1. General info & Installation

1.1 Few words on start

"**Cake**" is the new era of building websites. Totally new & fully customizable Muffin Builder, lot's of shortcodes, Full Width Portfolio, Swipe Technology, Revolution Slider. Sticky Menu or detailed Muffin Options panel. Be sure that with our new theme you can easily customize whatever you want on page. Please also note that all those options are amazingly easy to use.

1.2 Package from themeforest

At first, after purchasing this theme please download the package from Themeforest. All you need to do that, is move your mouse over your login name **in right top corner** (of course after you're logged in Themeforest) and then click **Download**. Here you will find all the items that you have purchased. It looks exactly just as the diagram below:

In the next step click the **Download > Main File(s)** button next to Cake theme and save package on your computer.

In the package you can find things like *documentation, license, psd files, zipped file with theme files* and folder with theme files called **Cake**. Please unpack the whole package after downloading it from Themeforest.

1.3 How to install & update it?

At first please make sure that you have unpacked the whole package shown in the last point. **This is very important!** You can complete installation in two different ways:

1. **WordPress Theme Manager** - please go to **Appearance > Themes > Install Themes > Upload**, select zipped theme folder called "Cake.zip" and press *Install Now* button. The wordpress will do the rest for you.
2. **FTP upload** - upload non-zipped theme folder called *Cake* to */wp-content/themes/* folder in your WordPress installation folder on your server.

In the second part of this guide we have described how to update **Cake**. Please make sure that you didn't make any changes in the files. If you have made changes and you don't want to lose them, the best way is to use one of freeware tools for comparing files, ex. [Beyond Compare](#) (we are not the authors of this tool so please don't ask us how to use it. Answers to how to use it can be found on their website). After comparing these files you can upload on server only the files that hasn't been changed.

If you haven't changed any theme files, all you need to do is update your version of theme by downloading the latest package from themeforest, unpacking files and uploading new files on the server while replacing the old files. Simply overwrite them.

All your data in the database are safe because after updating theme files doesn't change anything in the database. Please however always make a backup of your files & database.

2. Page creation

Creating your own page has been never so easy. To make the first step please go to *Pages > Add new*. On first sight everything looks just like in default wordpress. But when you have a look under *Visual/HTML* area you will see some *Page options*.

2.1 Getting started

The screenshot displays the 'Page Options' interface for Muffin Builder. At the top, there's a header with the Muffin Group logo and an 'Add Section' button. The main area is a drag-and-drop editor with several rows of content blocks. Each row starts with an 'Add Item' button and ends with edit, delete, and refresh icons. The blocks include:

- Three 'Icon Box' blocks with different descriptions: 'Tested by users', 'Cut like a diamond', and 'Lovely support'.
- A 'Fancy Heading' block with the text 'TASTE OUR LATEST WORKS'.
- A 'Portfolio Slider' block.
- A 'Video Box' and a 'Testimonials' block.
- A 'Column' block with the text 'ABOUT CAKE' and an 'Image' block.
- A 'Column' block.
- Four 'Chart' blocks with titles: 'Muffin Builder', 'Theme options', 'Ease of use', and 'Usefulness of doc'.
- A 'Column' block.
- A 'Column' block.
- Three 'Our Team' blocks with names: 'Paul Shepherd', 'Karen Donut', and 'Thomas McNeil'.

Below the editor, there are several settings sections:

- Hide the content:** A toggle switch set to 'Off'. Description: 'Turn it On if you build content using Content Builder. Use the Content item if you want to display the Content from editor within the Content Builder.'
- Layout:** Three layout options: 'Full width, No sidebar' (selected), 'Left Sidebar', and 'Right Sidebar'.
- Sidebar:** A dropdown menu set to 'Page'. Description: 'Shows only if layout with sidebar is selected.'
- Slider:** A dropdown menu set to 'Homepage'. Description: 'Select Muffin Slider or one from the list of available Resolution Slides.'
- SEO Title:** A text input field. Description: 'These settings overrides theme options settings.'
- SEO Description:** A text input field. Description: 'These settings overrides theme options settings.'
- SEO Keywords:** A text input field. Description: 'These settings overrides theme options settings.'

In first *Visual/HTML* area you can build your page using all available options in editor. Beyond the default options we included green button called "*Insert shortcode*". With this option you can build any page you want based on shortcodes. All available shortcodes for this theme has been described in section **Shortcodes (section 5)**.

Please note that you can build page based not only on shortcodes. You can also use Muffin Builder (section 2.2).

Below the **Muffin Builder** you can find some *Muffin Options*.

- **Hide the content** - this options will hide the content from Wordpress editor. You can turn this button on or off. If you`re using Muffin Builder for building content please turn this button off. If you won`t turn it off, the content from Wordpress editor will show above the Muffin Builder items.
- **Layout** - you can choose personal layout for each page. There is 3 options to choose: full width without sidebar, left sidebar or right sidebar.
- **Sidebar** - here you can select proper sidebar for this page (of course if in the previous option you have selected right or left sidebar). You can create your own sidebars in *Appearance > Cake > Getting started > Sidebars*.
- **Slider** - you can select Muffin offer slider or one of the Revolution Slider's for page. Please also note that for each page can be different slider. Of course, before select slider you need to create it with amazing **Revolution Slider (section 3)**.
- **SEO Title** - title for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)
- **SEO Description** - description for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)
- **SEO Keywords** - keywords for page (if you leave this field empty, page will get default settings from *Theme options panel > Getting started > General*)

After set up all this options on right side you can also choose right Page Template (section 2.3) for this site.

