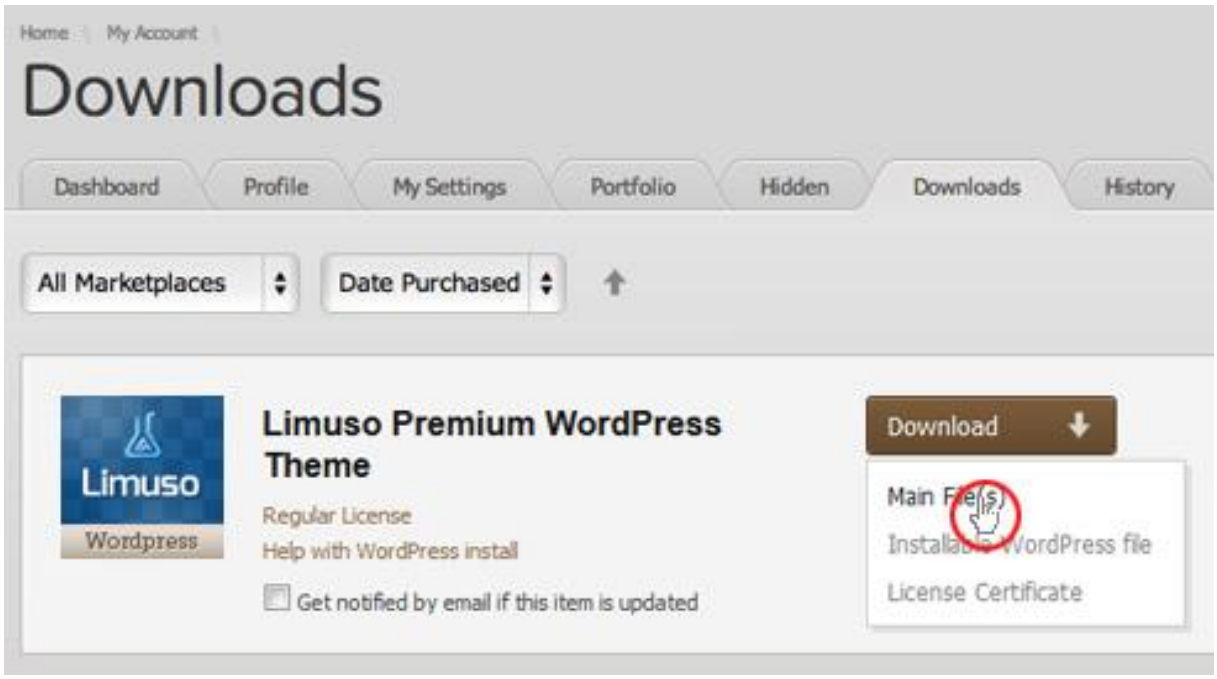
1. General info & Installation

1.1 Few words on start

Our new theme called **"Limuso"** is especially delivered for all those who prefer to manage all elements on the page. Here you will find things like content builder, shortcodes, revolution slider or detailed theme options panel. Be sure that with our new theme you can easily customize whatever you want on your page. Please also note that all this options are amazingly easy to use.

1.2 Package from themeforest

At first, after purchasing this theme please download the package from Themeforest. All you need to do that is move your mouse over your login name **in right top corner** (of course after you`re logged in Themeforest) and then click **Download**. Here you will find all the items that you have purchased. It looks exactly just as the diagram below:



In the next step click the **Download** button next to Limuso theme and save package on your computer.

In the package you can find things like *documentation*, *license, psd files, zipped file with theme files* and folder with theme files called **Limuso**. Please unpack the whole package after downloading it from Themeforest.

1.3 How to install & update it?

At first please make sure that you have unpacked the whole package shown in the last point. **This is very important!** You can complete installation in two different ways:

1. **WordPress Theme Manager** - plase go to **Appearance > Themes > Install Themes > Upload**, select zipped theme folder called "limuso.zip" and press *Install Now* button. The wordpress will do the rest for you.

2. **FTP upload** - upload non-zipped theme folder called *limuso* to */wp-content/themes/* folder in your WordPress installation folder on your server.

In the second part of this guide we have described how to update **Limuso**. Please make sure that you didn`t make any changes in the files. If you have made changes and you don`t want to lose them, the best way is to use one of freeware tools for comparing files, ex. Beyond Compare (we are not the authors of this tool so please don`t ask us how to use it. Answears to how to use it can be found on their website). After comparing these files you can upload on server only the files that hasn`t been changed.

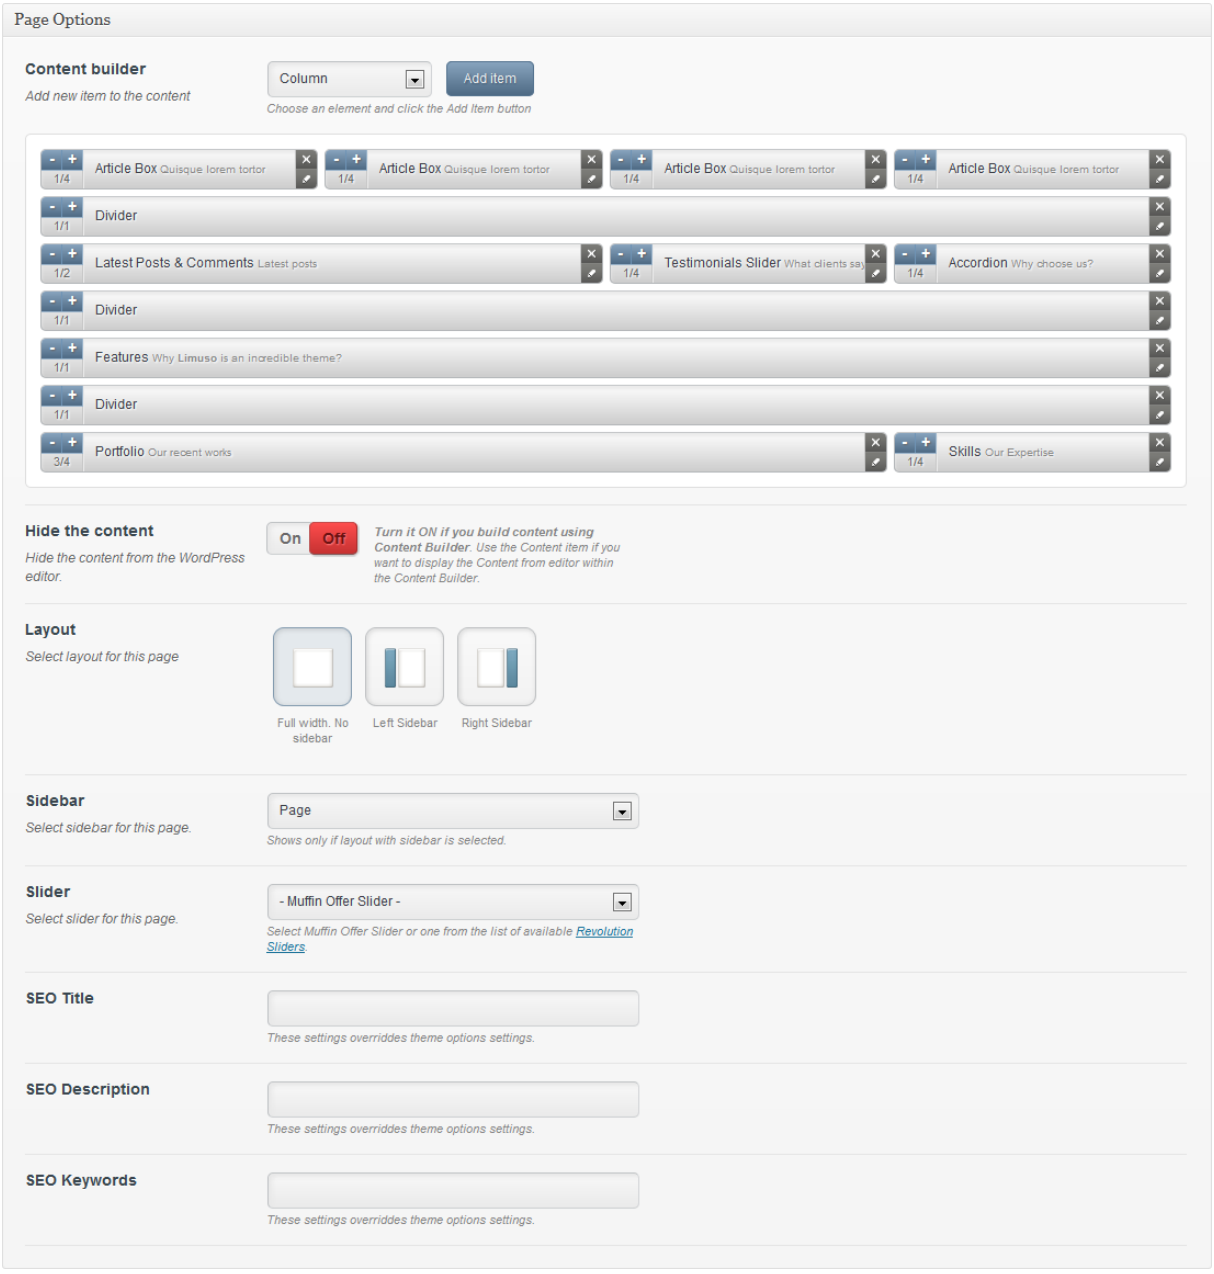
If you haven`t changed any theme files, all you need to do is update your version of theme by downloading the latest package from themeforest, unpacking files and uploading new files on the server while replacing the old files. Simply overwrite them.

All your data in the database are safe because after updating theme files doesn`t change anything in the database. Please however always make a backup of your files & database.

2. Page creation

Creating your own page has been never so easy. To make the first step please go to *Pages > Add new*. On first sight everything looks just like in default wordpress. But when you have a look under *Visual/HTML* area you will see some *Page options*.

2.1 Getting started



In first *Visual/HTML* area you can build your page using all available options in editor. Beyond the default options we included green button called "*Insert shortcode*". With this option you can build any page you want based on shortcodes. All available shortcodes for this theme has been described in section **Shortcodes (section 5).**

Please note that you can build page based not only on shortcodes. You can also use Content Builder (section 2.2).

Below the **Content Builder** you can find some *Page Options*.

- **Hide the content** - this options will hide the content from Wordpress editor. You can turn this button on or off. If you`re using Content Builder for building content please turn this button off. If you won`t turn it off, the content from Wordpress editor will show above the Content Builder items.

- **Layout** - you can choose personal layout for each page. There is 3 options to choose: full width without sidebar, left sidebar or right sidebar.

- **Sidebar** - here you can select proper sidebar for this page (of course if in the previous option you have selected right or left sidebar). You can create your own sidebars in *Appearance > Limuso > Getting started > Sidebars.*

- **Slider** - you can select Muffin offer slider or one of the Revolution Slider's for page. Please also note that for each page can be different slider. Of course, before select slider you need to create it with amazing **Revolution Slider (section 3).**

- **SEO Title** - title for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)

- **SEO Description** - description for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)

- **SEO Keywords** - keywords for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)

After set up all this options on right side you can also choose right Page Template (section 2.3) for this site.

2.2 Content Builder

What about **Content Builder**? With his help web development is child's play. At first please choose an item that you need on page.

Afterward select one of the items please click *Add item* button. After that you will see the right Item already added below. You can do few things with this added Item.

- Expand Item to 1/4, 1/3, 1/2, 2/3, 3/4, 1/1 by using "+" button in the Item. The same way you can shorten this Item using "-" button. Please note that not all Items working with all sizes.
- You can delete Item if you don`t need it by × in right Item corner.
- You can edit each Item by click on "pencil" in right bottom corner in the Item.

Portfolio
This template let you to add Portfolio for website. You can see these entries in section *Portfolio > Portfolio*.

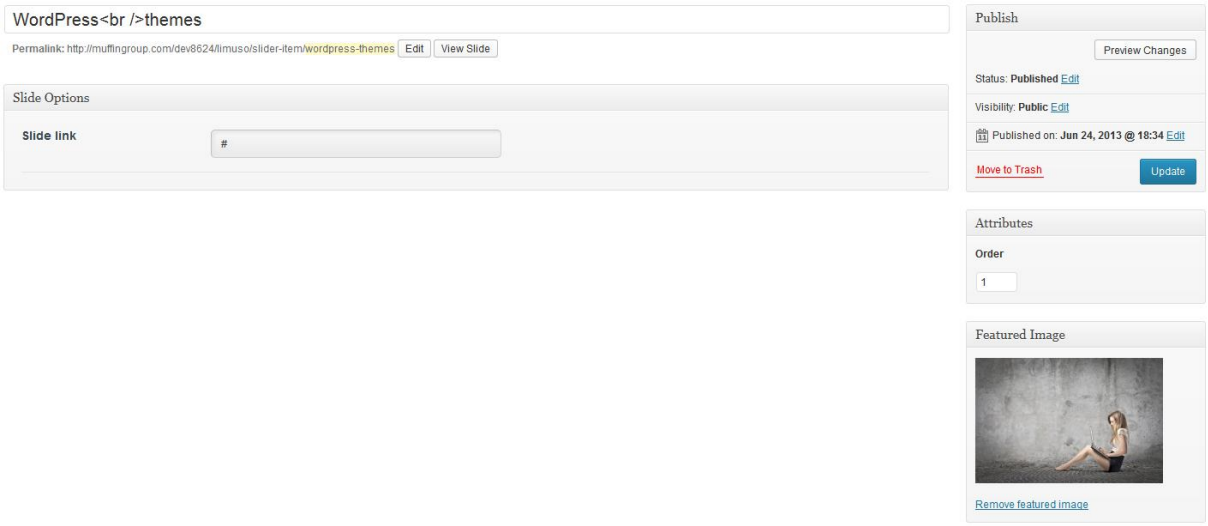
Sitemap
This template let you to create sitemap page.

3. Slider options

3.1 Offer slider

Creating and managing a slider is really easy. You can do it in just few minutes.

3.1.1 How to set it up



If you want to add new slide into your theme please go to *Slider Offer > Add new*. As you can see there is not to much options.

- The first input is the main (largest) text for slide

Below this large input there are *Slide Options*. Just one option is available here:

- **Slide link** - type link for this slide

You also need to set *featured image* that can be set up on the right side. After that just click "*Publish*" button.

Remember that you can add as many slides as you want.

3.1.2 What options are available?

You can set up some options for slider to adjust it to your needs. To do it please go to *Theme options > Getting started > Sliders*.

3.2 Revolution Slider

3.2.1 Getting demo slider

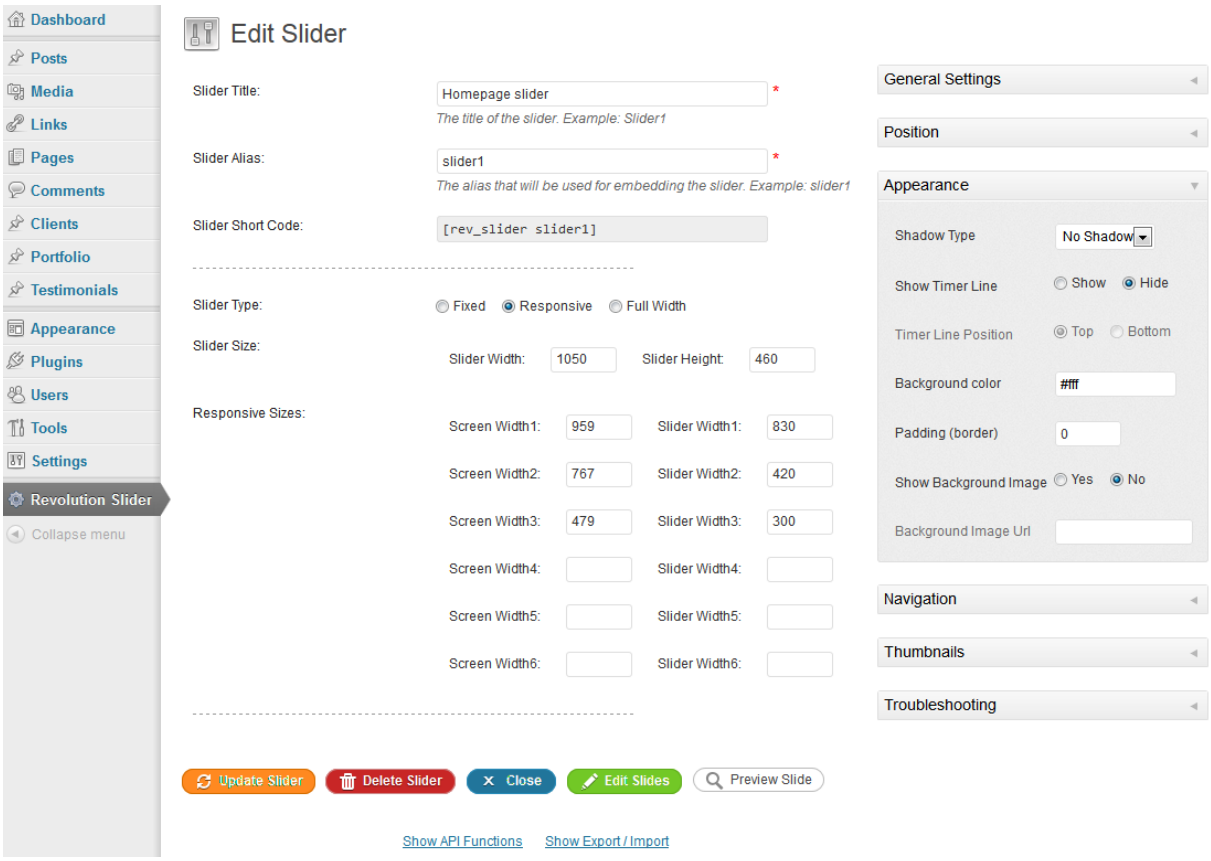
In package downloaded from Themeforest you can find **slider-demo** folder that has included *uploads* folder and *slider1.txt* file. In first step please upload content from uploads folder to your *wp-content/uploads* folder. In next step you need to go to **Revolution Slider**, click button "*Create new slider*" and fill below fields:

Slider Title: Slider 1

Slider Alias: slide1

In next step please click "*Create Slider*" button.

