

```
<p>© 2013 <strong>Bretheon Premium WordPress Theme</strong>. All Rights Reserved.<br />Powered by <a href="http://wordpress.org">WordPress</a>. Created by <a href="http://themeforest.net"></a></p>
```

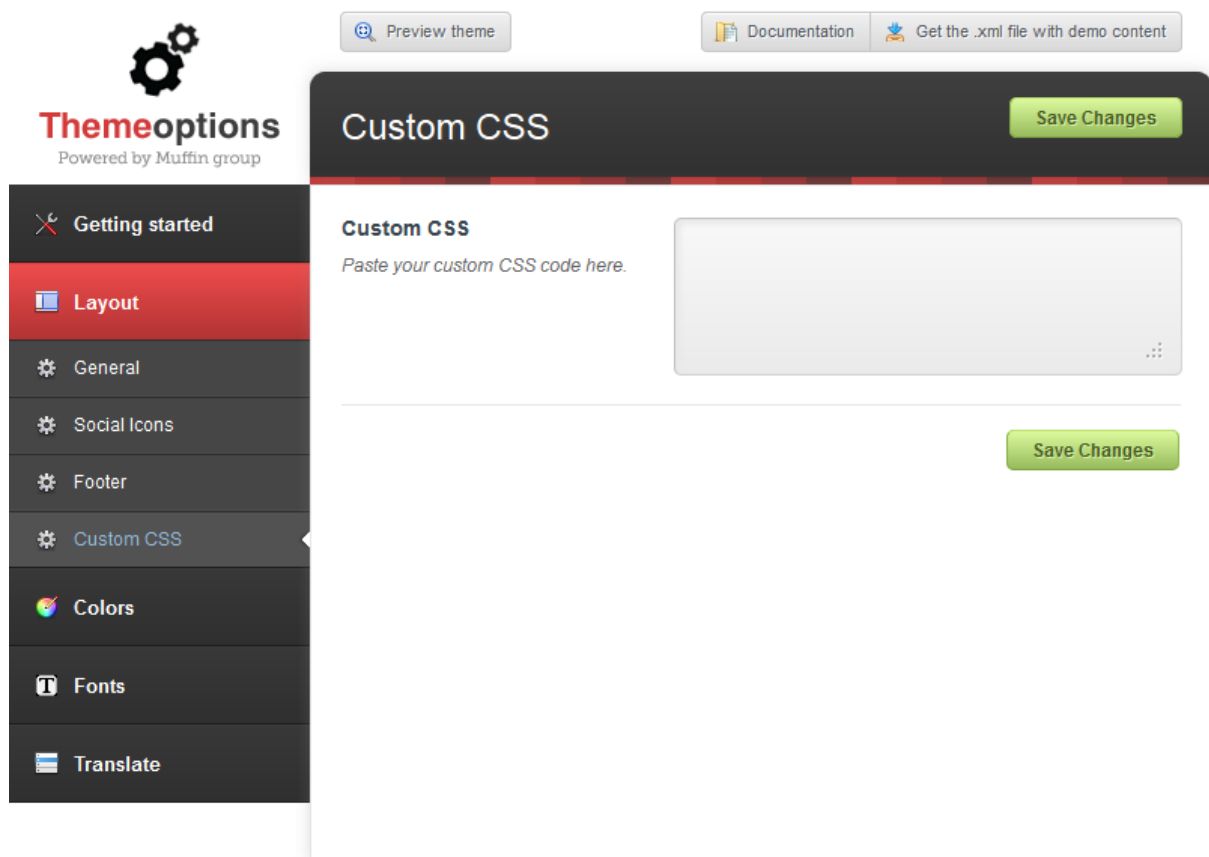

and a 'Save Changes' button at the bottom right.

This section is created for footer. Here you can set up some options:

- **Footer layout** - choose if you want included or separated footer
- **Footer Logo** - upload logo for footer or leave it empty
- **Copyright Text** - copyright text in footer section