2.2 Muffin Builder

What about **Muffin Builder**? With his help web development is child's play. Page can be splitted on totally different sections where you can choose things like colors, backgrounds, layouts, sidebars, classes and much more. For each section you can add an items that you need.

Now with the new Muffin Builder you can also do things like clone sections or items so building websites is much faster and easier. You will love it!

To add item inside section please click *Add item* button. After that you will see the right Item already added below. You can do few things with this added Item.

- Expand Item to 1/4, 1/3, 1/2, 2/3, 3/4, 1/1 by using "+" button in the Item. The same way you can shorten this Item using "-" button. Please note that not all Items working with all sizes.
- You can delete Item/Section if you don't need it by × in right Item corner.
- You can edit each Item/Section by click on "pencil" in right bottom corner in the Item.
- You can clone each Item/Section by click on "clone" in right bottom corner in the Item.
- You can also move any Item/Section by drag & drop.

Please remember that Muffin Builder is working only with *Default template*.

You can choose one of below items:

Video ID
YouTube or Vimeo

62954028

It's placed in every YouTube & Vimeo video, for example:
YouTube: <http://www.youtube.com/watch?v=WolhnRczeNg>
Vimeo: <http://vimeo.com/62954028>

Width 700 px

Height 400 px

Save changes

This item is very useful option for embedding *Vimeo* videos into page.

Available sizes: '1/4', '1/3', '1/2', '2/3', '3/4', '1/1'

Attributes:

- **Video ID** - video's ID. This value is placed at the end of every vimeo or youtube video
For vimeo video ID is: <http://vimeo.com/19819283>
For youtube video ID is: <http://www.youtube.com/watch?v=YE7Vzlltp-4>
The bolded values are ID's for videos.
- **Width** - player's width, 700 is highly recommended for left or right sidebar template while 950 for a default one.
- **Height** - video player's height

2.2.28) Video Box

The screenshot shows a 'Page Options' dialog box for a 'Video Box' widget. It has a title bar with 'Page Options' and a close button. The main area is divided into three sections: 'Title' with a text input field containing 'SEE TUTORIAL VIDEO'; 'Text' with a text area containing 'Watch this video if you
 want to get "step by step" instruction'; and 'HTML5 mp4 video' with a 'Remove Upload' button and a notice: 'Notice: HTML5 video works only in moden browsers.' A 'Save changes' button is located at the bottom right.

This item is very useful option for embedding *Youtube* videos into page.

Available sizes: '1/2'

Attributes:

- **Title** - title for Video Box item
- **Text** - text for Video Box item
- **HTML5 mp4 video** - upload your own html5 video in .mp4 format

SPECIAL ITEM!!! SECTION

This is totally new item which gives you lot`s of possibilities with creating pages. Now you can split each page, post or portfolio item for sections. Section is a part of page and can have own settings. Please take a look on image below to see what you can do:

Page Options

Background Image  ✕

✕ Remove Upload

Background Image position ▼
This option can be used only with your custom image selected above.

Background Color Use color name (eg. "gray") or hex (eg. "#808080").
Leave this field blank if you want to use transparent background.

Layout ▼
Select layout for this section
Notice: Sidebar for section will show only if you set Full Width Page Layout in Page Options below Content Builder.

Padding Top px
Section Padding Top

Padding Bottom px
Section Padding Bottom

Style ▼
Predefined styles for section
For more advanced styles please use Custom CSS field below.

Custom CSS classes
Multiple classes should be separated with SPACE.
For sections with centered text you can use class: center

Save changes

Attributes:

- **Background Image** (you can upload image/pattern for background section)
- **Background Image position** (choose position for background image)
- **Background Color** (you can choose color for background)
- **Layout** (you can choose if you want section with sidebar or not - each section can have own sidebar what is really amazing and people loves it)
- **Sidebar** (choose sidebar for section)
- **Padding Top** (you can add top padding for section if you want)

- **Padding Bottom** (you can add bottom padding for section if you want)
- **Style** (choose 1 of 5 predefined styles for section)
- **Custom CSS classes** (you can type own class for section - this is really great option for all those who want to get special style for section). For example you can add here **my-own-super-section** class and then you can go to *Theme options > Layout > Custom CSS* and write there own styles for this class:

```
.my-own-super-section { margin: 30px; padding: 20px; font-size: 15px; etc... }
```

This is just example of what you can do so please do not use above css :)

If you want to use multiple classes then please separate them with SPACE. We have one built-in class for this section which is named **dark** and you can use it if you want to get dark background.

2.3 Page Templates

Template has several specially designed Page Templates, which can be used on Pages, adding them special features.

Archives

This template can automatically create list, that contain *Available Pages*, *Latest Posts*, *Archives by Subjects* and *Archives by Months*.

Portfolio

This template let you to add Portfolio for website. You can see these entries in section *Portfolio > Portfolio*.

Sitemap

This template let you to create simple sitemap.