On the list of available sliders, click on slider that you already created and in the bottom section you will see "*Show Export / Import*" link. After that you will get field to select file. You need to choose *slider1.txt* file in this step and click "*Import Slider*" button.



3.2.2 Slider management

After pressing the "*Create New Slider*" button you will reach a form where you are asked to enter a *Slider Title* (used for the Slider overview in this backend) and a *Slider Alias* (a slug that is used to implement the Slider in your WP later, so keep it simple with no spaces and special chars).

You are also prompted to enter the *Sliders Basic Settings*, a *Slider Title* (for you to remember the Slider by) and a *Slider Alias* (please do not use special characters or spaces here, this defines the shortcode for you to use in your content).

The options in the boxes on the right side (General Settings, Position, Appearance, Navigation, Thumbnails) have helping Tooltips on mouseover so they are not explained here.

The Slider Type can be fixed (not responsive, fix dimensions), responsive (changes depending on the size of its max. sizes given later in relation to the screen size) or fullwidth (always 100% in width of the screen size, but height keeping the aspect ratio).

The Sizes section is needed to fit the slider in all screen sizes needed. The height of the slider will always be calculated to keep the aspect ratio from the max width and height given in the Slider Size line.

The next step is creating/editing slides. You get there by just clicking on "*Edit Slides*" in the Slider Form window.

Just press "*New Slide*" and the native WP Media Upload dialog window will appear. Choose or Upload the slide's background image, choose "*Full Size*" and then "*Insert Into Post*" (all like you are used to it in your WP editor). You can always click on the pic to change it.

Use the arrow handles on the right side to change the slides position in the slider (top to bottom = first to last slide to be shown) or delete it with the "*Delete*" button.

The "*Edit Slide*" leads you to the next chapter "*Slide*".

In the "*Edit Slide*" view you see the heart of our plugin. The drag&drop Caption editor.

But first please note that you have another chance here to change the background image with the "*Change Image*" button.

To create a Layer (Caption, Image or Video) press the button "*Add Layer*" or "*Add Layer: Image*". In case of a text layer a basic layer will be created you can use the "*Text*" field in the Layer Params to change the caption on it. The "*Style*" selectbox shows some basic styles (CSS classes) you can use to style the caption (you can always add own CSS classes to this field or edit the existing ones via the "*Edit CSS File*").

In case of an Image Layer you will see the native WP Media Uploader again. In case of a Video Layer you will prompted to a custom Video selection wizard.
You now can move the Layers around via drag&drop or type in the x and y coordinate in the corresponding fields.

The "*Layers Sorting*" drag&drop list determines the Layers' z-index. This list specifies the stack order of an element.

An element with greater stack order is always in front of an element with a lower stack order.

Please also note that slider is a plugin and whole documentation for this item you can find in *documentation/revolution-slider-documentation* folder in package downloaded from themeforest.

Remember: please set up chmod on 777 on below folders to show slider thumbnails and for possibility to edit CSS styles for slider in admin panel.

wp-content/plugins/revslider/cache
wp-content/plugins/revslider/rs-plugin/css

NOTE! In default Revolution Slider version included into theme you will get all our styles for plugin. After update plugin to newer version, please do not forget to copy slider styles from */revolution-slider-demo/captions.css* (this folder is included into TF package*)* to */wp-content/plugins/revslider/rs-plugin/css/captions.css*

4. Theme options panel

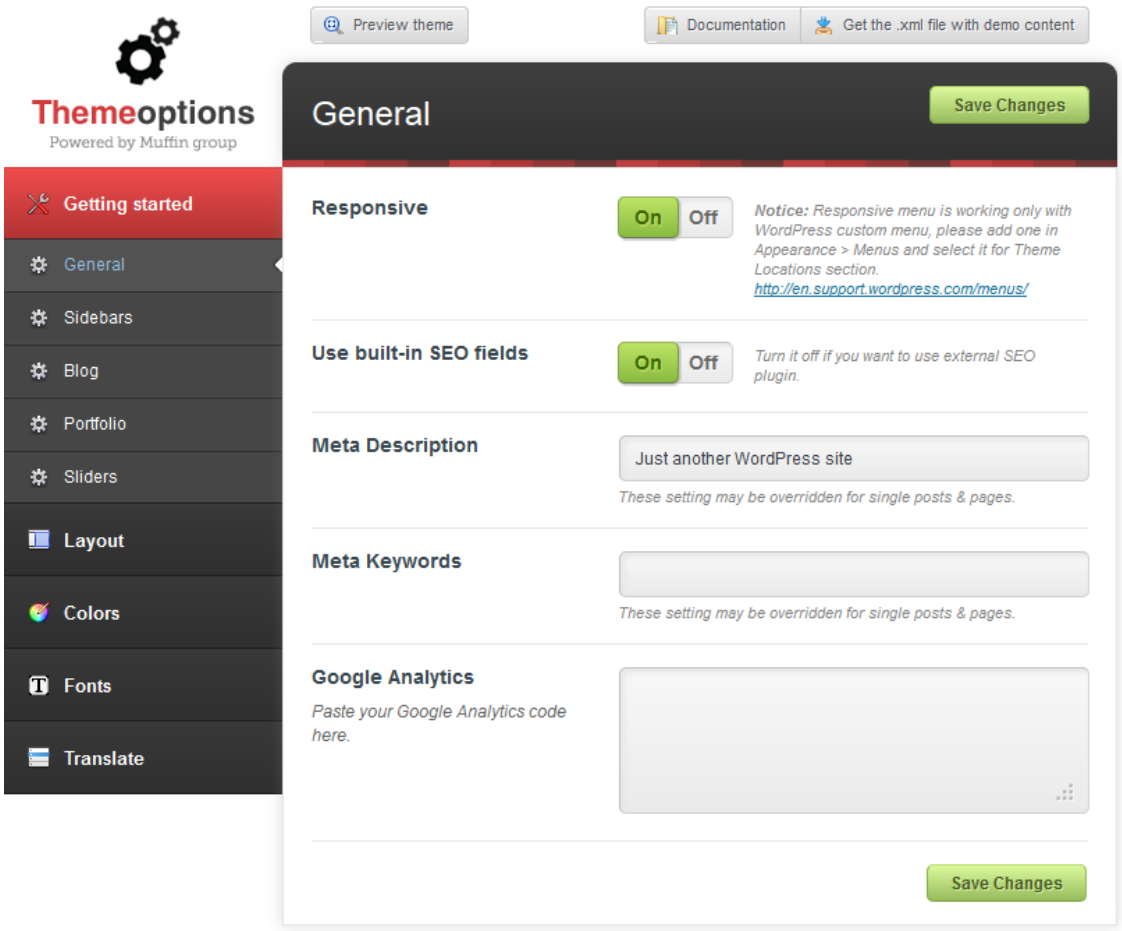
Theme options panel has been especially created to make your work faster and easier. Using it is very easy and in just a few minutes you can change a lot of things on your page.

4.1 Getting started

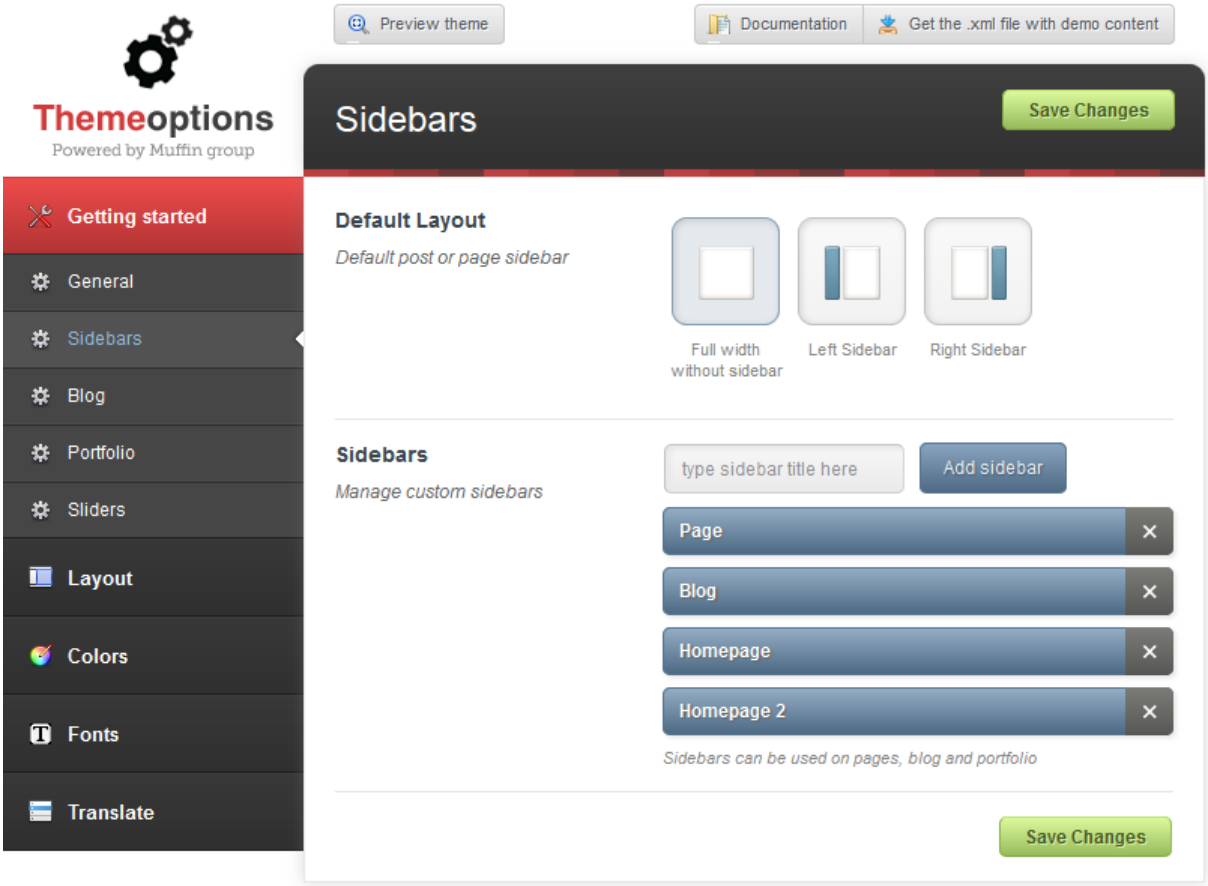
4.1.1 General

In this section you can set up some general options for your site. You can find here things like *Google Analytics, Responsive version*, etc. Please check below options available in this section:

- **Responsive** - choose if you want to use responsive version or not.
- **Use built-in SEO fields** - if you are using external SEO plugin you can easily turn off built-in SEO option.
- **Meta Description** - this is meta description for homepage but it`s also default description for each page added in *Pages* section.
- **Meta Keywords** - this is meta keywords for homepage but it`s also default keywords for each page added in *Pages* section.
- **Google Analytics** - paste your Google Analytics code to track your site.



4.1.2 Sidebars

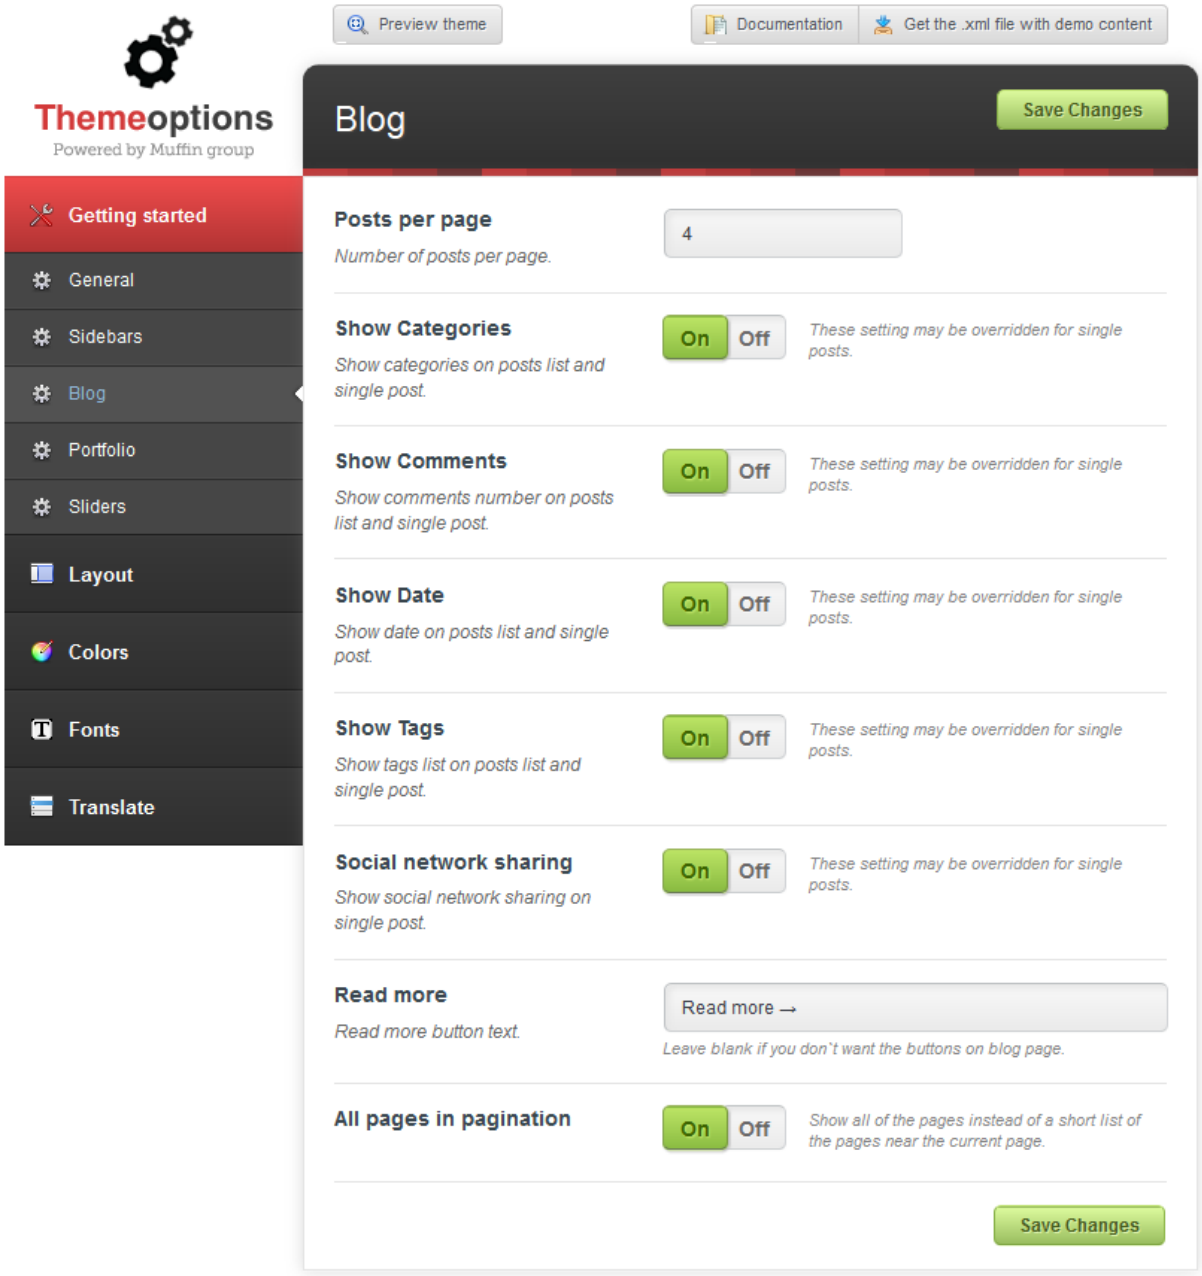


This is default option for pages and posts. Here you can set whether your post or page should have full width or maybe include a sidebar (left or right). For example when you choose *Left sidebar* each of your pages or post that you will create will have left sidebar. **Of course, this is only default option and while creating page or post you can set up your own layout.**

You can also manage your Sidebars here. You can add new and delete existing one.