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.2.4 Custom CSS

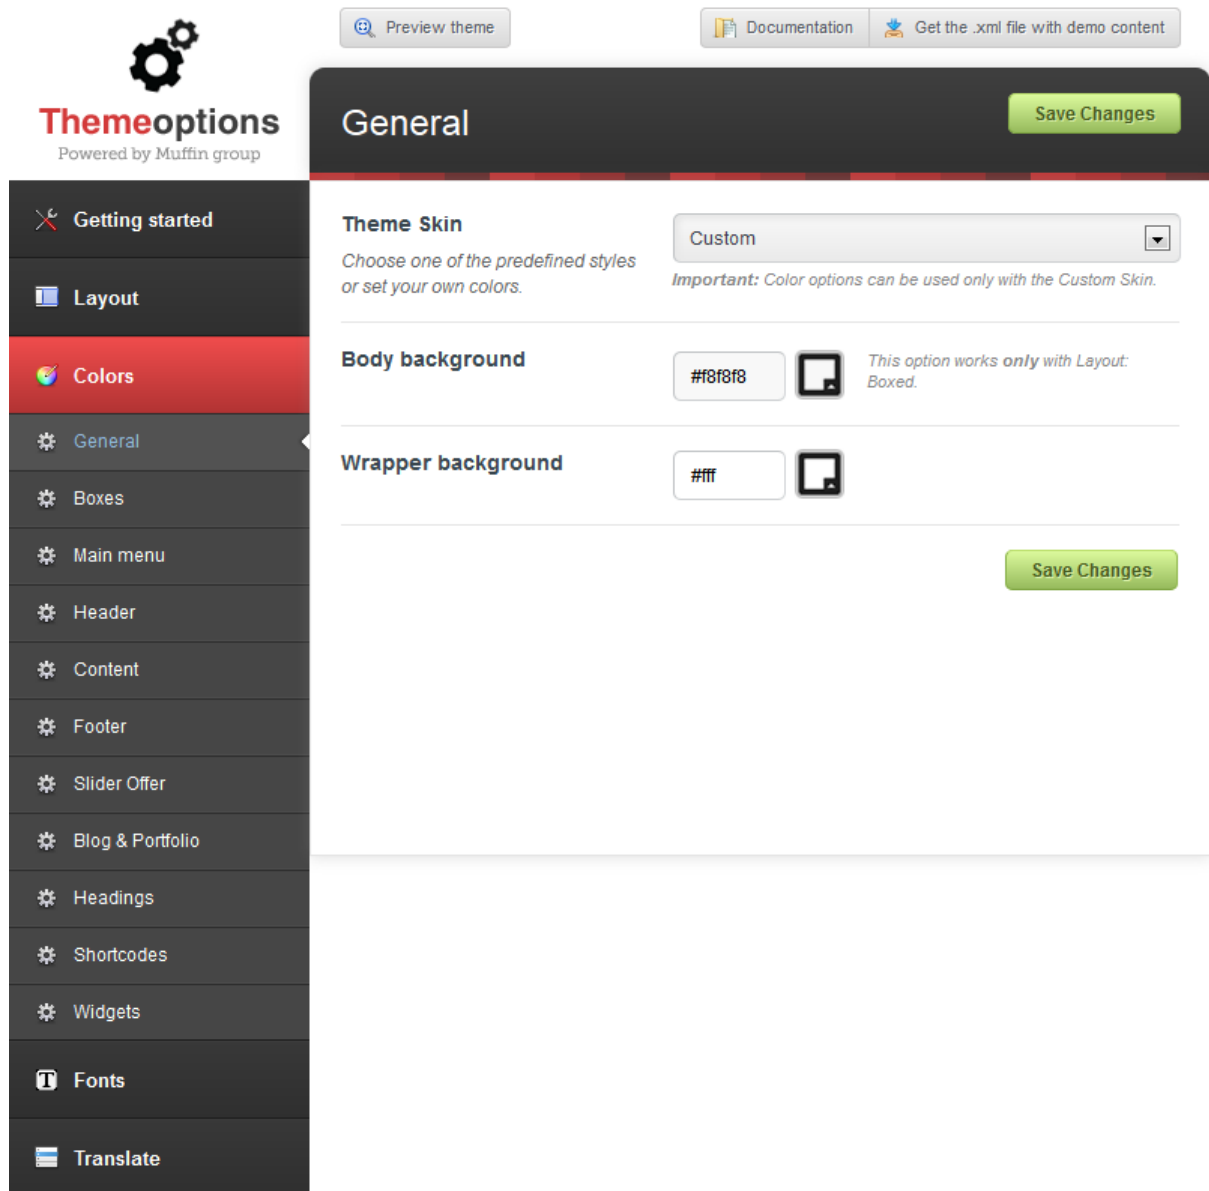

Here you can find only one field called **"Custom CSS"**. You can paste here your own css code for your page. Of a this field you don't need to make any changes in css files.

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.3 Colors

This is probably the most powerful options section in theme options panel. Here you can set up any color for each part of your page. Just check how many options you can set up in our color section.

4.3.1 General

The screenshot displays the 'Themeoptions' interface, specifically the 'General' settings section. The left sidebar contains a navigation menu with options: Getting started, Layout, Colors (highlighted), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings, Shortcodes, Widgets, Fonts, and Translate. The main content area is titled 'General' and includes a 'Save Changes' button in the top right corner. Below the title, there are three settings sections:

- Theme Skin:** A dropdown menu is set to 'Custom'. Below it, text reads: 'Choose one of the predefined styles or set your own colors.' and 'Important: Color options can be used only with the Custom Skin.'
- Body background:** A color input field contains '#f8f8f8' and a mobile device icon. A note states: 'This option works only with Layout: Boxed.'
- Wrapper background:** A color input field contains '#fff' and a mobile device icon.

A second 'Save Changes' button is located at the bottom right of the settings area.

Only three options are available in this section.

- **Theme skin** - here you can choose one of the predefined styles or you can set your own colors. Please remember that color options can be used only with the Custom Skin.

- **Body background** - choose color for your background
- **Wrapper background** - choose background color for wrapper

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.2 Boxes

The screenshot shows the 'Themeoptions' interface for configuring 'Boxes'. On the left is a sidebar menu with options: Getting started, Layout, Colors (highlighted), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings, Shortcodes, Widgets, Fonts, and Translate. The main panel is titled 'Boxes' and contains five rows, each for a 'Background color' (1 through 5). Each row has a color picker showing a hex code and a small preview icon. The hex codes are: #2a2f35, #3e444b, #326e9b, #53a3e0, and #73a7cf. A 'Save Changes' button is located at the top right and bottom right of the main panel.

In this section you can set up background colors for your boxes on page.

- **Background 1**
- **Background 2**
- **Background 3**
- **Background 4**
- **Background 5**

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.3 Main menu

The screenshot shows the Themeoptions interface. On the left is a dark sidebar with a menu: Getting started, Layout, Colors (highlighted in red), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings, Shortcodes, Widgets, Fonts, and Translate. The main content area is titled "Main menu" and contains ten settings, each with a color picker and a "Save Changes" button at the bottom right.

Setting	Value
Menu Link color	#213442
Menu Arrow color	#c5c4c4
Active Menu Link color	#629ac2
Hover Menu border	#e5e5e5
Hover Menu Arrow color	#053f57
Submenu Link color	#fff
Submenu background	#53a3e0
Submenu Link border	#87bfe9
Hover Submenu Link color	#bbedfc

- **Menu Link color** - color for links in menu
- **Menu Arrow color** - color for arrow in menu
- **Active Menu Link color** - active color for links in menu (this is also color for hover when there is no submenu)
- **Hover Menu border** - border color for hover in menu
- **Hover Menu Arrow color** - arrow color for hover in menu
- **Submenu Link color** - color for link in submenu
- **Submenu background** - background color in submenu
- **Submenu Link border** - border color for link in submenu
- **Hover Submenu Link color** - link color for hover in submenu

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.4 Header

The screenshot shows the Themeoptions interface for configuring the header. The sidebar on the left lists various settings categories, with 'Header' selected. The main panel displays six color settings for the header, each with a text input for the hex code and a small preview icon. The settings are: Phone & Email Icons color (#40464d), Phone Number color (#5890ba), Phone Number Highlight color (#326e9b), Title Area Title color (#fff), Title Area Text & Link color (#d0e6eb), and Title Area Arrow color (#4c90eb). A 'Save Changes' button is located at the top right of the settings panel, and another is at the bottom right.

- **Phone & Email Icons color** - color for phone & email icons
- **Phone number color** - color for phone number in right top corner
- **Phone Number Highlight color** - highlight color for phone number
- **Title Area Title color** - title color for title area
- **Title Area Text & Link color** - text and link color for title area
- **Title Area Arrow color** - arrow color for title area

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.5 Content

The screenshot shows the Themeoptions interface for the 'Content' settings. On the left is a dark sidebar with a menu: Getting started, Layout, Colors (highlighted in red), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings, Shortcodes, Widgets, Fonts, and Translate. The main area is titled 'Content' and contains ten settings, each with a color swatch and a preview icon. At the top right of the main area is a 'Save Changes' button. At the bottom right is another 'Save Changes' button. Above the main area are links for 'Preview theme', 'Documentation', and 'Get the .xml file with demo content'. The Themeoptions logo and 'Powered by Muffin group' are in the top left.