3. Slider options

3.1 Revolution Slider

3.1.1 Getting demo slider

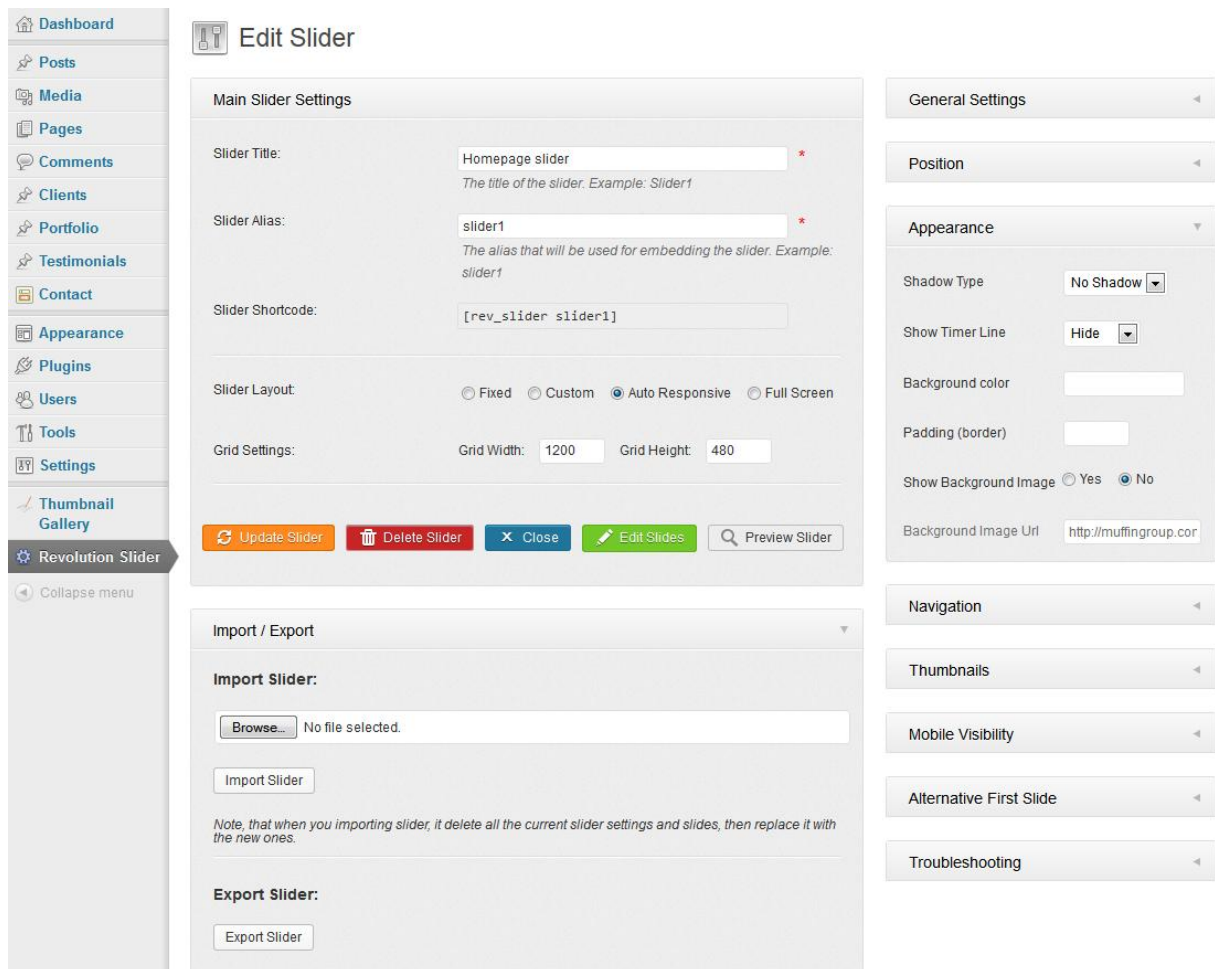

In package downloaded from Themeforest you can find **slider-demo** folder that has included *uploads* folder and *slider1.txt* file. In first step please upload content from uploads folder to your *wp-content/uploads* folder. In next step you need to go to **Revolution Slider**, click button "Create new slider" and fill below fields:

Slider Title: Slider 1

Slider Alias: slide1

In next step please click "Create Slider" button.

On the list of available sliders, click on slider that you already created and in the bottom section you will see "Show Export / Import" link. After that you will get field to select file. You need to choose *slider1.txt* file in this step and click "Import Slider" button.

3.1.2 Slider management

After pressing the "*Create New Slider*" button you will reach a form where you are asked to enter a *Slider Title* (used for the Slider overview in this backend) and a *Slider Alias* (a slug that is used to implement the Slider in your WP later, so keep it simple with no spaces and special chars).

You are also prompted to enter the *Sliders Basic Settings*, a *Slider Title* (for you to remember the Slider by) and a *Slider Alias* (please do not use special characters or spaces here, this defines the shortcode for you to use in your content).

The options in the boxes on the right side (General Settings, Position, Appearance, Navigation, Thumbnails) have helping Tooltips on mouseover so they are not explained here.

The Slider Type can be fixed (not responsive, fix dimensions), responsive (changes depending on the size of its max. sizes given later in relation to the screen size) or fullwidth (always 100% in width of the screen size, but height keeping the aspect ratio).

The Sizes section is needed to fit the slider in all screen sizes needed. The height of the slider will always be calculated to keep the aspect ratio from the max width and height given in the Slider Size line.

The next step is creating/editing slides. You get there by just clicking on "*Edit Slides*" in the Slider Form window.

Just press "*New Slide*" and the native WP Media Upload dialog window will appear. Choose or Upload the slide's background image, choose "*Full Size*" and then "*Insert Into Post*" (all like you are used to it in your WP editor). You can always click on the pic to change it.

Use the arrow handles on the right side to change the slides position in the slider (top to bottom = first to last slide to be shown) or delete it with the "*Delete*" button.

The "*Edit Slide*" leads you to the next chapter "*Slide*".