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.1.3 Blog



Here you can find some options for blog page. This is of course a default option for new pages. You have got the following options for blog:

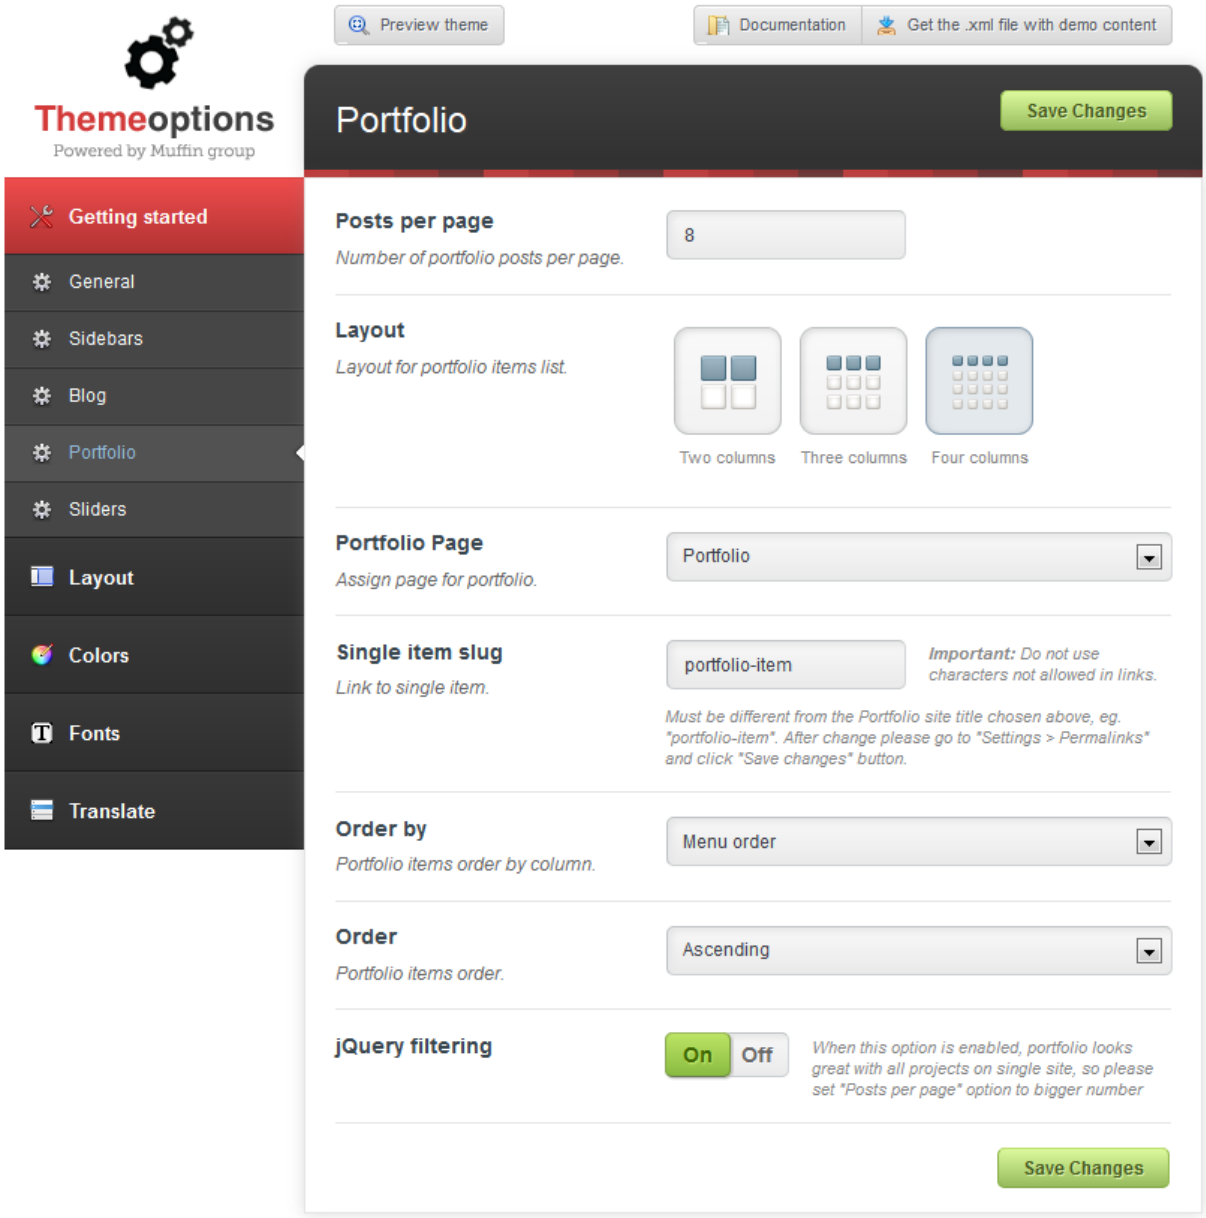
- **Posts per page** - you can select how many posts should be on page.
- **Show categories** - this option will show categories on posts list and single post when it is on.
- **Show comments** - this option will show comments number on posts list and single post when it is on.
- **Show date** - this option will show date on posts list and single post when it is on.
- **Show tags** - this option will show tags on posts list and single post when it is on.

- **Social network sharing** - this option will show social network sharing on single post when it is on.
- **Read more** - text for Read more button.
- **All pages in pagination**- here you can choose if you want to show all of the pages insted of a short list of the pages near the current page.

All of this options except *Posts per page* can be changed for each post.

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.1.4 Portfolio

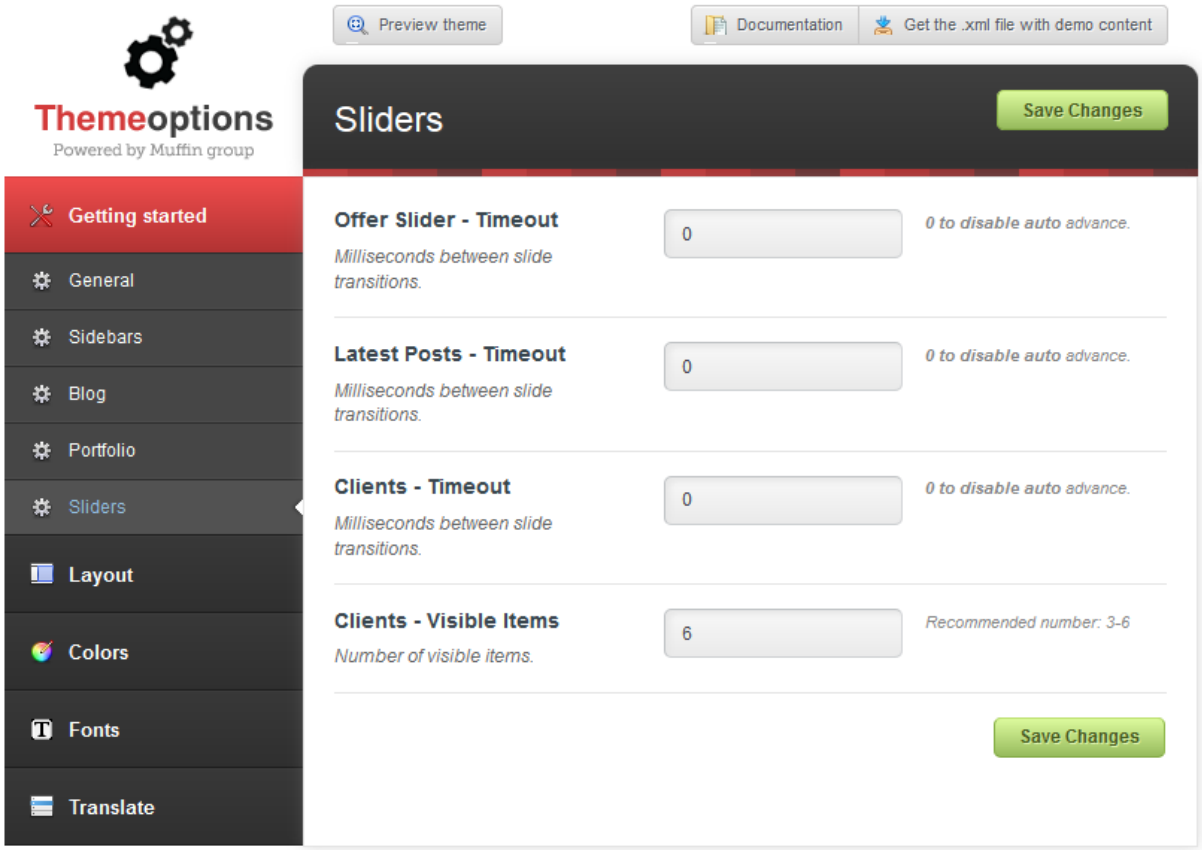


This option will certainly be very helpful in creating your portfolio page. Here you can set the following options:

- **Posts per page** - this is the number of portfolio posts per page.
- **Layout** - you can choose what layout will be the best for your portfolio (one, two, three or four colums)
- **Portfolio page** - here you can select the right page for portfolio from list of all created pages. You need to choose a page for that because the theme applies info such a layout, sidebar and link to page in breadcrumbs.
- **Single item slug** - this is a link to single item. After changing that option please go to "*Settings > Permalinks*" and click *"Save changes*" button.
- **Order by** - you can select what should be used to sort your portfolio.
- **Order** - you can choose how your portfolio should be ordered (ascending or descending).
- **jQuery filtering** - you can choose if you want to filter portfolio items using jquery plugin to make your portfolio look much better.

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.1.5 Sliders



This option will certainly be very helpful in creating slider offer on page. Here you can set the following options:

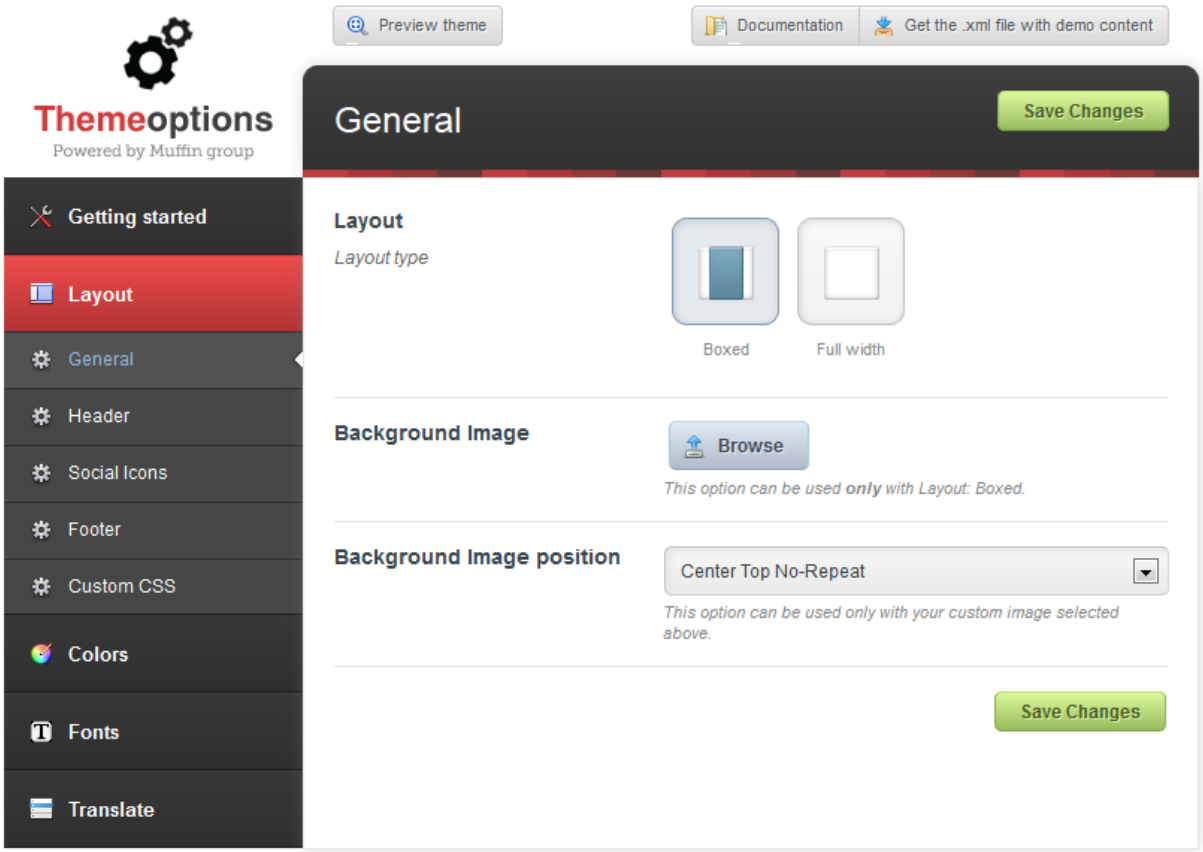
- **Offer Slider - Timeout** - time in miliseconds between slides transitions for Offer Slider.
- **Latest posts - Timeout** - time in miliseconds between slides transitions for *Latest posts* item.
- **Clients - Timeout** - time in miliseconds between slides transitions for *Clients* item.
- **Clients - Visible Items** - number of items to show for *Clients* item.

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.2 Layout

In this section you can set up some layout options such as social icons or logo.