Setting	Color	Preview	Description
Text color	#676f76		Content text color.
Link color	#3fa8d2		
Hover Link color	#1b87b1		
Bold Note text color	#31373c		Bold Note, ex. latest post title, comment author, etc.
Dark Blue Note text color	#005274		Dark Blue Note, ex. blockquote text, phone number, etc.
Grey Note text color	#a3a3a3		Grey Note, ex. post date, etc.
Border color	#ebebeb		
Button text color	#326e9b		
Button arrow color	#9dd3e8		

- **Text color** - text color for content
- **Link color** - text color for links
- **Hover Link color** - hover color for links
- **Bold Note text color** - text color for bold note
- **Dark Blue Note text color** - text color for dark blue note
- **Grey Note text color** - text color for grey note, ex. post date, post category, etc.
- **Border color** - color for border
- **Button text color** - text color for buttons
- **Button arrow color** - arrow color for button

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.6 Footer

The screenshot shows the Themeoptions admin panel for the Footer section. The panel is titled "Footer" and has a "Save Changes" button in the top right corner. The left sidebar contains a navigation menu with the following items: Getting started, Layout, Colors (highlighted), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings, Shortcodes, Widgets, Fonts, and Translate. The main content area lists various footer settings, each with a color picker and a preview icon:

- Footer background**: #FBFBFB. *This option works only with Footer Layout: Included.*
- Go to top icon color**: #000
- Hover Go to top icon color**: #005274
- Footer heading color**: #2a2f35
- Footer text color**: #717171. *This is also Footer Menu Link color.*
- Footer Link color**: #53a3e0. *This is also Hover Footer Menu Link color.*
- Bold Note text color**: #2a2f35
- Grey Note text color**: #A6A6A6
- Borders & frames**: #e4ddd
- Footer Button text color**: #326e9b
- Footer Button arrow color**: #9DD3E8

There is a "Save Changes" button at the bottom right of the panel.

- **Footer background**- choose background color for footer
- **Go to top icon color** - icon color for go to top
- **Hover Go to top icon color** - icon color for go to top when hover
- **Footer heading color** - heading color for footer
- **Footer text color** - text color for footer
- **Footer Link color** - link color for footer
- **Bold Note text color** - text color for bold note in footer
- **Grey Note text color** - text color for grey note

- **Borders & frames** - borders and frames colors
- **Footer Button text color** - text color for button in footer
- **Footer Button arrow color** - arrow color for button in footer

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.3.7 Slider Offer

- **Slider Title color** - title color for slider
- **Slider Text color** - text color for slider
- **Slider Button text color** - text color for buttons in slider

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.3.8 Blog & Portfolio

The screenshot displays the 'Themeoptions' interface for the 'Blog & Portfolio' section. The left sidebar contains a navigation menu with options: Getting started, Layout, Colors (highlighted), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings, Shortcodes, Widgets, Fonts, and Translate. The main content area is titled 'Blog & Portfolio' and includes a 'Save Changes' button in the top right corner. Below the title, there are several settings rows, each with a label, a color input field, and a preview icon:

- Blog Date background**: #73a7cf
- Blog Day text color**: #fff
- Blog Month text color**: #cce9ff (Note: *This is also calendar icon color.*)
- Blog Year text color**: #385a75
- Blog Comments background**: #326e9b
- Blog Comments text color**: #ddeffc
- Portfolio Item Icon color**: #3FA8D2
- Portfolio Item Title color**: #09526F

A second 'Save Changes' button is located at the bottom right of the settings area.

- **Blog Date background** - background color for blog date in blog
- **Blog Day text color** - text color for day in blog
- **Blog Month text color** - text color for month in blog
- **Blog Year text color** - text color for year in blog
- **Blog Comments background** - background color for comments in blog
- **Blog Comments text color** - text color for comments in blog
- **Portfolio Item Icon color** - icon color for portfolio item
- **Portfolio Item Title color** - title color for portfolio item

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.9 Headings

The screenshot shows the Themeoptions interface for configuring heading colors. The left sidebar contains a menu with items: Getting started, Layout, Colors (highlighted), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings (highlighted), Shortcodes, Widgets, Fonts, and Translate. The main content area is titled 'Headings' and contains the following settings:

Heading	Color	Preview
Heading H1 color	#313131	
Heading H2 color	#313131	
Heading H3 color	#313131	
Heading H4 color	#313131	
Heading H5 color	#09526f	
Heading H6 color	#31373c	

- **Heading H1 color** - text color for h1 (Subpages header title font color)
- **Heading H2 color** - text color for h2
- **Heading H3 color** - text color for h3
- **Heading H4 color** - text color for h4
- **Heading H5 color** - text color for h5
- **Heading H6 color** - text color for h6

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.10 Shortcodes

The screenshot displays the 'Shortcodes' settings panel in the Themeoptions interface. The panel is titled 'Shortcodes' and has a 'Save Changes' button in the top right corner. On the left side, there is a navigation menu with the following items: Getting started, Layout, Colors (highlighted in red), General, Boxes, Main menu, Header, Content, Footer, Slider Offer, Blog & Portfolio, Headings, Shortcodes, Widgets, Fonts, and Translate. The main content area lists the following settings:

Setting Name	Color Value	Preview Icon
Accordion & Tabs background	#fbfbfb	[Preview]
Accordion & Tabs inner background	#fff	[Preview]
Accordion & Tabs Title color	#515e6d	[Preview]
Active Accordion & Tabs Title color	#313131	[Preview]
Active Tab border	#66A6D8	[Preview]
Call To Action background	#326E9B	[Preview]
Call To Action Text color	#fff	[Preview]
Call To Action Highlight color	#B7E8FF	[Preview]
Call To Action Button text color	#fff	[Preview]
Our Offer Title color	#53a3e0	[Preview]
Our Offer Subtitle color	#2a2f35	[Preview]
Our Offer Link color	#2a2f35	[Preview]

A 'Save Changes' button is located at the bottom right of the settings panel.

- **Accordion & Tabs background** - background color for accordions and tabs
- **Accordion & Tabs inner background** - inner background color for accordions and tabs
- **Accordion & Tabs Title color**- title color for accordions and tabs
- **Active Accordion & Tabs Title color**- title color when active for accordions and tabs
- **Active Tab border** - border color for active tab

- **Call To Action background** - background color for call to action item
- **Call To Action text color** - text color for call to action item
- **Call To Action highlight color** - highlight color for call to action item
- **Call To Action button text color** - button text color for call to action item
- **Our Offer Title color** - title color for our offer item
- **Our Offer Subtitle color** - subtitle color for our offer item
- **Our Offer Link color** - link color for our offer item

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.11 Widgets

The screenshot displays the 'Themeoptions' interface for configuring widgets. The sidebar on the left lists various settings categories, with 'Colors' currently selected. The main panel, titled 'Widgets', contains the following settings:

- Sidebar background:** #f9f9f9
- Muffin Menu background:** #FFFFFF
- Muffin Menu link color:** #475363
- Active Muffin Menu link color:** #fff
- Active Muffin Menu link background:** #3C95B8

Each setting includes a color selection field and a preview icon. 'Save Changes' buttons are located at the top right and bottom right of the settings area.