In the "*Edit Slide*" view you see the heart of our plugin. The drag&drop Caption editor.

But first please note that you have another chance here to change the background image with the "*Change Image*" button.

To create a Layer (Caption, Image or Video) press the button "*Add Layer*" or "*Add Layer: Image*". In case of a text layer a basic layer will be created you can use the "*Text*" field in the Layer Params to change the caption on it. The "*Style*" selectbox shows some basic styles (CSS classes) you can use to style the caption (you can always add own CSS classes to this field or edit the existing ones via the "*Edit CSS File*").

In case of an Image Layer you will see the native WP Media Uploader again. In case of a Video Layer you will be prompted to a custom Video selection wizard.

You now can move the Layers around via drag&drop or type in the x and y coordinate in the corresponding fields.

The "*Layers Sorting*" drag&drop list determines the Layers' z-index. This list specifies the stack order of an element.

An element with greater stack order is always in front of an element with a lower stack order.

Please also note that slider is a plugin and whole documentation for this item you can find in *documentation/revolution-slider-documentation* folder in package downloaded from themeforest.

Remember: please set up chmod on 777 on below folders to show slider thumbnails and for possibility to edit CSS styles for slider in admin panel.

wp-content/plugins/revslider/cache
wp-content/plugins/revslider/rs-plugin/css

NOTE! In default Revolution Slider version included into theme you will get all our styles for plugin. After update plugin to newer version, please do not forget to copy slider styles from */revolution-slider-demo/captions.css* (this folder is included into TF package) to */wp-content/plugins/revslider/rs-plugin/css/captions.css*

4. Theme options panel

Theme options panel has been especially created to make your work faster and easier. Using it is very easy and in just a few minutes you can change a lot of things on your page.

4.1 Getting started

4.1.1 General

In this section you can set up some general options for your site. You can find here things like *Google Analytics*, *Responsive version*, etc. Please check below options available in this section:

- **Responsive** - choose if you want to use responsive version or not.
- **Use built-in SEO fields** - if you are using external SEO plugin you can easily turn off built-in SEO option.
- **Meta Description** - this is meta description for homepage but it's also default description for each page added in *Pages* section.
- **Meta Keywords** - this is meta keywords for homepage but it's also default keywords for each page added in *Pages* section.
- **Google Analytics** - paste your Google Analytics code to track your site.

The screenshot shows the 'General' settings panel for the Muffin Group theme. The panel has a teal header with the 'MUFFIN GROUP MUFFIN OPTIONS' logo on the left, a 'General' title in the center, and a 'Save Changes' button on the right. A dark sidebar on the left contains navigation links: 'Getting started', 'General' (selected), 'Sidebars', 'Blog', 'Portfolio', 'Layout', 'Colors', 'Fonts', and 'Translate'. The main content area is divided into sections: 'Responsive' with an 'ON' toggle and a notice; 'Use built-in SEO fields' with an 'ON' toggle; 'Meta Description' with a text input field containing 'Just another WordPress site'; 'Meta Keywords' with an empty text input field; and 'Google Analytics' with a large text area for pasting code. A second 'Save Changes' button is located at the bottom right of the panel.

4.1.2 Sidebars

The screenshot shows the 'Sidebars' settings page in the Muffin Group Muffin Options interface. The page has a teal header with the logo and title 'Sidebars', and a 'Save Changes' button. A dark blue sidebar on the left contains navigation options: 'Getting started', 'General', 'Sidebars' (selected), 'Blog', 'Portfolio', 'Layout', 'Colors', 'Fonts', 'Translate', and 'Import & Export'. The main content area is divided into three sections: 1. 'Sidebars' management: A text input field for 'type sidebar title here' and an 'Add sidebar' button. Below are three existing sidebars: 'Page', 'Blog', and 'Contact', each with a delete 'x' icon. A note states 'Sidebars can be used on pages, blog and portfolio'. 2. 'Single Post Layout': A section with the text 'Use this option to force layout for all posts'. It features four layout icons: 'Use Post Meta' (a question mark), 'Full width without sidebar', 'Left Sidebar', and 'Right Sidebar'. A note below explains that this option cannot be overridden and is useful for standardizing appearance. 3. 'Single Post Sidebar': A section with the text 'Use this option to force sidebar for all posts'. It includes a text input field and a note: 'Paste the name of one of the sidebars that you added in the "Sidebars" section.' At the bottom of the page are 'Reset to Defaults' and 'Save Changes' buttons.

This is default option for pages and posts. Here you can set whether your post or page should have full width or maybe include a sidebar (left or right). For example when you choose *Left sidebar* each of your pages or post that you will create will have left sidebar. **Of course, this is only default option and while creating page or post you can set up your own layout.**

You can also manage your Sidebars here. You can add new and delete existing one.

Please always remember to click "*Save Changes*" button. Without that you will lose all your changes.

4.1.3 Blog

The screenshot shows the 'Blog' settings page in a WordPress theme. The interface is clean and modern, with a teal color scheme. The settings are organized into sections, each with a title and a brief description. The 'Posts per page' section has a text input field containing the number '6'. The 'Layout' section features three grid icons: 'Classic' (a 2x2 grid), 'Masonry' (a 3x3 grid), and 'Modern' (a 2x1 grid). The 'Read more' section has a text input field containing the text 'Read more'. The 'Show Post Meta', 'Show Author Box', 'Show Related Posts', and 'All pages in pagination' sections each have a toggle switch set to 'ON'. The 'Blog Page' section has a dropdown menu set to 'Blog'. The 'Save Changes' button is highlighted in teal.