4.2.1 General

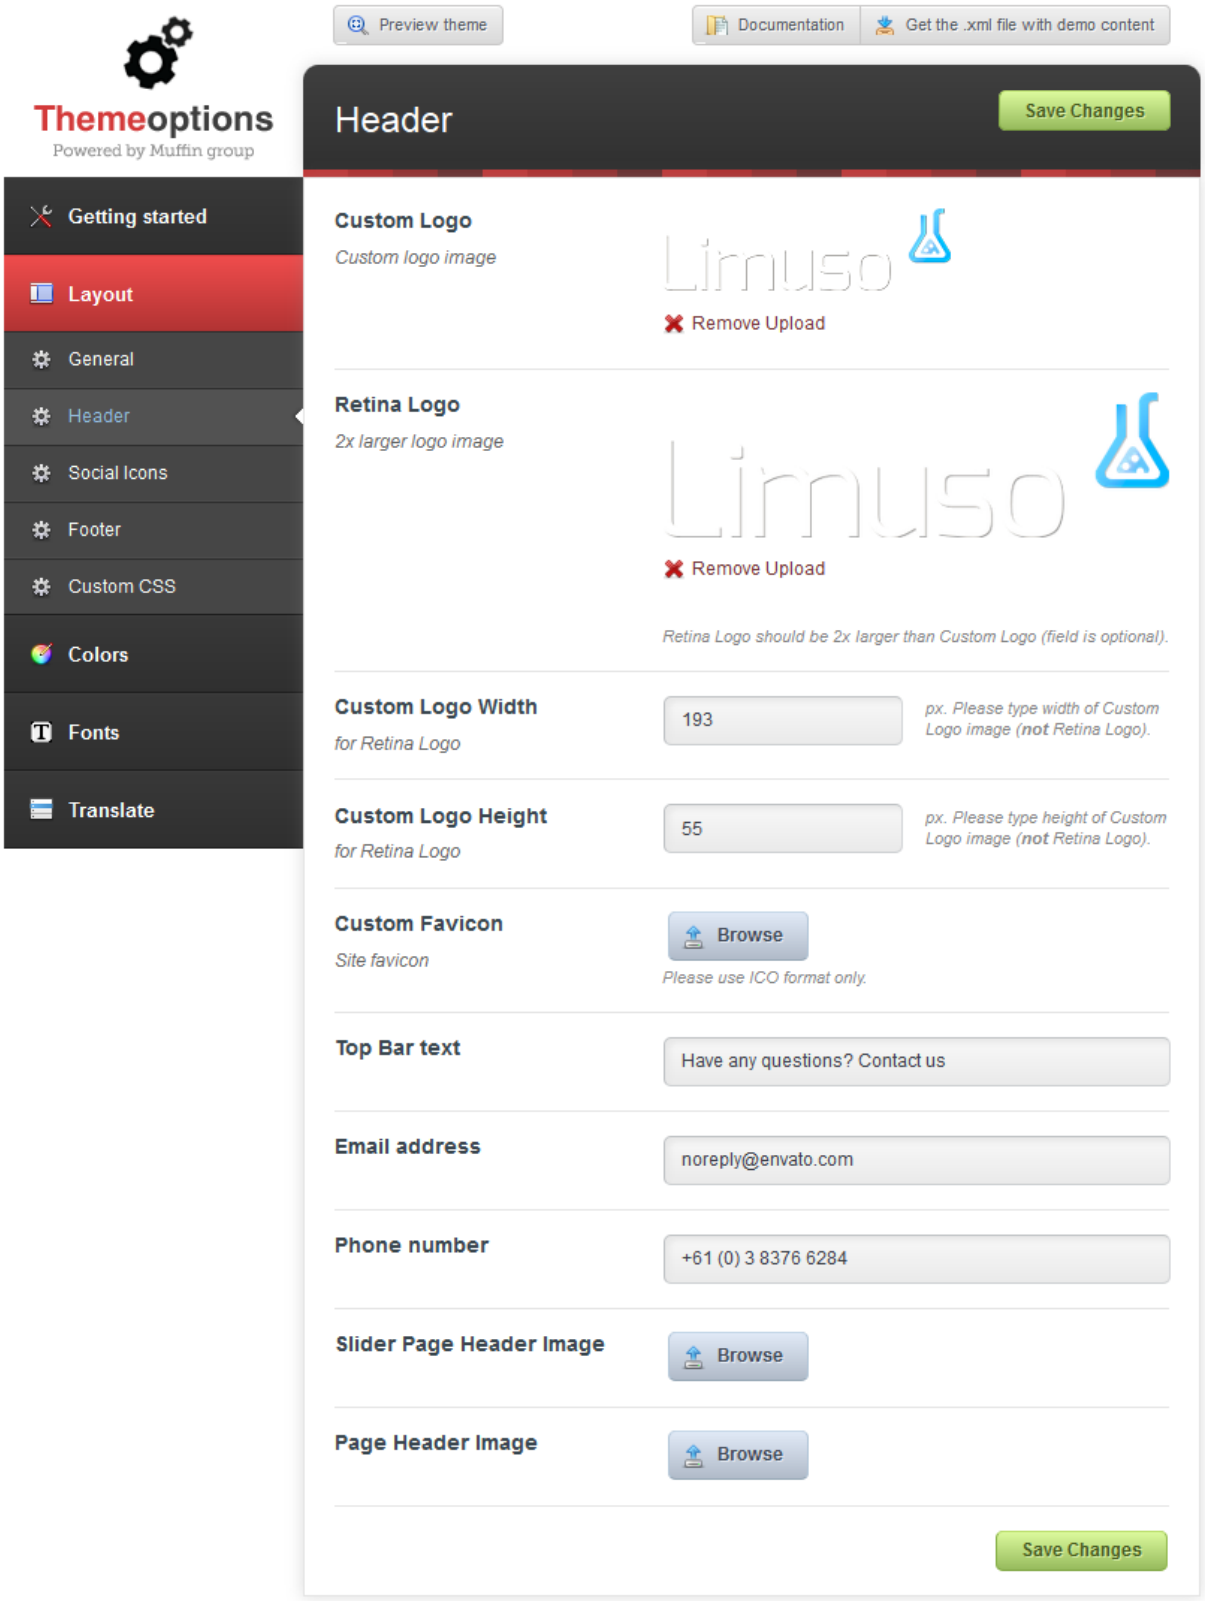


This section is created for header. Here you can set up some options like:

- **Layout** - choose between Boxed or Full width layout.
- **Background Image** - set up own background image
- **Background image position -** choose position for your background image

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.2.2 Header



Here you can set up some options for logos, header and much more. Below we will describe all of them.

- **Custom logo** - choose your custom logo image
- **Retina logo** - choose your retina logo image (should be 2x larger than Custom Logo)
- **Custom logo width** - width used for Retina logo (type width that your custom logo have in original)
- **Custom logo height** - height used for Retina logo (type height that your custom logo have in original)
- **Custom favicon** - choose your custom favicon image

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

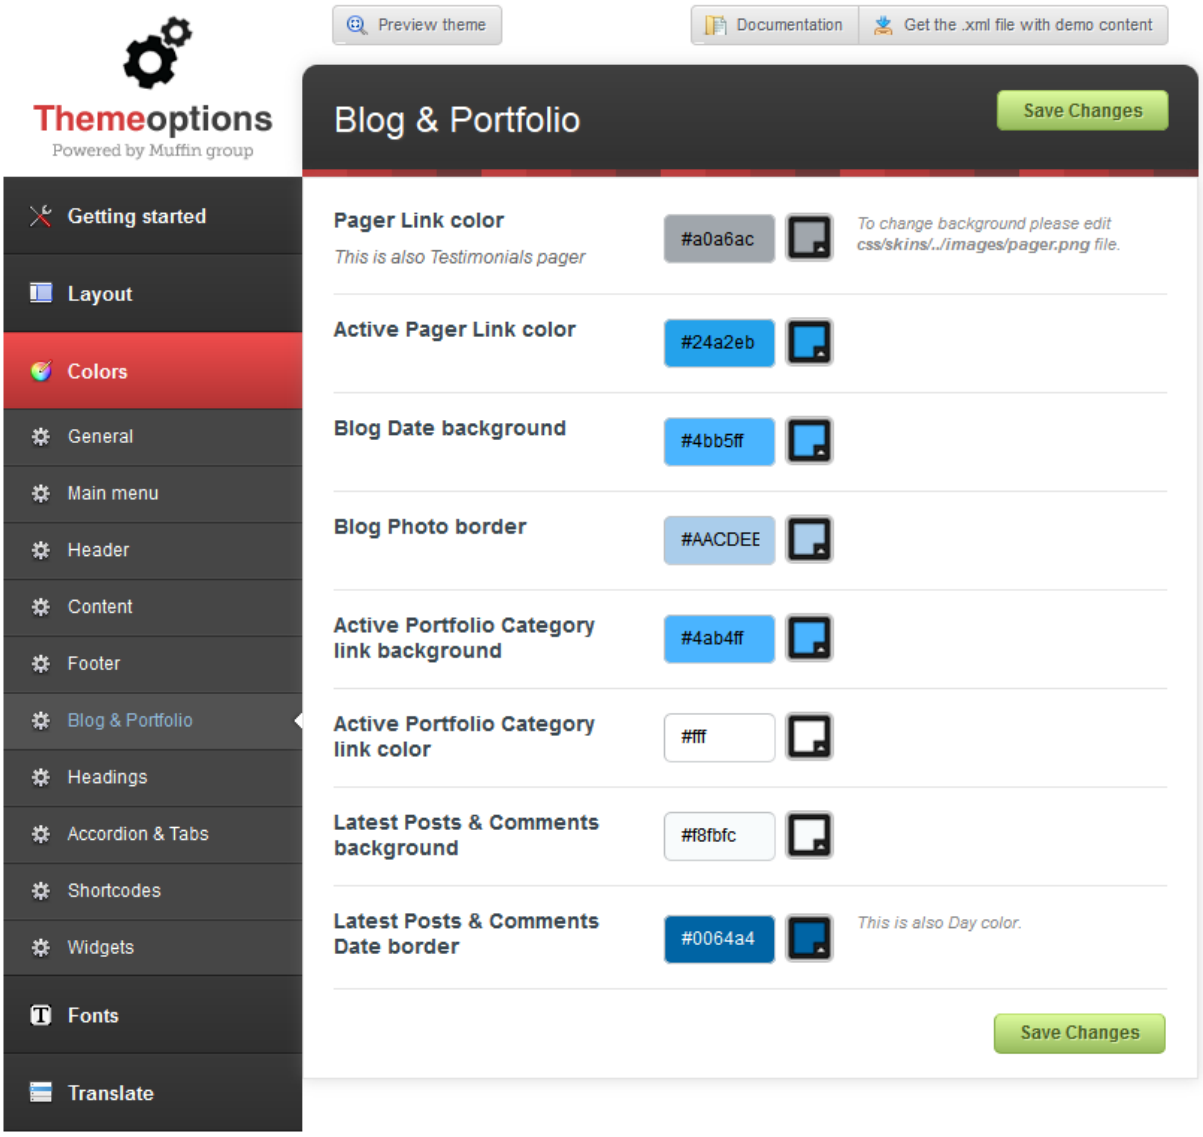
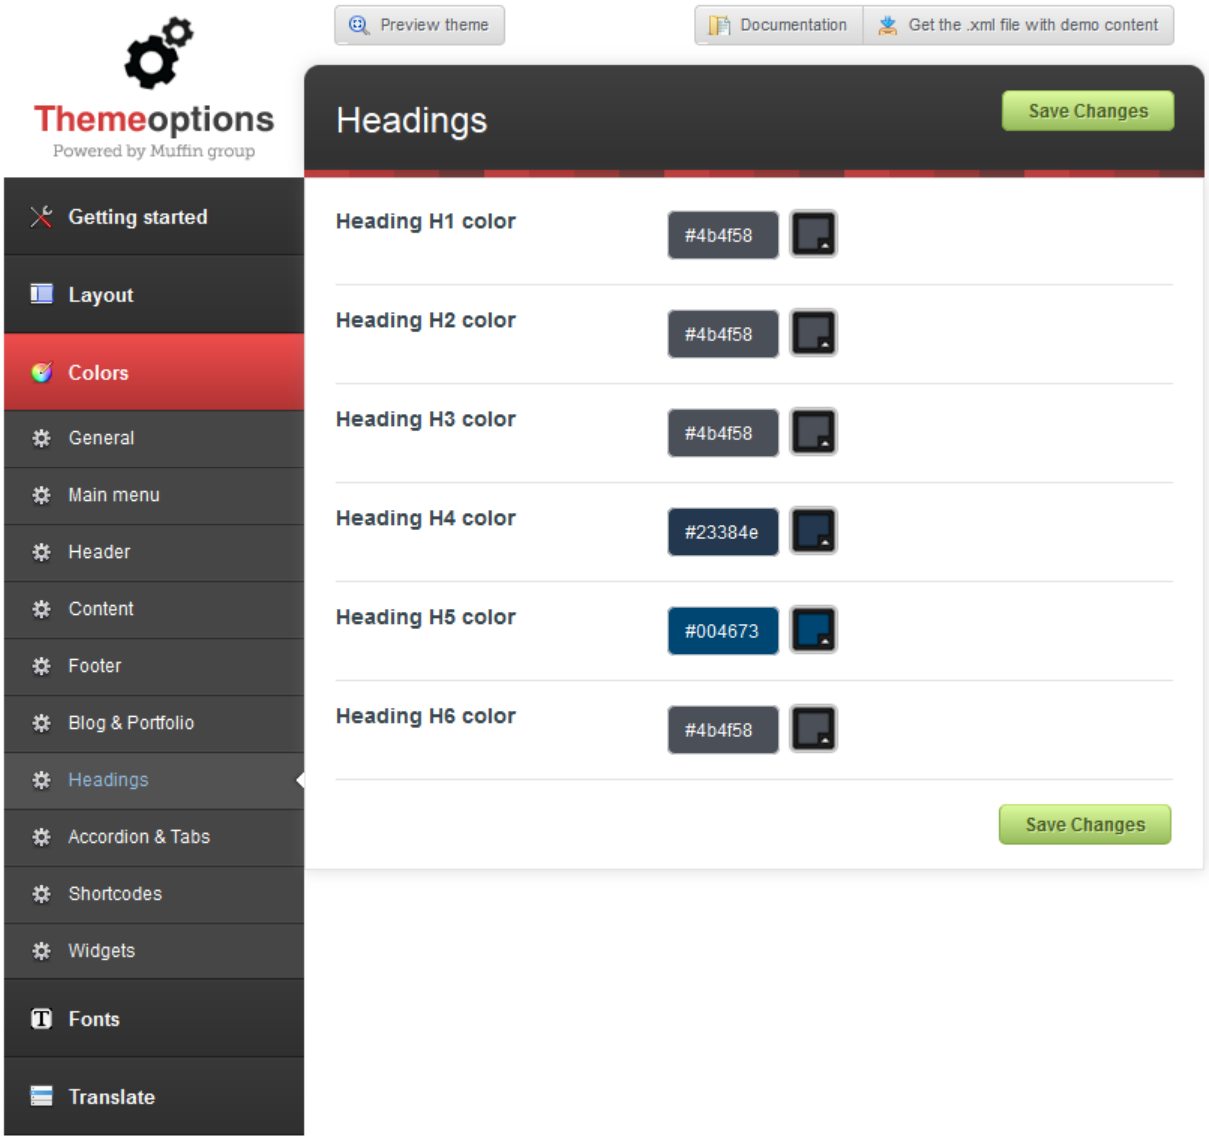
4.3.6 Blog & Portfolio



- **Pager Link color** - link color for pager
- **Active Pager Link color** - link color for pager on active
- **Blog Date background** - background color for date on Blog page
- **Blog Photo border** - border color for photo on Blog page
- **Active Portfolio Category link background** - background color for category on portfolio page when active
- **Active Portfolio Category link color** - link color for category on portfolio page when active
- **Latest Posts & Comments background** - background color for Latest Posts & Comments
- **Latest Posts & Comments Date border** - border color for Latest Posts & Comments Date

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

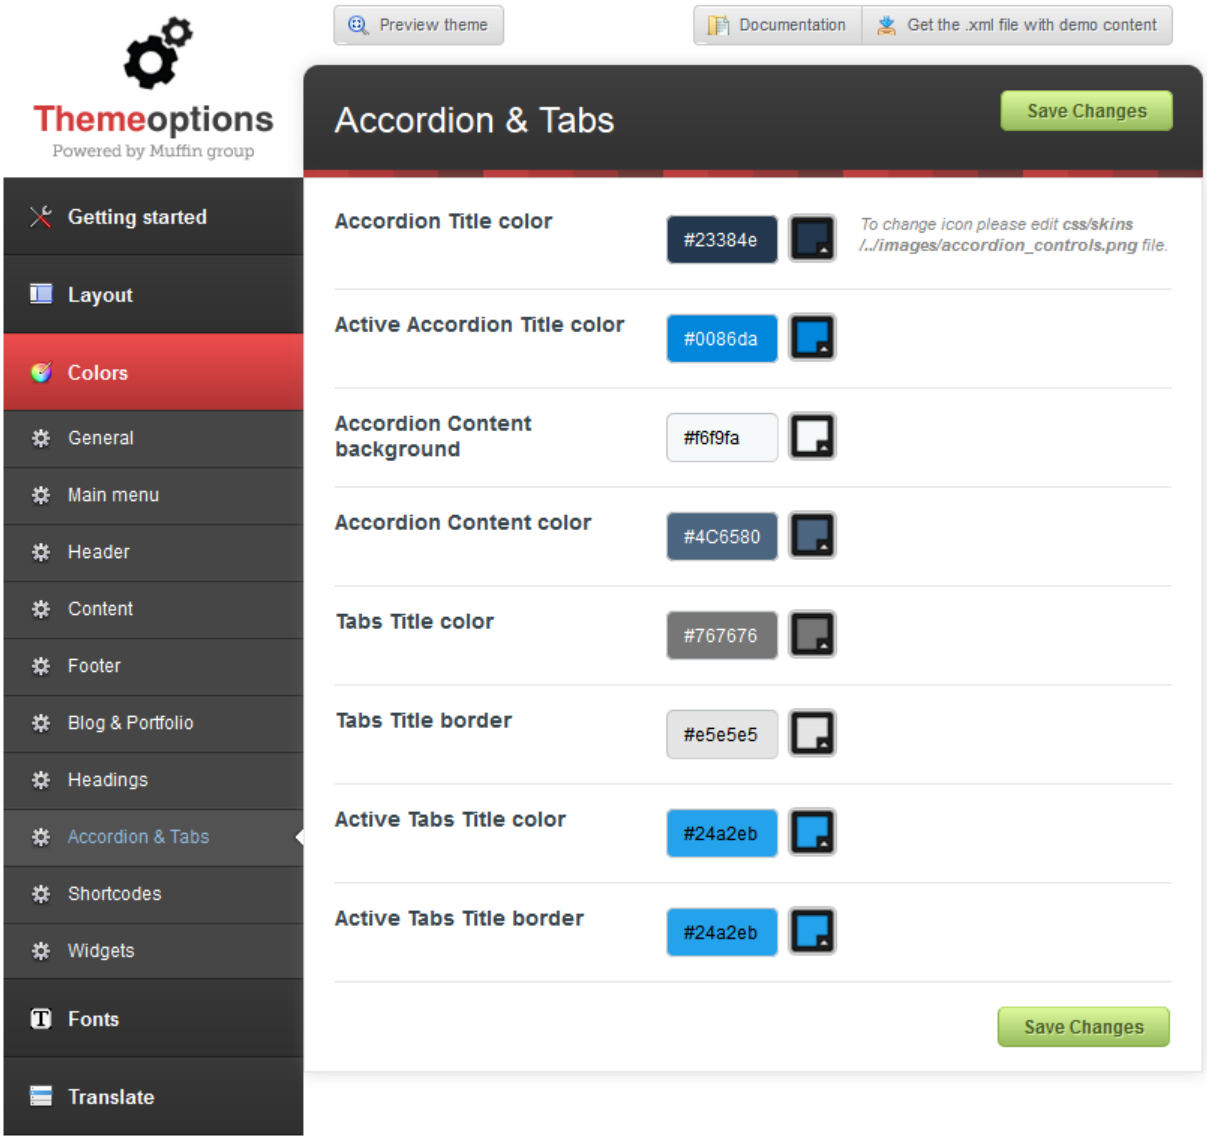
4.3.7 Headings



- **Heading H1 color** - text color for h1 (Subpages header title font color)
- **Heading H2 color** - text color for h2
- **Heading H3 color** - text color for h3
- **Heading H4 color** - text color for h4
- **Heading H5 color** - text color for h5
- **Heading H6 color** - text color for h6