- **Sidebar background** - background color for sidebar
- **Muffin Menu background** - background color for muffin menu
- **Muffin Menu link color** - link color for muffin menu
- **Active Muffin Menu link color** - link color when active for muffin menu
- **Active Muffin Menu link background** - background color for link when muffin menu is active

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.4 Fonts

In this section you can set up fonts for your website. We divided this section on four blocks what you can see below.

4.4.1 Font Family

The screenshot shows the 'Font Family' settings page in Themeoptions. The sidebar on the left has 'Fonts' selected. The main content area has a 'Font Family' title and a 'Save Changes' button. Below the title are four font settings:

- Content Font**: This font will be used for all theme texts except headings and menu. The selected font is Titillium Web.
- Main Menu Font**: This font will be used for header menu. The selected font is Patua One.
- Headings Font**: This font will be used for all headings. The selected font is Patua One.
- Google Font Subset**: Specify which subsets should be downloaded. Multiple subsets should be separated with coma (,). There is a text input field for this setting.

At the bottom right of the main content area, there is another 'Save Changes' button.

- **Content Font** - this font will be used for all theme texts except *headings* and *menu*
- **Main Menu Font** - this font will be used for header menu
- **Headings Font** - this font will be used for all headings
- **Google Font Subset** - you can specify which subsets should be downloaded. Multiple subsets should be separated with coma (,)

You can choose your own font from a palette of **over 500 fonts**.

4.4.2 Font Size

The screenshot shows the 'Font Size' configuration interface. On the left is a sidebar with navigation options: Getting started, Layout, Colors, Fonts (highlighted), Font Family, Font Size, and Translate. The main panel has a dark header with 'Font Size' and a 'Save Changes' button. Below the header, there are seven rows, each representing a different text element. Each row contains a label, a descriptive note, a slider control, and a numeric input field. The current values are: Content (14), Heading H1 (50), Heading H2 (42), Heading H3 (28), Heading H4 (24), Heading H5 (20), and Heading H6 (14). A second 'Save Changes' button is located at the bottom right of the panel.

Text Element	Current Font Size
Content	14
Heading H1	50
Heading H2	42
Heading H3	28
Heading H4	24
Heading H5	20
Heading H6	14

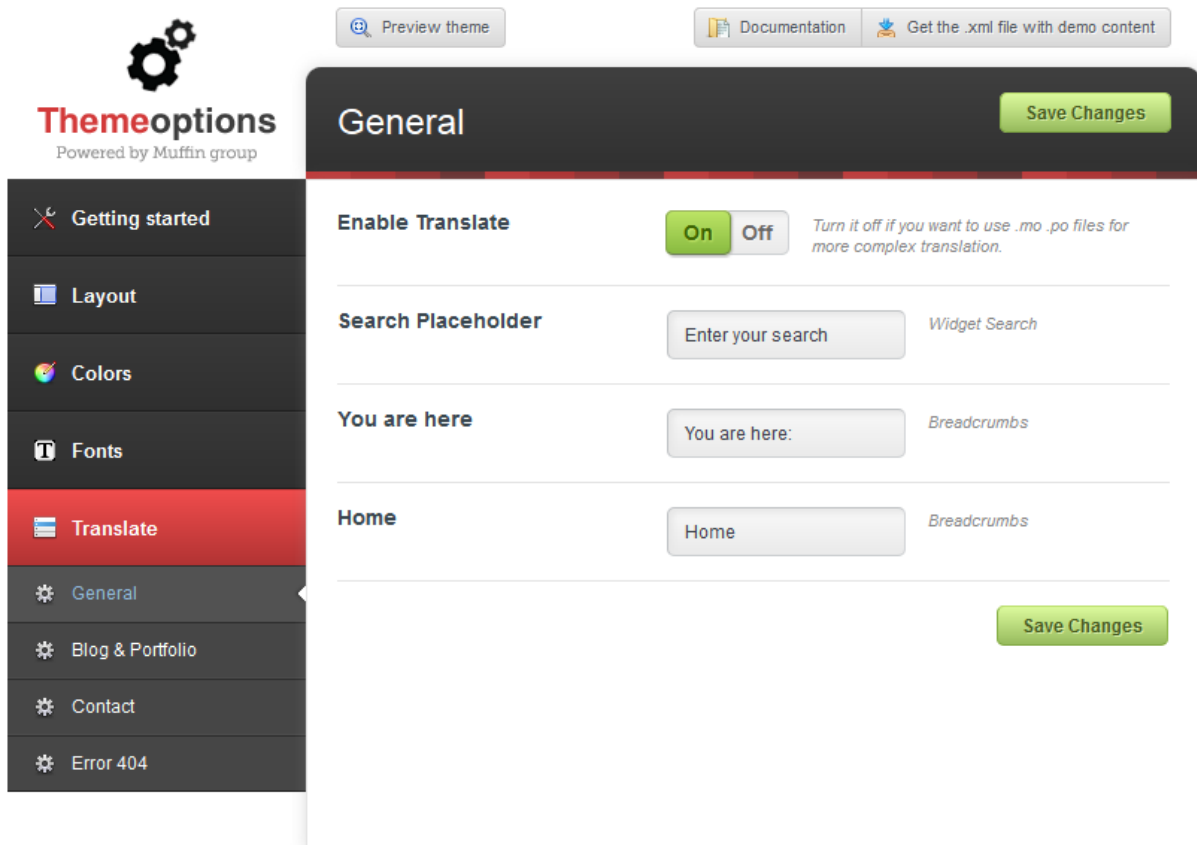

- **Content** - this font size will be used for all theme texts
- **Heading H1** - this font will be used for h1 headings
- **Heading H2** - this font will be used for h2 headings
- **Heading H3** - this font will be used for h3 headings
- **Heading H4** - this font will be used for h4 headings
- **Heading H5** - this font will be used for h5 headings
- **Heading H6** - this font will be used for h6 headings

You can select the font size of the range **1-70**.

4.5 Translate

Translating the most important sections on the page has never been so easy.

4.5.1 General

The screenshot shows the Themeoptions interface. On the left is a dark sidebar with a menu: Getting started, Layout, Colors, Fonts, Translate (highlighted in red), General, Blog & Portfolio, Contact, and Error 404. The main content area is titled 'General' and contains the following settings:

- Enable Translate:** A toggle switch is currently set to 'On'. A note says: "Turn it off if you want to use .mo .po files for more complex translation."
- Search Placeholder:** A text input field contains "Enter your search". A label "Widget Search" is to its right.
- You are here:** A text input field contains "You are here:". A label "Breadcrumbs" is to its right.
- Home:** A text input field contains "Home". A label "Breadcrumbs" is to its right.

There are two green 'Save Changes' buttons: one at the top right of the 'General' panel and one at the bottom right of the settings area.

It depends how you want translate your theme. If you don't want to translate using .mo and .po files you can do it easily in this section.