Here you can find some options for blog page. This is of course a default option for new pages. You have got the following options for blog:

- **Posts per page** - you can select how many posts should be on page
- **Layout** - choose layout for blog that you like the most
- **Read more** - text for "Read more" link
- **Show Post Meta** - show all post meta for blog posts
- **Show Author Box** - this option will show autor box under single post page
- **Show Related Posts** - this option will show related posts under single post page
- **All pages in pagination**- here you can choose if you want to show all of the pages insted of a short list of the pages near the current page
- **Blog Page** - this option allow you to assing right page for blog

All of this options except *Posts per page* can be changed for each post.

Please always remember to click "*Save Changes*" button. Without that you will lose all your changes.

4.1.4 Portfolio

The screenshot shows the 'Portfolio' settings page in the Muffin Group theme. The page is divided into a sidebar and a main content area. The sidebar on the left contains navigation options: 'Getting started', 'General', 'Sidebars', 'Blog', 'Portfolio' (highlighted), 'Layout', 'Colors', 'Fonts', 'Translate', and 'Import & Export'. The main content area is titled 'Portfolio' and contains several settings sections: 'Posts per page' (input field with '6'), 'Layout' (four grid options: List, Two columns, Three columns, Four columns), 'Portfolio Page' (dropdown menu with 'Portfolio'), 'Single item slug' (input field with 'portfolio-item' and a warning note), 'Order by' (dropdown menu with 'Date'), 'Order' (dropdown menu with 'Descending'), and 'jQuery filtering' (toggle switch set to 'ON'). At the bottom, there are 'Reset to Defaults' and 'Save Changes' buttons.

This option will certainly be very helpful in creating your portfolio page. Here you can set the following options:

- **Posts per page** - this is the number of portfolio posts per page.
- **Layout** - you can choose what layout will be the best for your portfolio (one, two, three or four columns)
- **Portfolio page** - here you can select the right page for portfolio from list of all created pages. You need to choose a page for that because the theme applies info such a layout, sidebar and link to page in breadcrumbs.

- **Single item slug** - this is a link to single item. After changing that option please go to "*Settings > Permalinks*" and click "*Save changes*" button.
- **Order by** - you can select what should be used to sort your portfolio.
- **Order** - you can choose how your portfolio should be ordered (ascending or descending).
- **jQuery filtering** - you can choose if you want to filter portfolio items using jquery plugin to make your portfolio look much better.

Please always remember to click "*Save Changes*" button. Without that you will lose all your changes.

4.2 Layout

In this section you can set up some layout options such as social icons or logo.

4.2.1 General

The screenshot shows the 'General' settings page for Muffin Group. The interface is divided into a left sidebar and a main content area. The sidebar contains navigation options: Getting started, Layout (selected), Colors, Fonts, Translate, and Import & Export. The main content area is titled 'General' and includes a 'Save Changes' button. It is organized into sections for 'Homepage Layout', 'Homepage Logo', 'Homepage Retina Logo', 'Subpage Layout', 'Subpage Logo', and 'Subpage Retina Logo'. Each layout section offers four options: White header with dark text, Dark header with white text, Transparent header with dark text, and Transparent header with white text. The logo sections show a 'CAKE' logo with a 'Remove Upload' button. A 'Reset to Defaults' button is located at the bottom left, and another 'Save Changes' button is at the bottom right.

This section is created for header. Here you can set up some options like:

- **Homepage layout**- we created 4 predefined header layouts. Choose the one you like the best
- **Homepage Logo** - upload logo that fit the best for your homepage layout
- **Homepage Retina Logo** - upload logo that fit the best for your homepage layout (retina logo must be 2x larger than regular homepage logo)
- **Subpage Layout** - you can also choose 1 of 4 predefined header layouts for subpage
- **Subpage Logo** - upload logo that fit the best for your subpage layout
- **Subpage Retina Logo** - upload logo that fit the best for your subpage layout (retina logo must be 2x larger than regular homepage logo)

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.2.2 Header & Footer

The screenshot shows the 'Header & Footer' settings page in the Muffin Group admin interface. The page has a green header with the Muffin Group logo and 'MUFFIN OPTIONS' text. A navigation sidebar on the left includes 'Getting started', 'Layout' (with sub-items: General, Header & Footer, Social Icons, Custom CSS), 'Colors', 'Fonts', 'Translate', and 'Import & Export'. The main content area is titled 'Header & Footer' and contains several settings:

- Custom Favicon**: A 'Browse' button to upload a site favicon. A note below says 'Please use ICO format only.'
- Sticky Header**: A toggle switch currently set to 'ON'.
- Breadcrumbs**: A toggle switch currently set to 'OFF'.
- Action Button Text**: A text input field containing the word 'Features'.
- Action Button Link**: A text input field containing a hash symbol '#'.
- Footer Copyright Text**: A text input field. A note below says 'Leave this field blank to show a default copyright.'

At the bottom of the settings area, there are two buttons: 'Reset to Defaults' and 'Save Changes'.

Here you can set up some options for logos, header and much more. Below we will describe all of them.