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

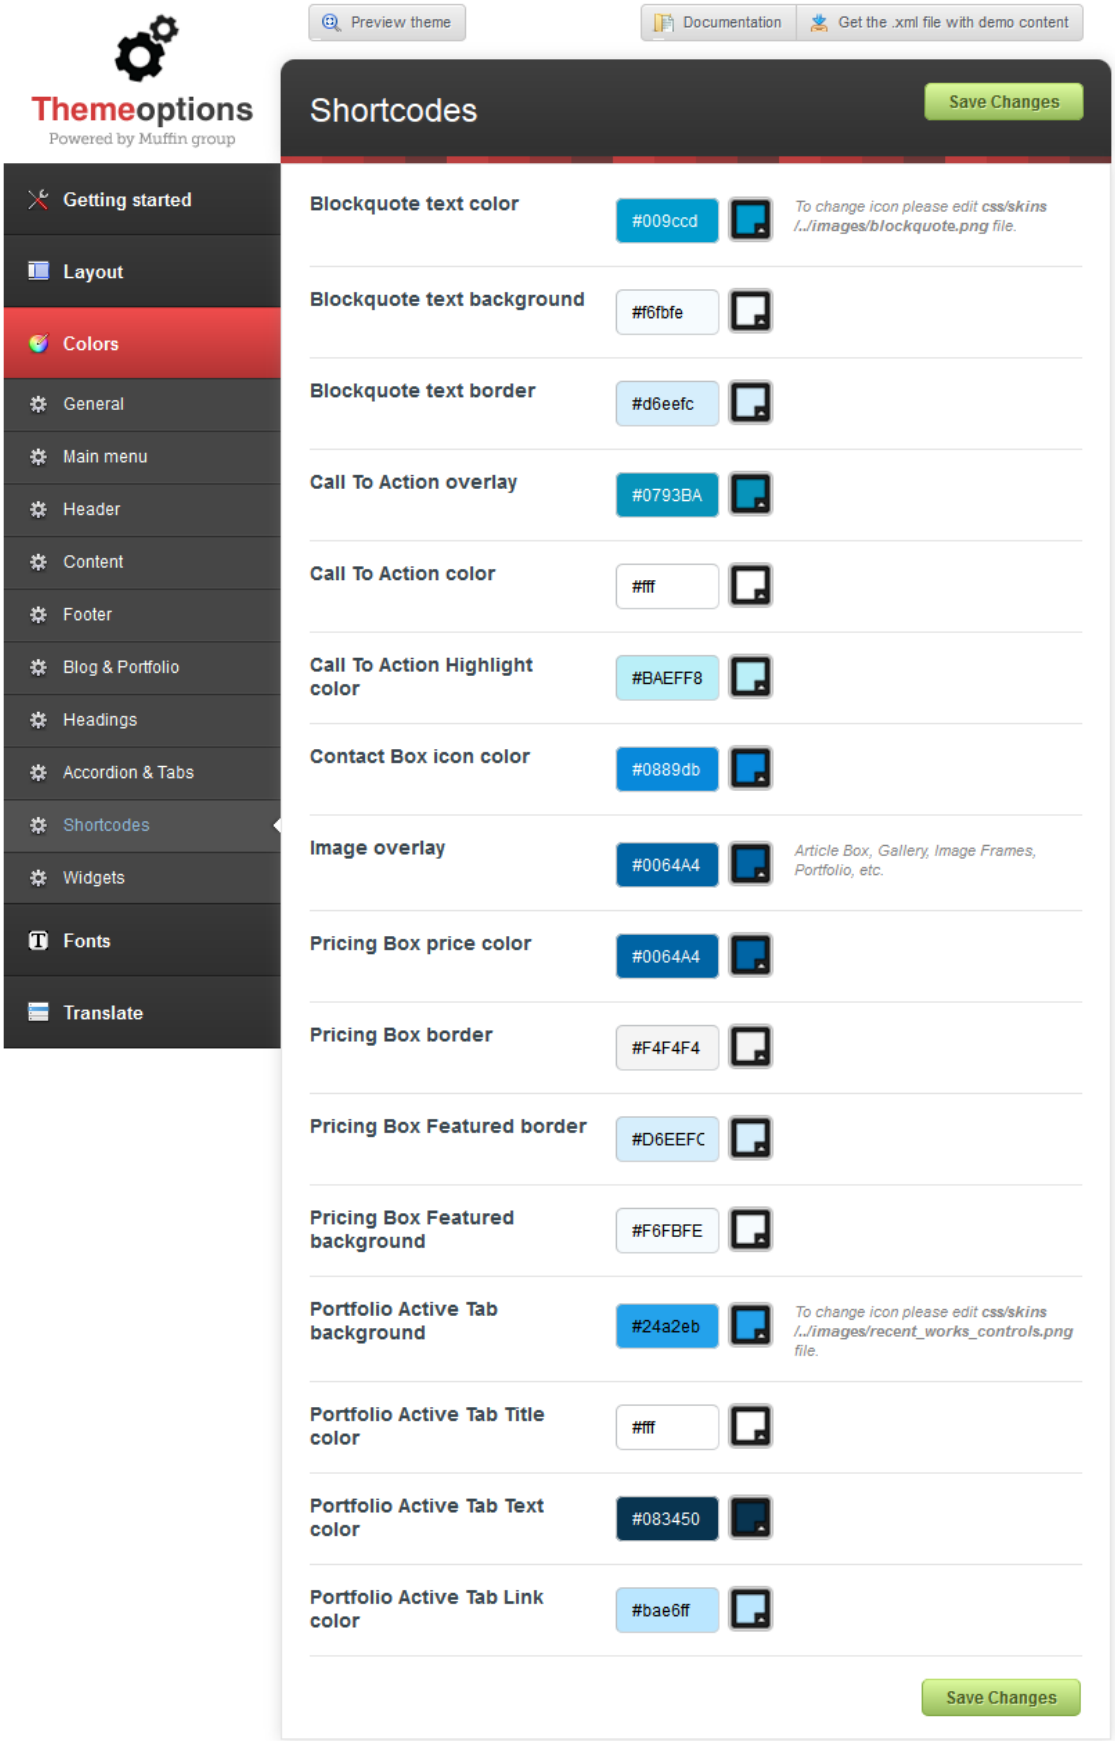
4.3.8 Accordion & Tabs



- **Accordion Title color** - title color for Accordion
- **Active Accordion Title color** - title color for accordion when active
- **Accordion Content background** - content background color for Accordion
- **Accordion Content color** - content color for accordion
- **Tabs Title color** - title color for Tabs
- **Tabs Title border** - title border color for tabs
- **Active Tabs Title color** - title color for active tabs
- **Active Tabs Title border** - title border color for tabs when active

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

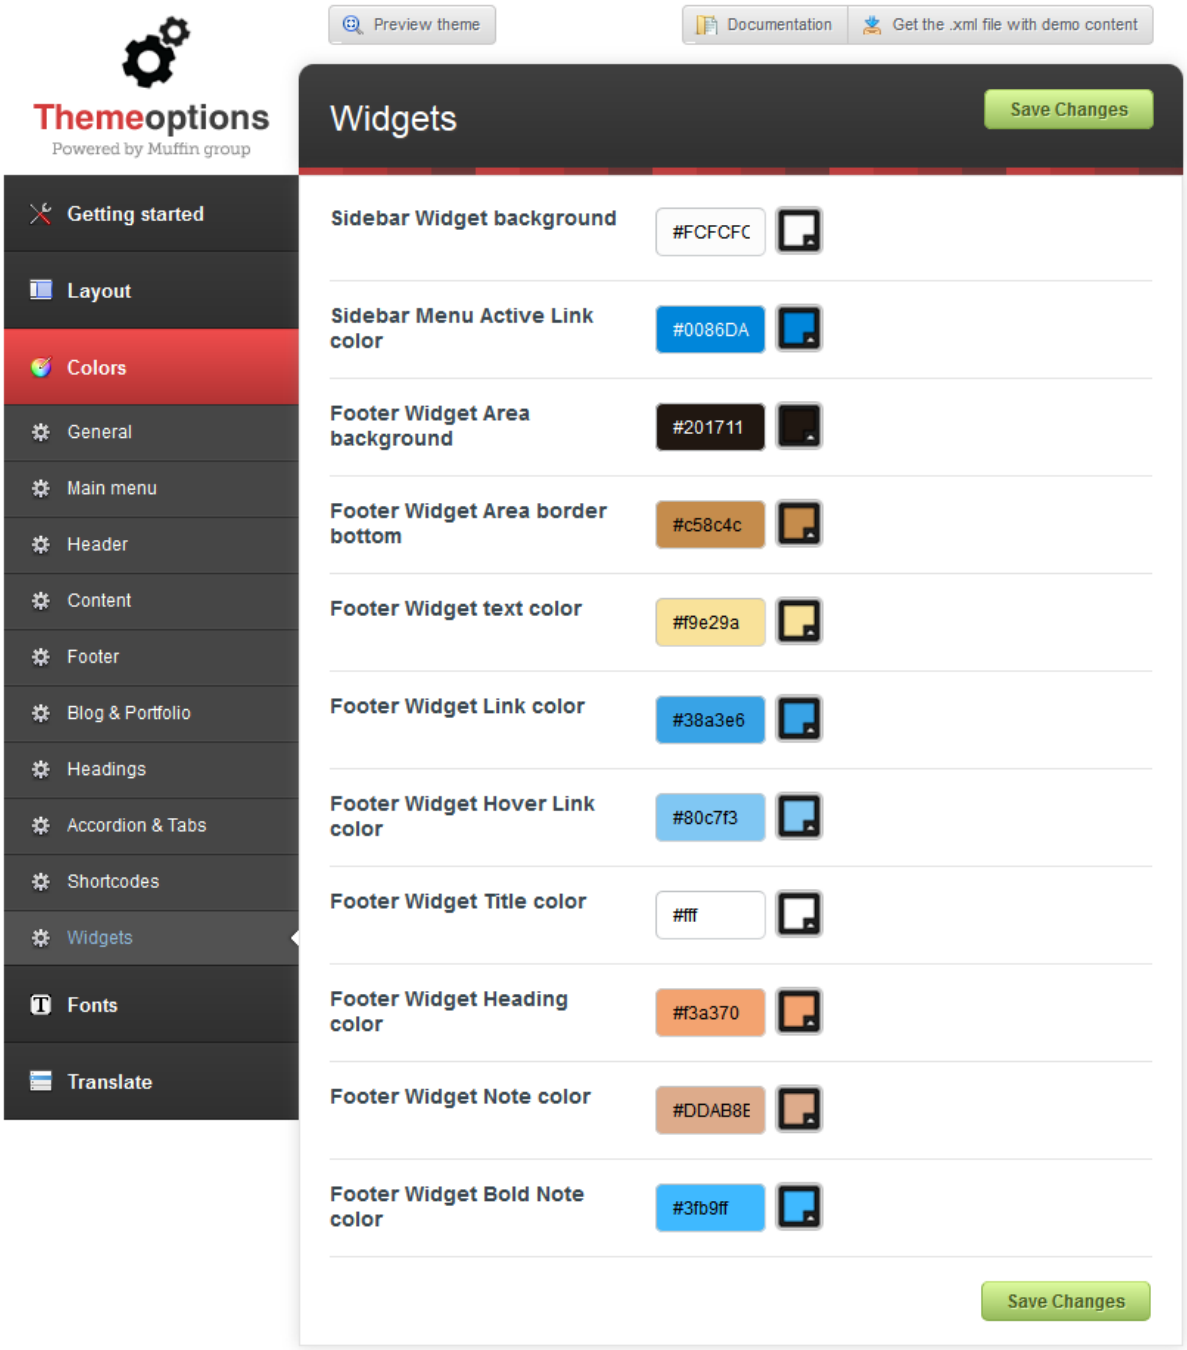
4.3.9 Shortcodes



- **Blockquote text color** - text color for *Blockquote* item
- **Blockquote text background** - background text color *Blockquote* item
- **Blockquote text border** - border text color for *Blockquote* item
- **Call To Action overlay** - overlay color for *Call to action* item
- **Call To Action color** - color for *Call to action* item
- **Call To Action Highlight color** - highlight color for *Call to action* item
- **Contact Box icon color** - icon color for *Contact Box* item
- **Image overlay** - overlay color for *Image* item
- **Pricing Box price color** - price color for *Pricing Box* item
- **Pricing Box border** - border color for *Pricing Box* item
- **Pricing Box Featured border** - featured border for *Pricing Box* item
- **Pricing Box Featured background** - background color for *Pricing Box* item
- **Portfolio Active Tab background** - background color for active tab for *Portfolio* item
- **Portfolio Active Tab Title color** - title color for active tab for *Portfolio* item
- **Portfolio Active Tab Text color** - text color for active tab for *Portfolio* item
- **Portfolio Active Tab Link color** - link color for active tab for *Portfolio* item

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.3.10 Widgets



- **Sidebar Widget background** - background color for sidebar widget
- **Sidebar Menu Active Link color** - link color for sidebar menu when menu is active
- **Footer Widget Area background** - background color for widget area in footer
- **Footer Widget Area border bottom** - border bottom color for widget area in footer
- **Footer Widget text color** - text color for widget in footer
- **Footer Widget Link color** - link color for widget in footer