- **Enable Translate** - you can turn it off if you want to use .mo/.po files for more complex translation.
- **Search Placeholder** - here you can set up placeholder text for *Header* and *Widget Search*
- **You are here** - here you can set up breadcrumbs text
- **Home** - here you can set up breadcrumbs text

4.5.2 Blog & Portfolio

The screenshot shows the 'Themeoptions' interface for the 'Blog & Portfolio' section. The sidebar on the left lists various settings categories, with 'Blog & Portfolio' currently selected. The main content area displays a list of settings for the 'Blog & Portfolio' page, each with a text input field and a 'Save Changes' button. The settings include:

- Next page**: Next page > (Blog, Portfolio)
- Previous page**: < Prev page (Blog, Portfolio)
- Select category**: Select category: (Portfolio)
- All**: All (Portfolio)
- Category**: Category: (Single Blog, Single Portfolio)
- Comments**: Comments: (Blog)
- Project Description**: Project Description: (Single Portfolio)
- Client**: Client (Single Portfolio)
- Date**: Date: (Single Portfolio)
- Project URL**: Project URL: (Single Portfolio)
- Visit online**: Visit online → (Single Portfolio)
- Back to list**: Back to list (Single Portfolio)

This is area where you can set up some texts for your portfolio and blog page.

- **Next page** - text available on blog & portfolio page
- **Previous page** - text available on blog & portfolio page
- **Select category** - text available on portfolio page
- **All** - text available on portfolio page
- **Category** - text available on blog & single portfolio page

- **Comments** - text available on blog page
- **Project Description** - text available on single portfolio page
- **Client** - text available on single portfolio page
- **Date** - text available on single portfolio page
- **Project URL** - text available on single portfolio page
- **Visit online** - text available on single portfolio page
- **Back to list** - text available on single portfolio page

4.5.3 Contact

Themeoptions

twitter *Contact Box*

Your name *Contact Form*

Your e-mail *Contact Form*

Subject *Contact Form*

Send message *Contact Form*

Success message *Contact Form*

Error message *Contact Form*

Save Changes

Translate the most important things in **Contact**.

- **phone number** - translate "phone number" in contact box
- **our address** - translate "our address" in contact box
- **email address** - translate "email address" in contact box
- **twitter** - translate "twitter" in contact box
- **Your name** - translate "Your name" in contact form
- **Your e-mail** - translate "Your e-mail" in contact form
- **Subject** - translate "Subject" in contact form
- **Send message** - translate "Send message" in contact form
- **Success message** - translate "Success message" in contact form
- **Error message** - translate "Error message" in contact form

4.5.4 Error 404

The screenshot shows the Themeoptions admin interface. On the left is a sidebar with menu items: Getting started, Layout, Colors, Fonts, Translate (highlighted in red), General, Blog & Portfolio, Contact, and Error 404. The main content area is titled 'Error 404' and contains four configuration sections, each with a text input field and a preview of the rendered text:

- Title:** Input field contains 'Oops... Error 404'. Preview: 'Oops... Error 404'.
- Subtitle:** Input field contains 'We're sorry, but the page you are looking for doesn't exist.'. Preview: 'We're sorry, but the page you are looking for doesn't exist.'.
- Text:** Input field contains 'Please check entered address and try again or'. Preview: 'Please check entered address and try again or'.
- Button:** Input field contains 'go to homepage'. Preview: 'Go To Homepage button'.

There are 'Save Changes' buttons in the top right and bottom right corners of the configuration area.

Now your **Error 404** page is 100% configurable. You can set up here below options:

- **Title** - this is title for error 404 page
- **Subtitle** - this is subtitle for error 404 page
- **Text** - text message for error 404 page
- **Button** - this is text for button on error 404 page

For each fields you can set up your own text.

5. Shortcodes

As you know, shortcodes are really useful in creating pages, and they accelerate your work. That's the main reason why we have created them. Below you'll learn how to use them in the "Bretheon" theme. There is a lot of them and they are easy to use.

5.1 Adding shortcodes in content using wp-editor

You can use shortcodes directly in WP editor. Just click on green circle button with plus inside. After that you'll see whole list of shortcodes. After select right shortcode and click "Insert", the shortcode will be inserted into editor.

5.2 List of available shortcodes & how to use them

1) Buttons - as name indicates, these are the buttons to use on pages. Attributes for buttons are:

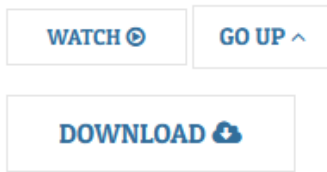

- **link** (link to other page)
- **title** (title for button)
- **target** (optional target for link, ex. "_blank")
- **size** (optional size of button - "normal" is default, you can also choose "small" or "large")
- **color** (color for text - as in background color you can use name of color, ex. "white" or hex ex. "#FFFFFF")

Below you can see the example of buttons shortcode:

```
[button link="http://muffingroup.com" target="_blank" title="Muffin group" size="large" color="orange"]
```

Preview:

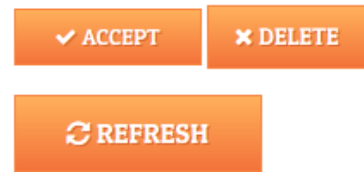

default

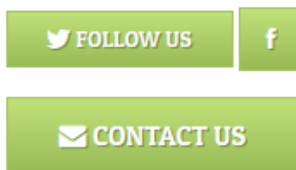

red

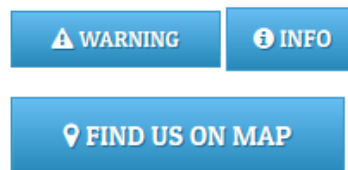

orange

green

blue

yellow

For more info and demo please go to [buttons shortcode demo](#)

2) Divider - This item is creating space between elements. It is also aligning for a single line, boxes located underneath.

Divider shortcode has got 2 attributes:

- **height** - enter the amount of the divider height (in px)
- **line** - type 1 if you want to show line, 0 if you don't want

Example of this shortcode below:

```
[divider height="30" line="1"]
```

For more info and demo please go to [divider shortcode demo](#)

3) Ico - this is a very useful option for embedding icons into page. This option has got just one attribute:

- **type** (type of icon)

Below you can see some examples of this shortcode:

```
[ico type="ico-file"]
```

```
[ico type="ico-copy"]
```

For more info and demo please go to [ico shortcode demo](#)

4) Image - this is a very useful option for embedding images into page. This option has got a long list of available attributes:

- **src** (url to image)
- **align** (optional alignment for image) - available values: none (default), left, right, center
- **caption** (optional) - text available under the image
- **link** (optional) - link for larger image or other page
- **link_type** (optional) - type of link can be chosen from 2 values available:
- **target** (optional, works only with "details" link_type) - link target, available value: "_blank" (open in new window)
- **alt** (optional) - alternative text for image