- **Custom Favicon** - upload your custom favicon image in .ico format
- **Sticky Header** - turn on/off sticky header
- **Breadcrumbs** - turn on/off breadcrumbs on pages/subpages

- **Action Button Text** - text for not outsized button which is in right top corner on our demo page
- **Action Button Link** - link for action button
- **Footer Copyright Text** - type your own text for copyright section if you don't like default one

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.2.3 Social Icons

The screenshot shows the 'Social Icons' configuration page for 'MUFFIN GROUP'. The sidebar on the left lists various settings categories, with 'Social Icons' currently selected. The main area contains a list of social media platforms, each with a label, a text input field for a link, and a warning that the icon will not be displayed if the field is left blank. The platforms listed are Facebook, Google+, Twitter, Vimeo, YouTube, Flickr, LinkedIn, Pinterest, and Dribbble. At the bottom of the page, there are two buttons: 'Reset to Defaults' and 'Save Changes'.

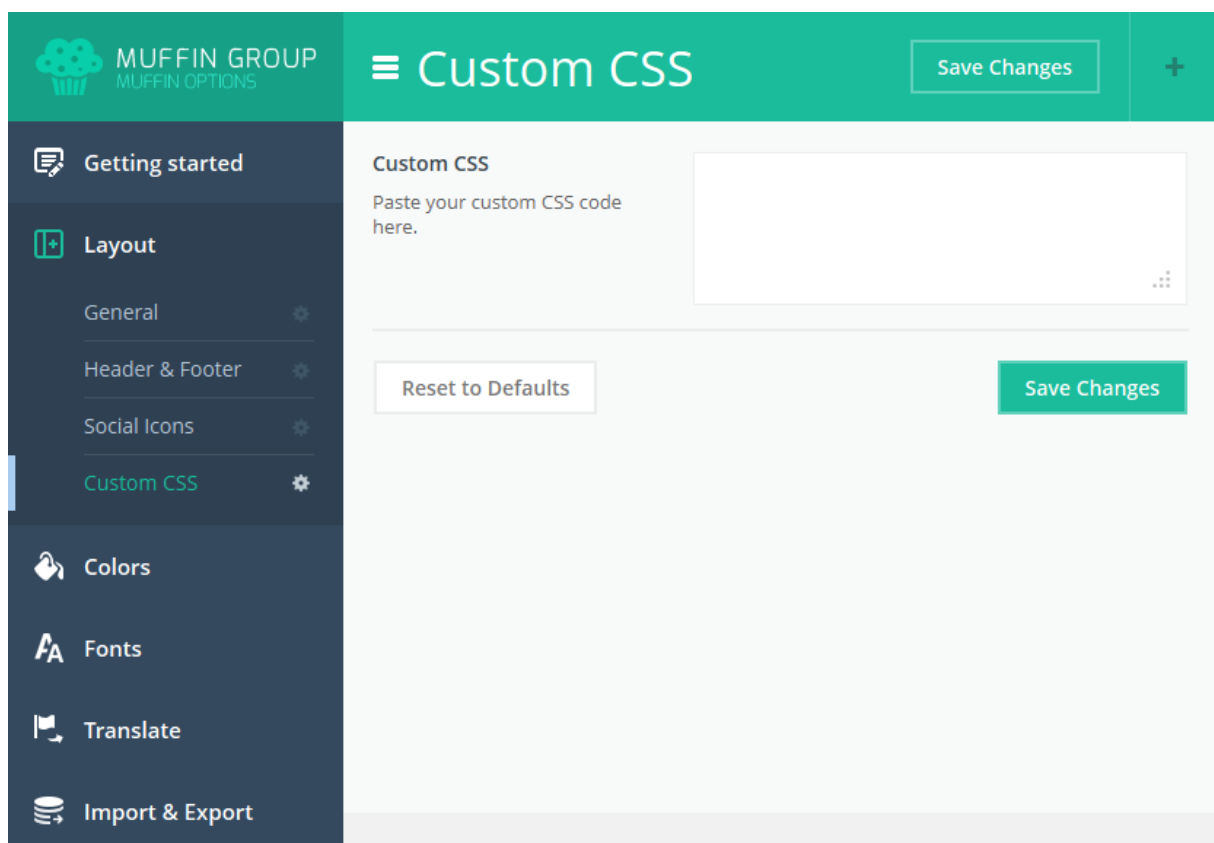

Here you can set up some options for social icons. Below we will describe all of them.

- **Facebook** - link to your facebook profile
- **Google +** - link to your Google + profile
- **Twitter** - link to your twitter profile
- **Vimeo** - link to your vimeo profile
- **YouTube** - link to your youtube profile
- **Flickr** - link to your flickr profile
- **LinkedIn** - link to your LinkedIn profile
- **Pinterest** - link to your Pinterest profile
- **Dribbble** - link to your Dribbble profile

If you leave empty field for social icons like facebook, twitter etc. **the icons will be not shown on the page.**