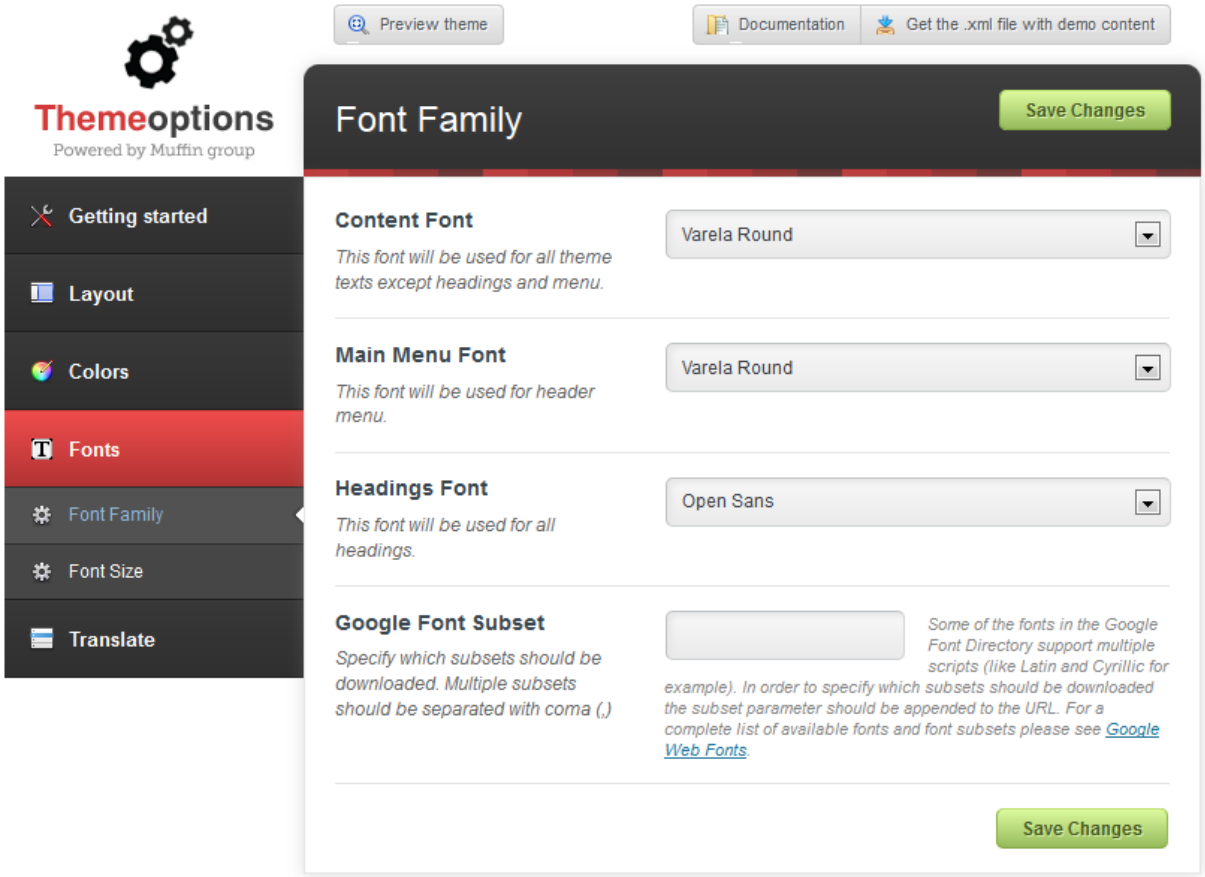
- **Footer Widget Hover Link color** - hover link color for widget in footer
- **Footer Widget Title color** - title color for widget in footer
- **Footer Widget Heading color** - heading color for widget in footer
- **Footer Widget Note color** - note color for widget in footer
- **Footer Widget Bold Note** color -bold note color for widget in footer

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.4 Fonts

In this section you can set up fonts for your website. We divided this section on four blocks what you can see below.

4.4.1 Font Family

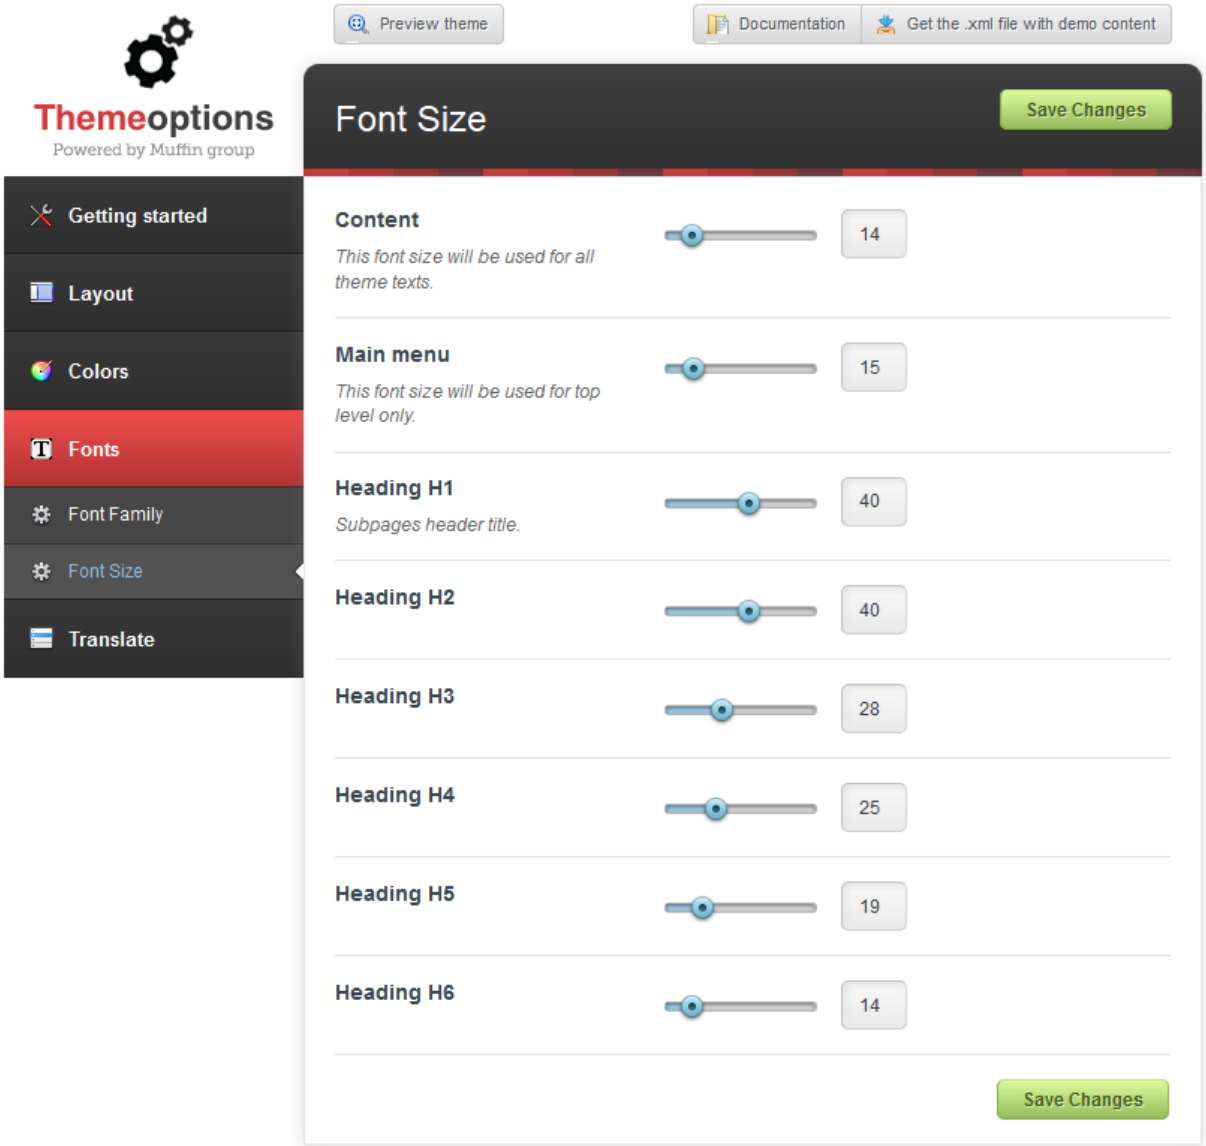


- **Content Font -** this font will be used for all theme texts except *headings* and *menu*
- **Main Menu Font -** this font will be used for header menu
- **Headings Font -** this font will be used for all headings

- **Google Font Subset -** you can specify which subsets should be downloaded. Multiple subsets should be separated with coma (,)

You can choose your own font from a palette of **over 600 fonts**.

4.4.2 Font Size



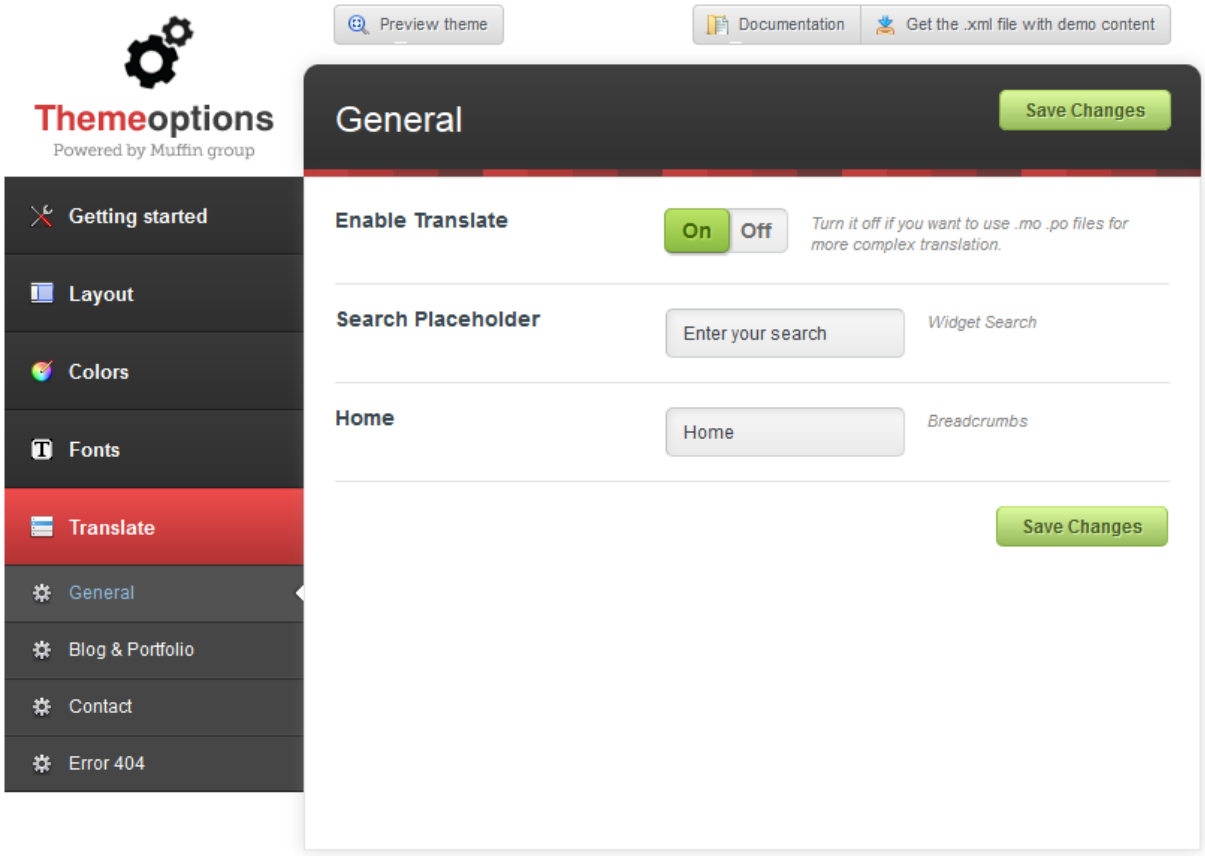
- **Content -** this font size will be used for all theme texts
- **Main menu** - this font will be used for top menu only
- **Heading H1 -** this font will be used for h1 headings
- **Heading H2 -** this font will be used for h2 headings
- **Heading H3 -** this font will be used for h3 headings
- **Heading H4 -** this font will be used for h4 headings
- **Heading H5 -** this font will be used for h5 headings
- **Heading H6 -** this font will be used for h6 headings

You can select the font size of the range **1-70**.

4.5 Translate

Translating the most important sections on the page has never been so easy.

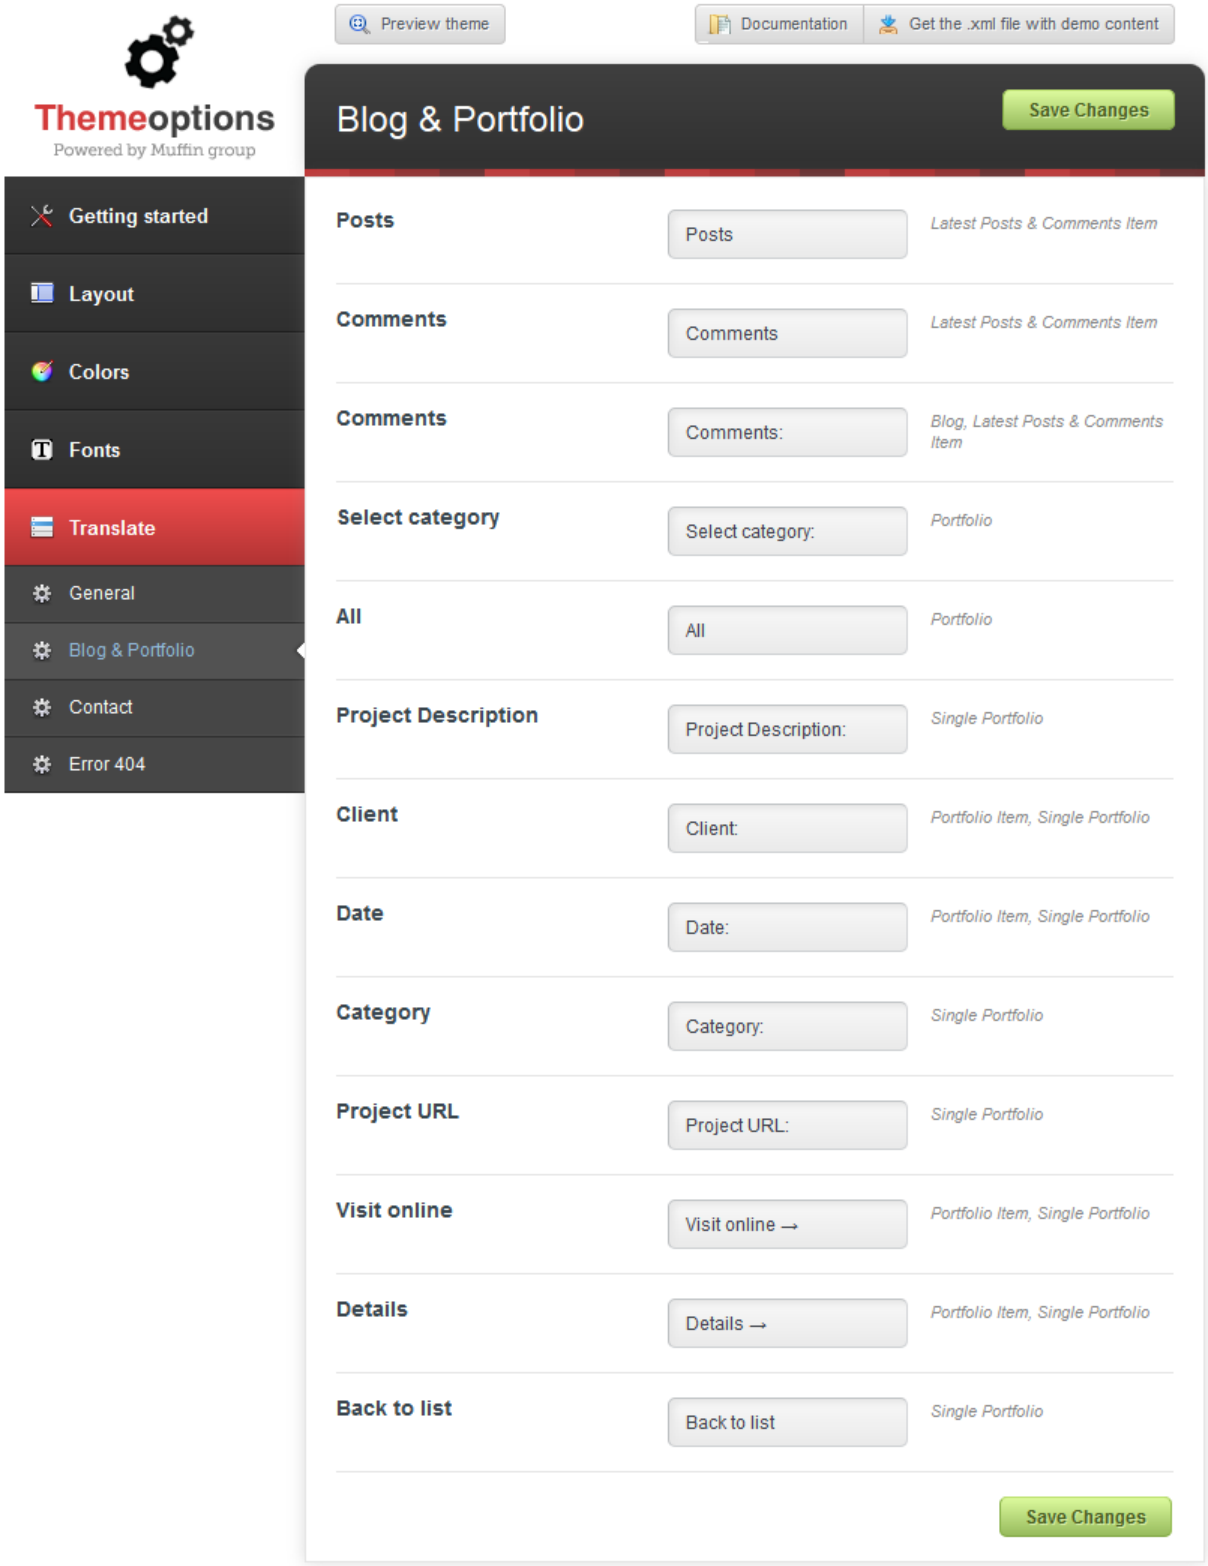
4.5.1 General



It depends how you want translate your theme. If you don`t want to translate using .mo and .po files you can do it easily in this section.