Below you can see some examples of this shortcode:

```
[image src="" link="" align="left" caption="Align left with caption and  
lightbox"]  
  
[image src="" link="" link_type="details" target="_blank" align="right"  
caption="Align right with caption <br /> and link to details <br /> open in  
new window"]  
  
[image src="" align="center"]
```

For more info and demo please go to [image shortcode demo](#)

5) Lists - great tool when you want to present something within the list. We prepared 11 types of lists. Below you can check all of them:

Unordered bullet list

```
<ul class="list">  
<li>List item 1</li>  
<li>List item 2</li>  
</ul>
```

Ordered list

```
<ol class="list">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Roman ordered list

```
<ol class="list list_roman">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Alpha ordered list

```
<ol class="list list_alpha">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Unordered tick list

```
<ul class="list list_tick">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered info list

```
<ul class="list list_info">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered warning list

```
<ul class="list list_warning">  
<li>List item 1</li>  
<li>List item 2</li>  
</ul>
```

Unordered plus list

```
<ul class="list list_plus">  
<li>List item 1</li>  
<li>List item 2</li>  
</ul>
```

Unordered minus list

```
<ul class="list list_minus">  
<li>List item 1</li>  
<li>List item 2</li>  
</ul>
```

Unordered arrow list

```
<ul class="list list_arrow">  
<li>List item 1</li>  
<li>List item 2</li>  
</ul>
```

Unordered help list

```
<ul class="list list_help">  
<li>List item 1</li>  
<li>List item 2</li>  
</ul>
```

As you can see, all of these lists have only a different kind of class. So if you want to change type of the list, you can easily do so by just changing the name of class..

For more info and demo please go to [lists shortcode demo](#)

6) Vimeo - this shortcode is for embadding vimeo videos on your page.

Vimeo video shortcode has got 3 attributes:

- **video** - vimeo video`s ID. This value is placed at the end of every vimeo video after last "/", for example: <http://vimeo.com/19819283>
- **width** - player`s width, 700 is highly recommended for left or right sidebar template while 950 for a default one.
- **height** - video player`s height

Example of this shortcode below:

```
[vimeo video="1084537" width="700" height="400"]
```

For more info and demo please go to [video shortcode demo](#)

7) Youtube - this shortcode is for embadding youtube videos on your page.

Youtube video shortcode have got 3 attributes:

- **video** - youtube video`s ID. This value is placed at the end of every video after "v=" parameter, for example: <http://www.youtube.com/watch?v=YE7VzLLtp-4>
- **width** - player`s width, 700 is highly recommended for left or right sidebar template while 950 for a default one.
- **height** - video player`s height

Example of this shortcode below:

```
[youtube video="YE7VzLLtp-4" width="700" height="420"]
```

For more info and demo please go to [video shortcode demo](#)

6. Blog

To create a blog please create a new page *Pages > Add New* and set up the title eg. *Blog*. In field *Template* leave default option on *Default Template*. In bottom section you will find *Page options* such as *Layout* and *Sidebar*. As you probably have guessed, you can choose whether your blog should be on full width or whether you want it with the sidebar (left or right). If you want blog with the sidebar you should also select the right sidebar for your page.

You can also add video for each post. In section *Post option*, under the *Visual/HTML* default editor you have some options to set. In this section you can set up **Vimeo** or **Youtube** video.

At the end please click *Publish* button on the right.

In the next step please go to *Settings > Reading > Front page displays > A static page > Posts page*, select page that you have already created and click *Save changes*.

We have created some features specifically for bloggers. You will find them in *Theme options panel > Getting started > Blog*. These options are set on default for each new post. Full description of options for blog can be found in section **Theme Options (section 4.1.3)**

Adding new posts works similar to standard WordPress *Posts > Add New*. Posts will be displayed on the already created page.

Images for posts we can add using *featured image*.

For more info about post creation please go to <http://en.support.wordpress.com/posts/>. You can also check the movie about how to create a post <http://www.youtube.com/watch?v=Sa4uimrgNz8>

7. Portfolio

To create a portfolio please start by creating a new page *Pages > Add New* and setting up the title eg. *Portfolio*. In field *Template* set the option *Portfolio template*. In the bottom section you also have *Page options* such as *Layout* and *Sidebar*. As you have probably guessed, you can select whether your portfolio should be in full width or whether it should be with a sidebar (left or right). If you decide on the portfolio with a sidebar you should also select the right sidebar for your page.

In *Portfolio* section you can also add videos from **Vimeo** or **Youtube** for each portfolio item. Please don't forget set up featured image for portfolio item when you are adding video.

We have created some options for *Portfolio page*. You can find them in *Theme options panel > Getting started > Portfolio*. More info about these options can be found in **Theme options panel (section 4.1.4)**.

Portfolio items are working just like typical post. To add a new portfolio please go to *Portfolio > Add new*. As you can see you choose similar options as for a blog. Additionally, in the bottom section of the page you have *Page options*. Here you can choose whether you want a full width portfolio or the one with a sidebar (left or right). When you choose the option with a sidebar **please don't forget to select the right sidebar** for this page.

You can also type *Excerpt* and select *Featured image*. After that please just click *Publish* button.

8. Menu creation

Menu creation works as in default Wordpress.

To add your own menus go to *Appearance > Menus*, type *Name* for your menu and click *Create Menu*. In next step, in section *Theme Locations* for position *Main menu* you need to choose a menu that you've just created.

Now you can add *Pages, Posts* and *Custom Links* from blocks located on the left. At the end you need to save it by clicking on *Save Menu*.

For more info about the menu creation please go to

<http://en.support.wordpress.com/menus>

9. Images

For this theme we used some images & icons available on the web.

Vectors in illustrations has been used from <http://www.pixeden.com/>

Some images has been also used from <http://www.flickr.com/photos/markjsebastian/> & <http://www.premiumpixels.com/>

Blog images:

<http://www.flickr.com/photos/76029035@N02/>

Portfolio images:

<http://www.flickr.com/photos/58842866@N08/>

Background images:

<http://www.sxc.hu/photo/902183>

<http://www.sxc.hu/photo/1340045>

<http://www.sxc.hu/browse.phtml?f=view&id=1120393>

10. SEO

In the era of what is happening in the search engines (especially *Google*) we implemented SEO option in our theme. We hope this will be very helpful for all of you.

To set up general options for SEO please go to *Theme options panel > Getting started > General* . You can set up here things like *Meta Description* or *Meta Keywords* for homepage (this is also default option for each new page).

If you are using *external SEO plugin* you can easily turn it off.

Of course you can also set up options like *Title, Meta Description* and *Meta Keywords* for each page in this theme. You can do it in *Pages > Add page > Page options*.

In section *Page Options* you can find fields like **SEO Title**, **SEO Description** and **SEO Keywords**. If you fill these fields, the page will adopt this values. If you leave this fields empty, the page will adopt default values that are in *Theme options panel > Getting started > General*.

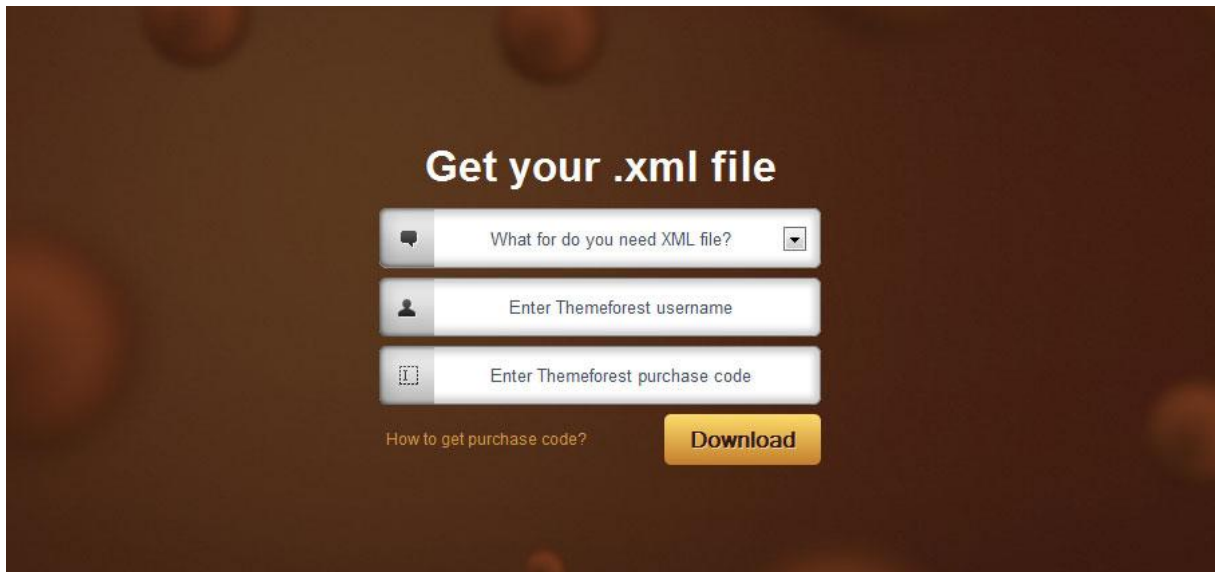

11. Support & contact with us

You can contact us in few ways. It depends on what you exactly need.

- **If you have got a questions about theme**, please place your question on forum <http://forum.muffingroup.com/bretheon> . Please note that we won't answer support question in comments or emails - we prefer to provide you with support on forum because your question can be helpful to other customers.
- Via comments you can send only presale questions or comment that is not related to support.
- **If you have a really big problem and really need to give us access to your account** (that is personal and can only be used by support) you can contact us by using contact form on **our profile's page on Themeforest** <http://themeforest.net/user/muffingroup> - in right bottom section of page.

There is no other way contact with us. So **please don't contact us by sending message on youtube, facebook or twitter** - because it's really difficult for us to control, your question could be lost in these communication channels.

12. XML file with demo content

The screenshot shows a dark-themed web form with the title "Get your .xml file". It contains three input fields: a dropdown menu labeled "What for do you need XML file?", a text field labeled "Enter Themeforest username", and another text field labeled "Enter Themeforest purchase code". Below the purchase code field is a link that says "How to get purchase code?". At the bottom right of the form is a yellow "Download" button.

To **download the XML file with demo content** please at first go to page: <http://themes.muffingroup.com/xmIs/>

In next step please select a product for which you need xml file (in this case please choose **Bretheon**). Please also paste your *themeforest username* and *purchase code*. Afterwards simply click "*Download*" and your file should start downloading.

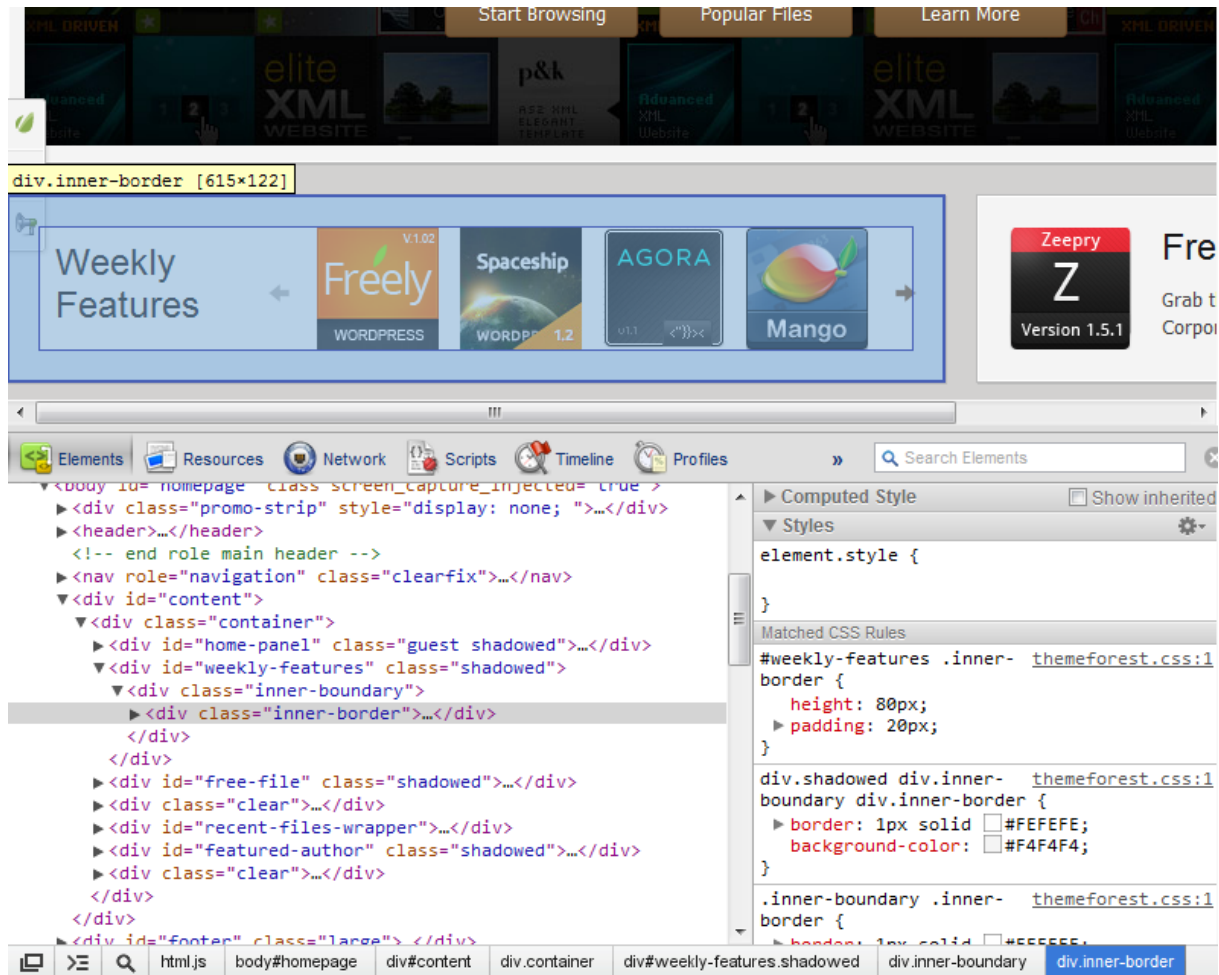

When you get this file onto your computer, you can import it into your wordpress (please import this file only after installing **Bretheon theme**). This video (<http://www.youtube.com/watch?v=OfTHYWEGhAc>) will show you how to import this file properly.

13. Advanced theme customization

Sometimes there is a moment when you want to change something on your site that is not available in theme options panel. Something like: font size, color, margin or any other customization. You don't have to ask us about all these things and wait for our response ever again. You can succeed in doing it on your own.

13.1 Google Chrome

To do it you can use two best tools available for free in your web browser. If you're using **Google Chrome** you can inspect element that you need to change by "Inspect element". To do it just hover mouse on element and click "Inspect element". After that you'll see something like on screen below:

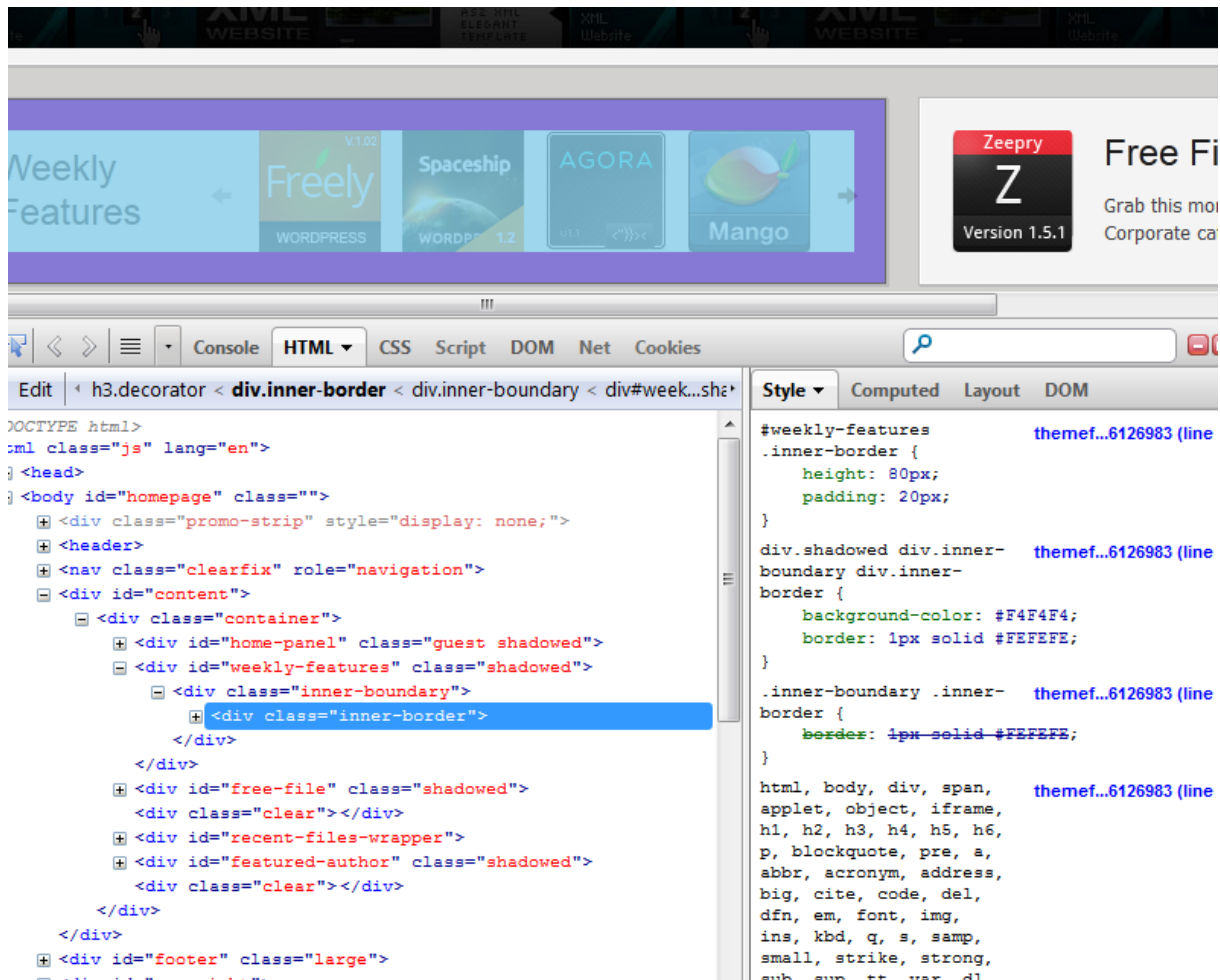

As you can see on the image, on the left side there is a list of styles used for each class/id. If you want to change something, you can edit it on the screen and see how the elements look like. If everything is good and you want to make the same changes on your site please copy right styles from box of right side, for example:

```
#weekly-features .inner-border {  
  
    height: 80px;  
    padding: 20px;  
  
}
```

and paste this code into: *Theme options > Styles > Custom CSS code*. If you want to paste this code instead of Custom CSS code you can do it in *custom.css* file. The result will be identical. It's up to you to decide on which way to use.

13.2 Firebug for Firefox

Apart from Google Chrome, we also suggest to use **Firebug for Firefox**. In contrast to Google Chrome, Firebug must be installed at first before you can use it. To do so please click **Firefox in the left top corner > Add-ons** and then search for Firebug and install it. When you get it into your browser you can use it the same way as with Google Chrome but instead of clicking "*Inspect element*" please click "*Inspect element with Firebug*". On the screen below you can see that it will look very similar to Inspect element in Google Chrome.

As you can see on image, on the left side there is a list of styles used for each class/id. If you want to change anything you can edit it on the screen and check what elements look like. If everything is good and you want to make the same changes on your site please copy right styles from box of right side, for example:

```
#weekly-features .inner-border {  
  
    height: 80px;  
    padding: 20px;  
  
}
```

and paste this code into: *Theme options > Styles > Custom CSS code*. If you want to paste this code instead of Custom CSS code you can do it in *style.css* file. The result will be identical. It's up to you to decide on which way to use.

As you can see, it's not difficult to use it and with the support of this tool you can save a lot of time, so we encourage you to try to do it as described and enjoy your new skills.