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.2.4 Custom CSS

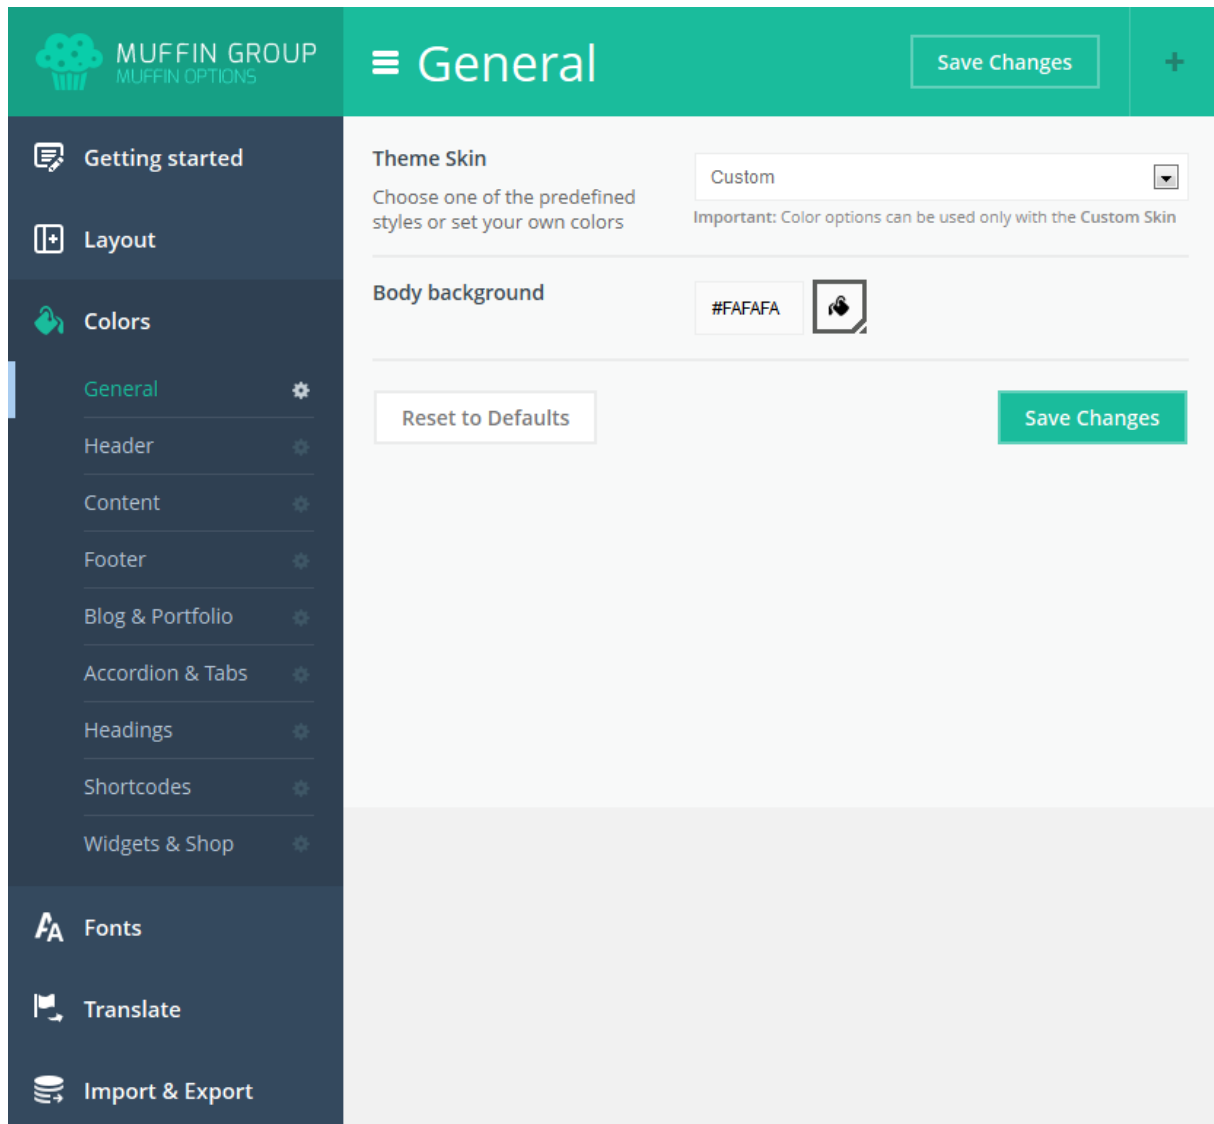

Here you can find only one field called **"Custom CSS"**. You can paste here your own css code for your page. Of a this field you don't need to make any changes in css files.

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.3 Colors

This is probably the most powerful options section in theme options panel. Here you can set up any color for each part of your page. Just check how many options you can set up in our color section.

4.3.1 General

Only two options are available in this section.

- **Theme skin** - here you can choose one of the predefined styles or you can set your own colors. Please remember that custom color can be used only with the *Custom Skin*.
- **Body background** - choose color for your background

Please always remember to click "*Save Changes*" button. Without that you will lose all your changes.

4.3.2 Header

The screenshot shows the 'Header' settings panel for Muffin Group. The interface is divided into a left sidebar and a main content area. The sidebar contains navigation options: Getting started, Layout, Colors (with sub-options: General, Header, Content, Footer, Blog & Portfolio, Accordion & Tabs, Headings, Shortcodes, Widgets & Shop), Fonts, Translate, and Import & Export. The main content area is titled 'Header' and features a 'Save Changes' button in the top right. Below the title, there are seven settings, each with a color swatch and a 'lock' icon:

- Main Menu Active Link**: Active, hover & border color. Color: #6ea81a. Note: For White Header only.
- Homepage Header background**: Homepage and subpages with header slider. Color: #6ea81a.
- Subpage Header background**: Subpages without header slider. Color: #eaeaea.
- Page Title color**: Color, border & hover background. Color: #486e14.
- Breadcrumbs color**: Color, border & hover background. Color: #A9A9A9.
- Subheader Button**: Color, border & hover background. Color: #545454.
- Filter Hover background**: Color, border & hover background. Color: #76B51B.

At the bottom of the settings area, there are two buttons: 'Reset to Defaults' and 'Save Changes'.