- **Enable Translate** - you can turn it off if you want to use .mo/.po files for more complex translation.
- **Search Placeholder** - here you can set up placeholder text for *Header* and *Widget Search*
- **Home** - here you can set up breadcrumbs text

4.5.2 Blog & Portfolio

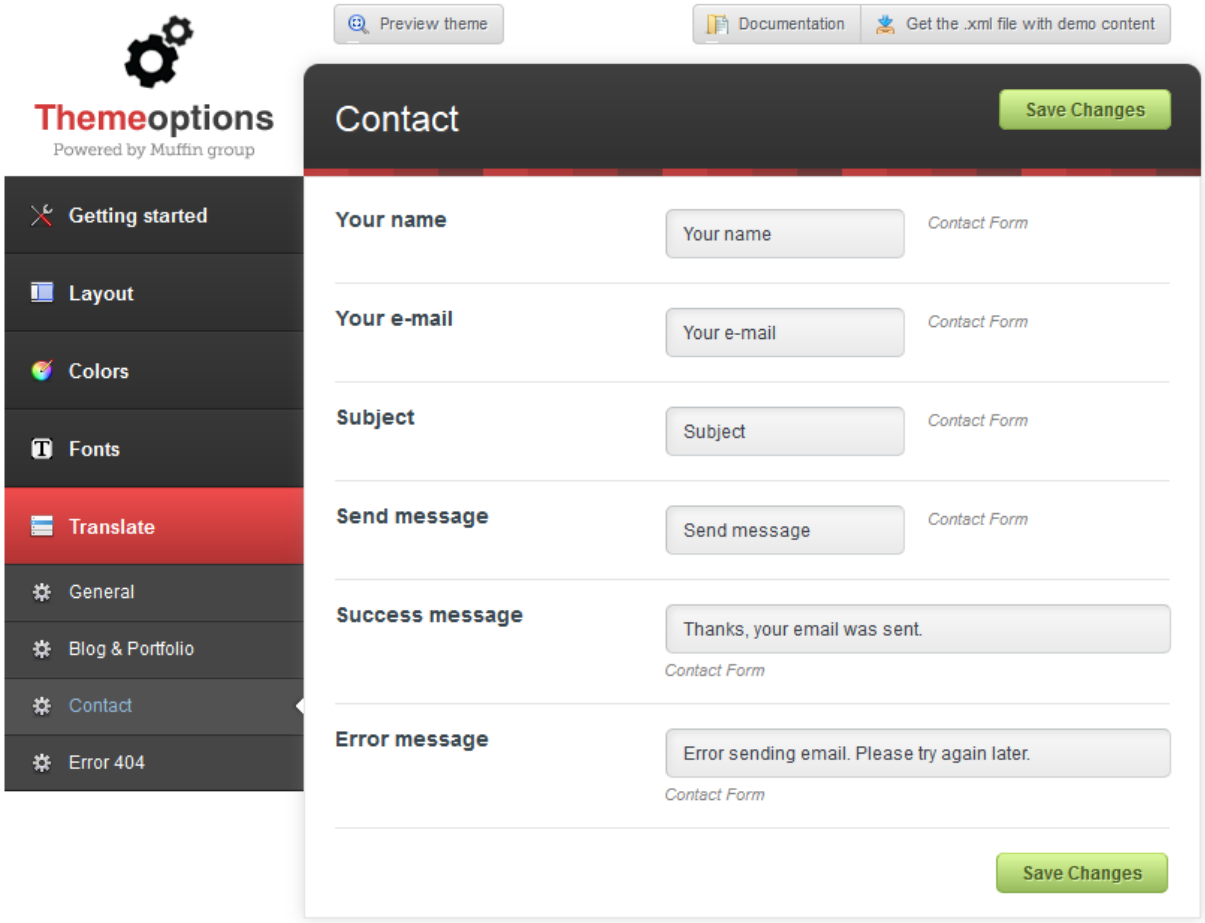


This is area where you can set up some texts for your portfolio and blog page.

- **Posts** - text available for latest posts & comments item
- **Comments** - text available for latest posts & comments item

- **Comments** - text to display when is more than one comment
- **Select category** - text available on portfolio page
- **All** - text available on portfolio page
- **Project Description** - text available on single portfolio page
- **Client** - text available on single portfolio page
- **Date** - text available on single portfolio page
- **Category** - text available on blog & single portfolio page
- **Project URL** - text available on single portfolio page
- **Visit online** - text available on single portfolio page
- **Details** - text available for portfolio item & single portfolio
- **Back to list** - text available on single portfolio page

4.5.3 Contact

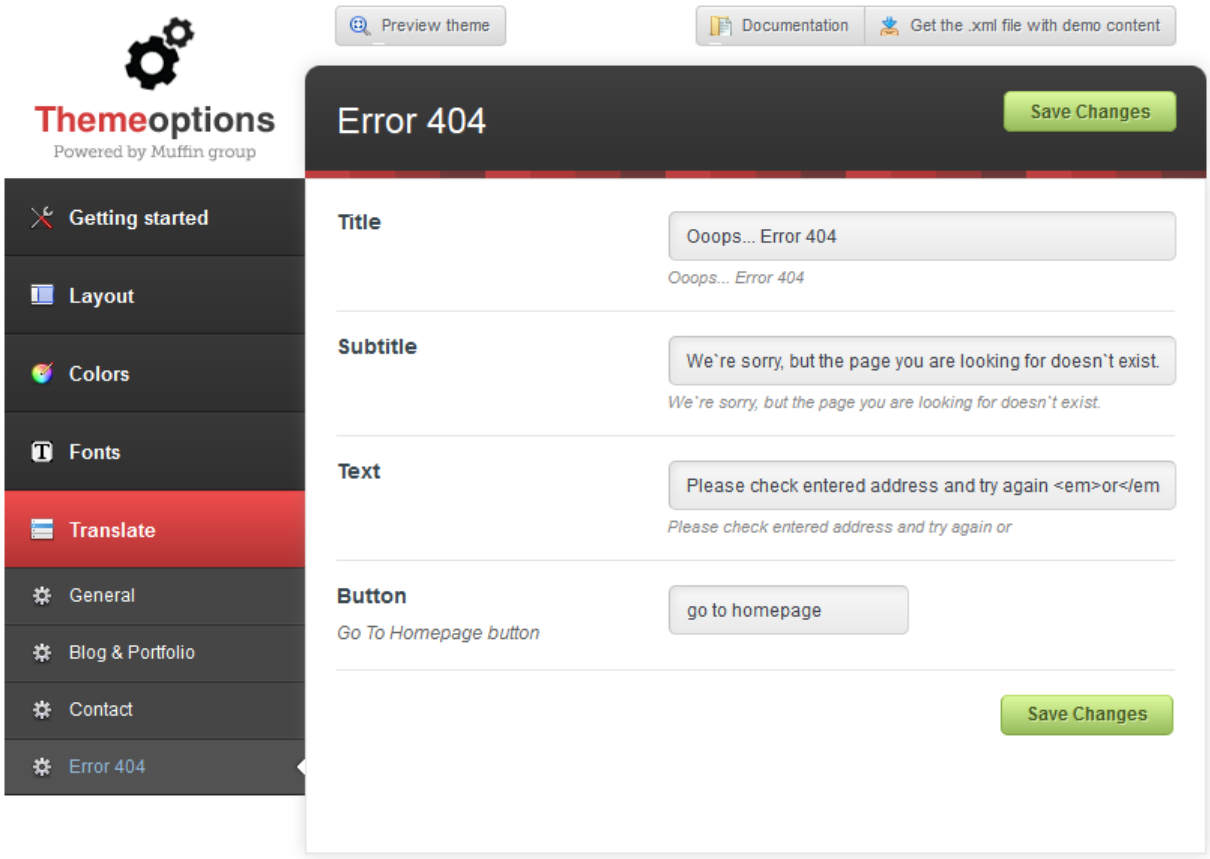


Translate the most important things in **Contact**.

- **Your name** - translate "Your name" in contact form
- **Your e-mail** - translate "Your e-mail" in contact form
- **Subject** - translate "Subject" in contact form
- **Send message** - translate "Send message" in contact form
- **Success message** - translate "Success message" in contact form

- **Error message** - translate "Error message" in contact form

4.5.4 Error 404



Now your **Error 404** page is 100% configurable. You can set up here below options:

- **Title** - this is title for error 404 page
- **Subtitle** - this is subtitle for error 404 page
- **Text** - text message for error 404 page
- **Button** - this is text for button on error 404 page

For each fields you can set up your own text.

5. Shortcodes

As you know, shortcodes are really useful in creating pages, and they accelerate your work. That`s the main reason why have created them. Below you`ll learn how to use them in the "Limuso" theme. There is a lot of them and they are easy to use.

5.1 Adding shortcodes in content using wp-editor

You can use shortcodes directly in WP editor. Just click on green circle button with plus inside. After that you`ll see whole list of shortcodes. After select right shortcode and click "Insert", the shortcode will be inserted into editor.

5.2 List of available shortcodes & how to use them

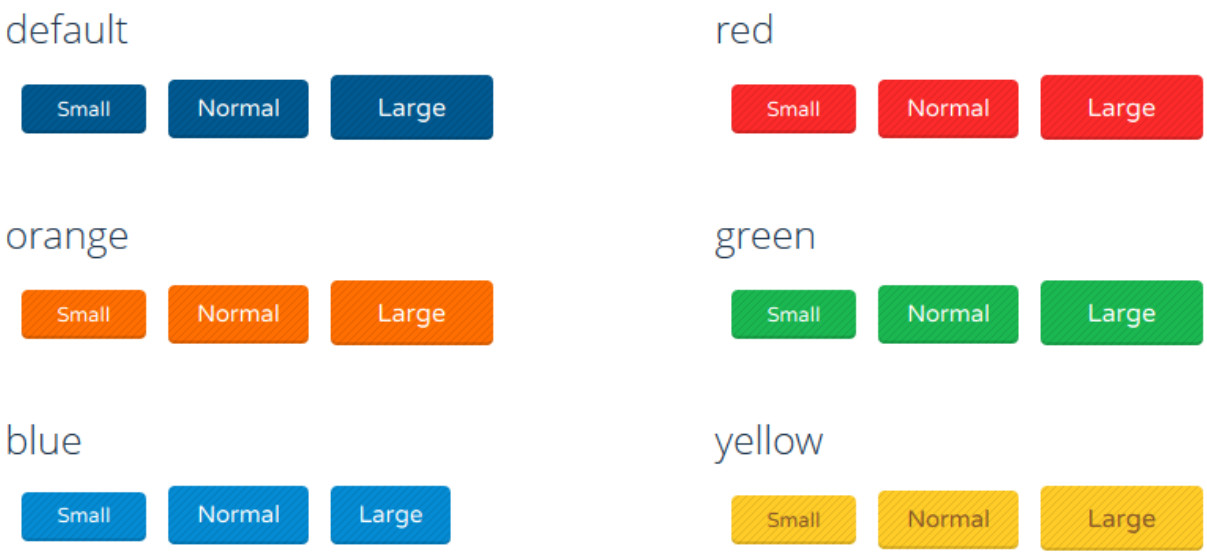
1) Buttons - as name indicates, these are the buttons to use on pages. Attributes for buttons are:

- **link** (link to other page)
- **title** (title for button)
- **target** (optional target for link, ex. "_blank")
- **size** (optional size of button - "normal" is default, you can also choose "small" or "large")
- **color** (color for text - as in background color you can use name of color, ex. "white" or hex ex."#FFFFFF")
- **class** – this option is useful when you want to use Fancybox (**fancybox**) or Video Iframe (**iframe**)

Below you can see the example of buttons shortcode:

```
[button link="http://muffingroup.com" target="_blank" title="Muffin group"
size="large" color="orange" class="iframe"]
```

Preview:



For more info and demo please go to buttons shortcode demo

2) Divider - This item is creating space between elements. It is also aligning for a single line, boxes located underneath.

Divider shortcode has got 2 attributes:

- **height** - enter the amount of the divider height (in px)
- **line** - type 1 if you want to show line, 0 if you don`t want

Example of this shortcode below:

```
[divider height="30" line="1"]
```

For more info and demo please go to divider shortcode demo

3) Ico - this is a very useful option for embedding icons into page. This option has got just one atrribute:

- **type** (type of icon)

Below you can see some examples of this shortcode:

```
[ico type="ico-file"]
```

```
[ico type="ico-copy"]
```

For more info and demo please go to ico shortcode demo

4) Image - this is a very useful option for embedding images into page. This option has got a long list of available atrributes:

- **src** (url to image)
- **align** (optional alignment for image) - available values: none (default), left, right,center
- **caption** (optional) - text available under the image
- **link** (optional) - link for larger image or other page
- **link_type** (optional) - type of link can be choosen from 2 values available:
- **target** (optional, works only with "details" link_type) - link target, available value: "_blank" (open in new window)
- **alt** (optional) - alternative text for image

Below you can see some examples of this shortcode:

```
[image src="" link="" align="left" caption="Align left with caption and lightbox"]

[image src="" link="" link_type="details" target="_blank" align="right" caption="Align right with caption <br /> and link to details <br /> open in new window"]

[image src="" align="center"]
```

For more info and demo please go to image shortcode demo

5) Lists - great tool when you want to present something within the list. We prepared 11 types of lists. Below you can check all of them:

Unordered bullet list

```
<ul class="list">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Ordered list

```
<ol class="list">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Roman ordered list

```
<ol class="list list_roman">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Alpha ordered list

```
<ol class="list list_alpha">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Unordered tick list

```
<ul class="list list_tick">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered info list

```
<ul class="list list_info">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered warning list

```
<ul class="list list_warning">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered plus list

```
<ul class="list list_plus">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered minus list

```
<ul class="list list_minus">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered arrow list

```
<ul class="list list_arrow">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered help list

```
<ul class="list list_help">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

As you can see, all of these lists have only a different kind of class. So if you want to change type of the list, you can easily do so by just changing the name of class..
For more info and demo please go to lists shortcode demo

6) Vimeo - this shortcode is for embadding vimeo videos on your page.

Vimeo video shortcode has got 3 attributes:

- **video** - vimeo video`s ID. This value is placed at the end of every vimeo video after last "/", for example: http://vimeo.com/**19819283**
- **width** - player`s width, 700 is highly recommended for left or right sidebar template while 950 for a default one.
- **height** - video player`s height

Example of this shortcode below:

```
[vimeo video="1084537" width="700" height="400"]
```

For more info and demo please go to video shortcode demo

7) Youtube - this shortcode is for embadding youtube videos on your page.

Youtube video shortcode have got 3 attributes:

- **video** - youtube video`s ID. This value is placed at the end of every video after "v=" parameter, for example: http://www.youtube.com/watch?v=**YE7VzlLtp-4**
- **width** - player`s width, 700 is highly recommended for left or right sidebar template while 950 for a default one.
- **height** - video player`s height

Example of this shortcode below:

```
[youtube video="YE7VzlLtp-4" width="700" height="420"]
```

For more info and demo please go to video shortcode demo

6. Blog

To create a blog please create a new page *Pages > Add New* and set up the title eg. *Blog*. In field *Template* leave default option on *Default Template*. In bottom section you will find *Page options* such as *Layout* and *Sidebar*. As you probably have guessed, you can choose whether your blog should be on full width or whether you want it with the sidebar (left or right). If you want blog with the sidebar you should also select the right sidebar for your page.
You can also add video for each post. In section *Post option*, uder the *Visual/HTML* default editor you have some options to set. In this section you can set up **Vimeo** or **Youtube** video.

At the end please click *Publish* button on the right.

In the next step please go to *Settings > Reading > Front page displays > A static page > Posts page,* select page that you have already created and click *Save changes*.

We have created some features specifically for bloggers. You will find them in *Theme options panel > Getting started > Blog*. These options are set on default for each new post. Full description of options for blog can be found in section **Theme Options (section 4.1.3)**

Adding new posts works similar to standard WordPress *Posts > Add New*. Posts will be displayed on the already created page.

Images for posts we can add using *featured image*.

For more info about post creation please go to http://en.support.wordpress.com/posts/. You can also check the movie about how to create a post http://www.youtube.com/watch?v=Sa4uimrgNz8

7. Portfolio

To create a portfolio please start by creating a new page *Pages > Add* New and setting up the title eg. *Portfolio*. In field *Template* set the option *Portfolio template*. In the bottom section you also have *Page options* such as *Layout* and *Sidebar*. As you have probably guessed, you can select whether your portfolio should be in full width or whether it should be with a sidebar (left or right). If you decide on the portfolio with a sidebar you should also select the right sidebar for your page.

In *Portfolio* section you can also add videos from **Vimeo** or **Youtube** for each portfolio item. Please don`t forget set up featured image for portfolio item when you are adding video.

We have created some options for *Portfolio page*. You can find them in *Theme options panel > Getting started > Portfolio*. More info about these options can be found in **Theme options panel (section 4.1.4)**.

Porfolio items are working just like typical post. To add a new portfolio please go to *Portfolio > Add new*. As you can see you choose similiar options as for a blog. Additionally, in the bottom section of the page you have *Page options*. Here you can choose whether you want a full width portfolio or the one with a sidebar (left or right). When you choose the option with a sidebar **please don`t forget to select the right sidebar** for this page.

You can also type *Excerpt* and select *Featured image*. After that please just click *Publish* button.

8. Menu creation

Menu creation works as in default Wordpress.

To add your own menus go to *Appearance > Menus*, type *Name* for your menu and click *Create Menu*. In next step, in section *Theme Locations* for position *Main menu* you need to

choose a menu that you've just created.

Now you can add *Pages*, *Posts* and *Custom Links* from blocks located on the left. At the end you need to save it by clicking on *Save Menu*.

For more info about the menu creation please go to
http://en.support.wordpress.com/menus

9. Images

For this theme we used some images & icons available on the web. Below you have some url's to sites from where we get images:

Article boxes:

10. SEO

In the era of what is happening in the search engines (especially *Google*) we implemented SEO option in our theme. We hope this will be very helpful for all of you.

To set up general options for SEO please go to *Theme options panel > Getting started > General* . You can set up here things like *Meta Description* or *Meta Keywords* for homepage (this is also default option for each new page).

If you are using *external SEO plugin* you can easily turn it off.
Of course you can also set up options like *Title*, *Meta Description* and *Meta Keywords* for each page in this theme. You can do it in *Pages > Add page > Page options.*

In section *Page Options* you can find fields like **SEO Title**, **SEO Description** and **SEO Keywords**. If you fill these fields, the page will adopt this values. If you leave this fields empty, the page will adopt default values that are in *Theme options panel > Getting started > General.*

11. Support & contact with us

You can contact us in few ways. It depends on what you exactly need.

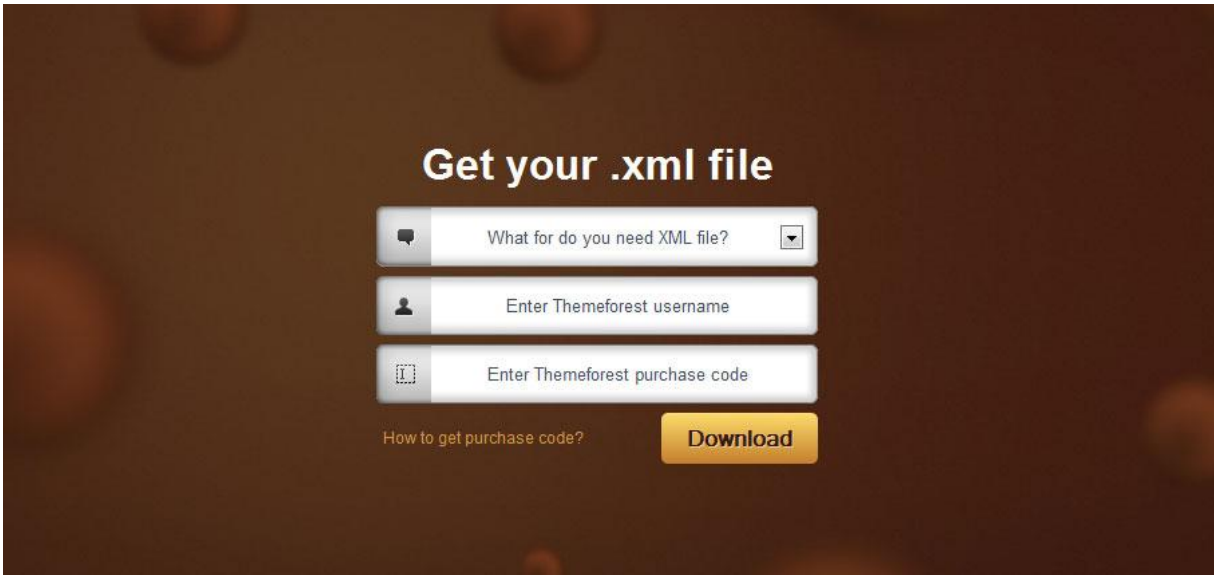
- **If you have got a questions about theme**, please place your question on forum **http://forum.muffingroup.com/limuso** . Please note that we won`t answear support question in comments or emails - we prefer to provide you with support on forum because your question can be helpful to other customers.

- Via comments you can send only presale questions or comment that is not related to support.

- **If you have a really big problem and really need to give us access to your account** (that is personal and can only be used by support) you can contact us by using contact form on **our profile`s page on Themeforest** http://themeforest.net/user/muffingroup - in right bottom section of page.

There is no other way contact with us. So **please don`t contact us by sending message on youtube, facebook or twitter** - because it`s really difficult for us to control, your question could be lost in these communication channels.

12. XML file with demo content



To **download the XML file with demo content** please at first go to page: http://themes.muffingroup.com/xmls/

In next step please select a product for which you need xml file (in this case please choose **Limuso**). Please also paste your *themeforest username* and *purchase code*. Afterwards simply click "*Download*" and your file should start downloading.

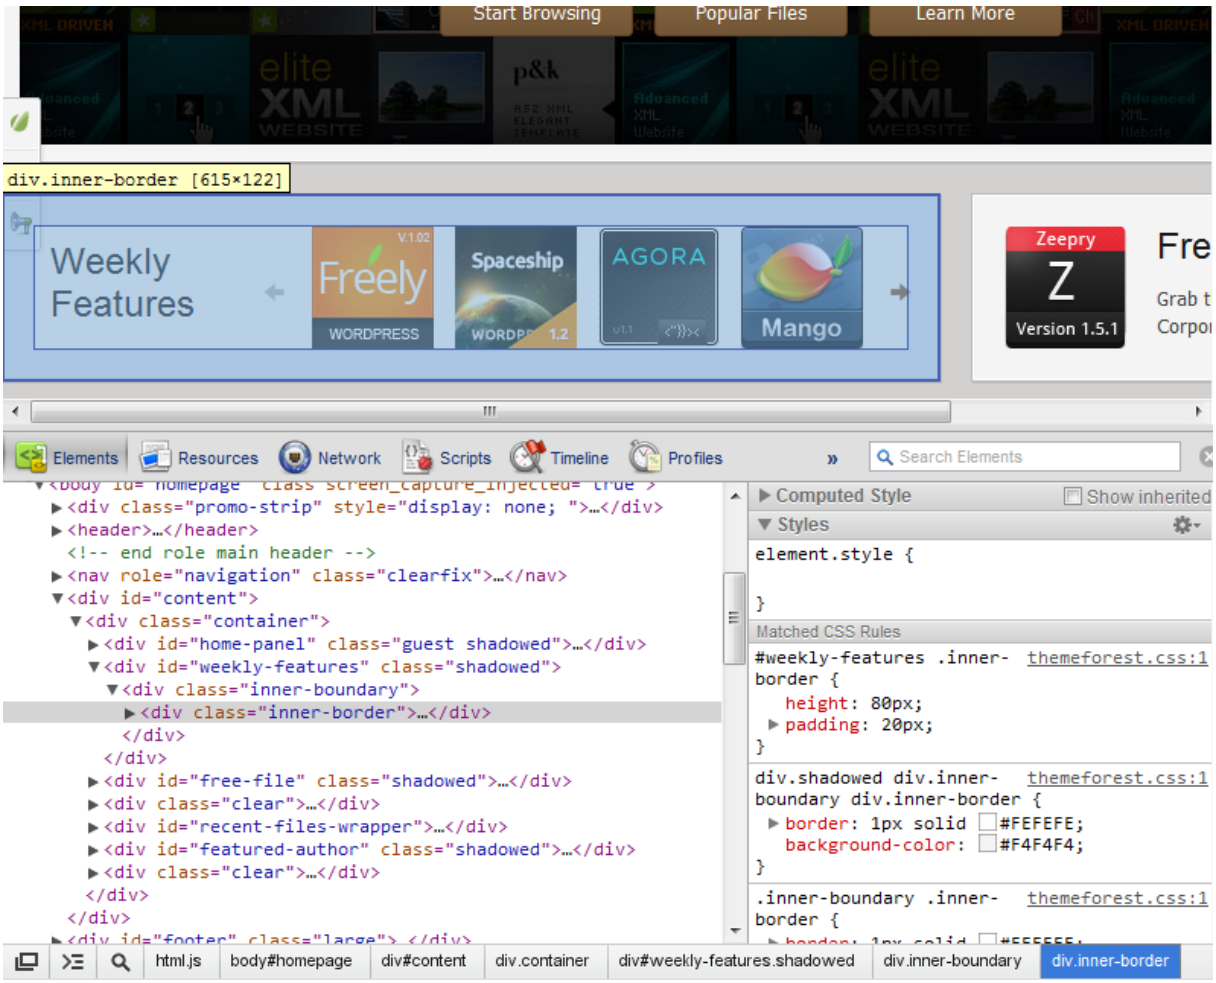
When you get this file onto your computer, you can import it into your wordpress (please import this file only after installing **Limuso theme**). This video (http://www.youtube.com/watch?v=ohKx65P2HNU) will show you how to import this file properly.

13. Advanced theme customization

Sometimes there is a moment when you want to change something on your site that is not available in theme options panel. Something like: font size, color, margin or any other customization. You don`t have to ask us about all these things and wait for our response ever again. You can succeed in doing it on your own.

13.1 Google Chrome

To do it you can use two best tools available for free in your web browser. If you`re using **Google Chrome** you can inspect element that you need to change by "Inspect element". To do it just hover mouse on element and click "Inspect element". After that you`ll see something like on screen below:



As you can see on the image, on the left side there is a list of styles used for each class/id. If you want to change something, you can edit it on the screen and see how the elements look like. If everything is good and you want to make the same changes on your site please copy right styles from box of right side, for example:

```
#weekly-features .inner-border {

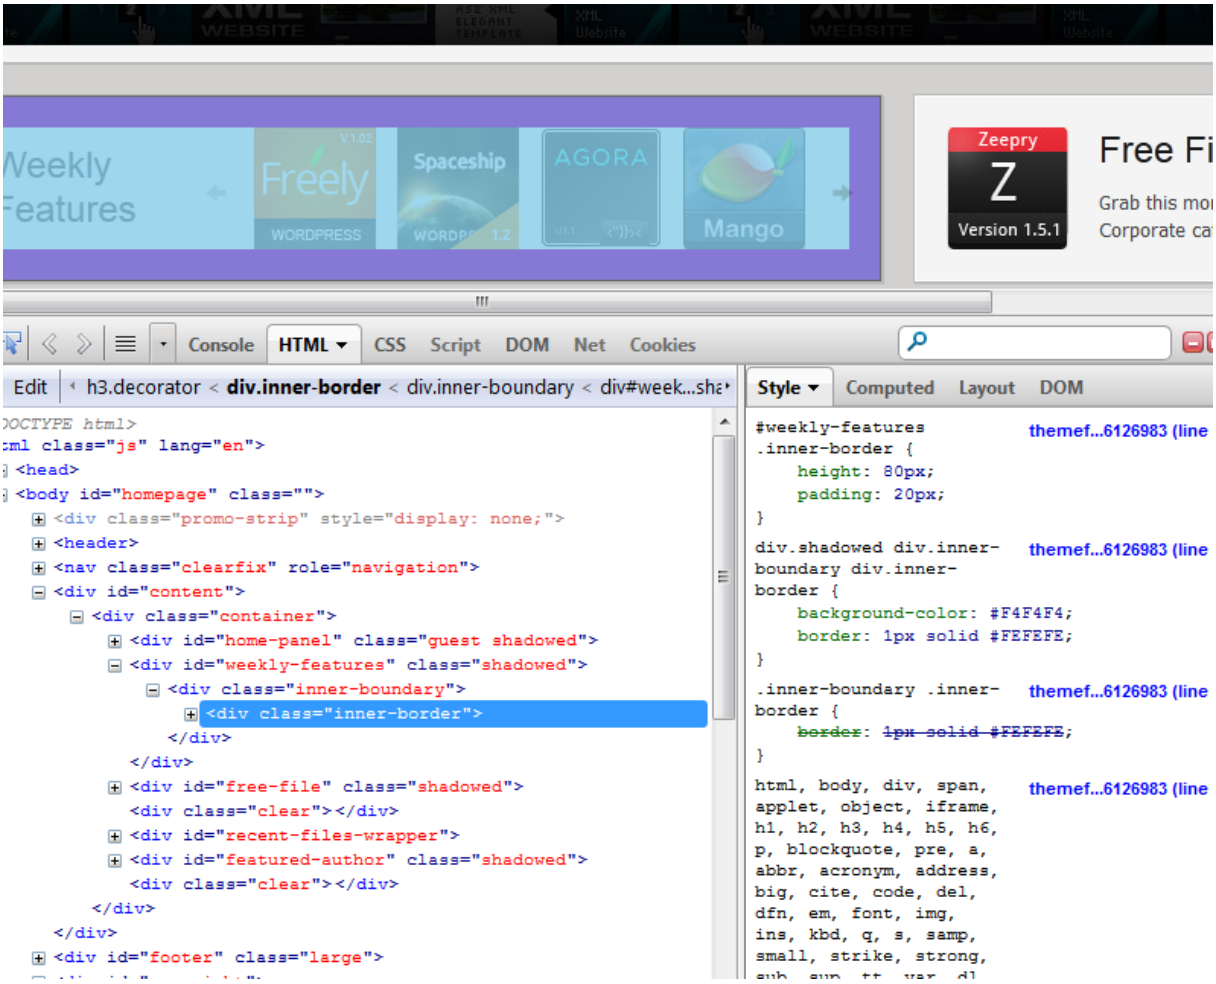
        height: 80px;
        padding: 20px;

}
```

and paste this code into: *Theme options > Styles > Custom CSS code*. If you want to paste this code instead of Custom CSS code you can do it in *custom.css* file. The result will be identical. It`s up to you to decide on which way to use.

13.2 Firebug for Firefox

Apart from Google Chrome, we also suggest to use **Firebug for Firefox**. In contrast to Google Chrome, Firebug must be installed at first before you can use it. To do so please click **Firefox in the left top corner > Add-ons** and then search for Firebug and install it. When you get it into your browser you can use it the same way as with Google Chrome but instead of clicking "*Inspect element*" please click "*Inspect element with Firebug*". On the screen below you can see that it will look very similar to Inspect element in Google Chrome.



As you can see on image, on the left side there is a list of styles used for each class/id. If you want to change anything you can edit it on the screen and check what elements look like. If everything is good and you want to make the same changes on your site please copy right styles from box of right side, for example:

#weekly-features .inner-border {

height: 80px;
padding: 20px;

}

and paste this code into: *Theme options > Styles > Custom CSS code*. If you want to paste this code instead of Custom CSS code you can do it in *style.css* file. The result will be identical. It`s up to you to decide on which way to use.

As you can see, it`s not difficult to use it and with the support of this tool you can save a lot of time, so we encourage you to try to do it as described and enjoy your new skills.