- **Main Menu Active Link** - active, hover and border color for main menu active link
- **Homepage Header background** - background color for homepage header section
- **Subpage Header background** - background color for subpage header section
- **Page Title color** - page title text color
- **Breadcrumbs color** - text color for breadcrumbs
- **Subheader Button** - color, border and hover background color for subheader button
- **Filter Hover background** - hover background color for filter

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.4 Footer

The screenshot shows the 'Footer' settings panel in the Muffin Group theme. The panel is divided into a left sidebar and a main content area. The sidebar contains navigation options: Getting started, Layout, Colors (with sub-options: General, Header, Content, Footer, Blog & Portfolio, Accordion & Tabs, Headings, Shortcodes, Widgets & Shop), Fonts, Translate, and Import & Export. The main content area lists various footer settings, each with a color picker and a 'Save Changes' button. The settings are: Footer background (#19191B), Footer Text color (#ababab), Footer Heading color (ffffff), Footer Link color (ffffff), Footer Link Hover color (#d1d1d1), Footer Note color (#8c8c8c, with a note 'Eg. Post Meta'), Footer Bottom Bar background (#0d0d0d), Footer Copyright color (#808080), Footer Social color (#808080), and Footer Social Hover color (ffffff). At the bottom of the panel are 'Reset to Defaults' and 'Save Changes' buttons.

Setting	Value
Footer background	#19191B
Footer Text color	#ababab
Footer Heading color	ffffff
Footer Link color	ffffff
Footer Link Hover color	#d1d1d1
Footer Note color	#8c8c8c (Eg. Post Meta)
Footer Bottom Bar background	#0d0d0d
Footer Copyright color	#808080
Footer Social color	#808080
Footer Social Hover color	ffffff

- **Footer background** - background color for footer section
- **Footer Text color** - text color for footer section
- **Footer Heading color** - heading text color for footer section
- **Footer Link color** - link color for footer section
- **Footer Link Hover color** - link color for footer section on hover
- **Footer Note color** - note color for footer section
- **Footer Bottom Bar background** - bottom bar background color for footer section
- **Footer Copyright color** - copyright text color for footer section

- **Footer Social color** - social icons color for footer section
- **Footer Social Hover color** - social icons color for footer section on hover

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.5 Blog & Portfolio

The screenshot displays the 'MUFFIN GROUP MUFFIN OPTIONS' theme settings for the 'Blog & Portfolio' section. The sidebar on the left includes options like 'Getting started', 'Layout', 'Colors', 'Fonts', 'Translate', and 'Import & Export'. The 'Colors' section is expanded, showing settings for 'Blog & Portfolio'. The main panel lists the following settings:

- Blog Icon color**: #76B51B
- Blog Quote Format background**: #76B51B
- Portfolio Image Icon background**: #76B51B
- Portfolio Image Icon color**: #ffffff
- Portfolio Image Icon Hover background**: #486e14
- Pager Arrow background**: #76B51B
- Pager Arrow Hover background**: #486e14

Buttons for 'Reset to Defaults' and 'Save Changes' are visible at the bottom of the settings panel.

- **Blog Icon color** - icon color on blog page
- **Blog Quote Format background** - background color for quote on blog page
- **Portfolio Image Icon background** -background color for icon on portfolio image
- **Portfolio Image Icon color** - color for icon on portfolio image
- **Portfolio Image Icon Hover background** -background color for icon on hover portfolio image
- **Pager Arrow background** - background color for arrow on blog/portfolio pager
- **Pager Arrow Hover background** - background color for arrow on blog/portfolio pager on hover

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.3.6 Accordion & Tabs

The screenshot shows the 'MUFFIN GROUP MUFFIN OPTIONS' interface. The top header is green with the title 'Accordion & Tabs' and a 'Save Changes' button. The left sidebar is dark blue with various menu items. The main content area is white and contains the following settings:

Setting	Value	Icon
Accordion Icon color	#6ea81a	Green icon
Tab Title color	#ffffff	White icon
Tab Title background	#434343	Dark grey icon
Tab Title Active color	#545454	Dark grey icon
Big Icon Title color	#545454	Dark grey icon
Tab Title Active background	#fafafa	Light grey icon
Tabs Content background	#fafafa	Light grey icon
Tab Big Icon color	#6ea81a	Green icon

At the bottom of the settings panel, there are two buttons: 'Reset to Defaults' and 'Save Changes'.

- **Accordion Icon color** - icon color for accordion item
- **Tab Title color** - title color for tab item
- **Tab Title background** - title background color for tab item
- **Tab Title Active color** - title color for tab item when active
- **Tab Title Active background** - background color for tab item when active
- **Tab Big Icon color** - big icon color for tab item

Please always remember to click *"Save Changes"* button. Without that you will lose all your changes.

4.3.7 Headings

The screenshot shows the 'Headings' settings page in the Muffin Group theme. The left sidebar contains a navigation menu with categories: Getting started, Layout, Colors, Fonts, Translate, and Import & Export. Under 'Colors', there are sub-menus for General, Header, Content, Footer, Blog & Portfolio, Accordion & Tabs, Headings (selected), Shortcodes, and Widgets & Shop. The main content area is titled 'Headings' and features a list of six heading color settings: Heading H1 color (#545454), Heading H2 color (#545454), Heading H3 color (#446b0b), Heading H4 color (#545454), Heading H5 color (#545454), and Heading H6 color (#545454). Each setting includes a color swatch and a small icon. At the top right of the main area is a 'Save Changes' button. At the bottom of the main area are 'Reset to Defaults' and 'Save Changes' buttons.

- **Heading H1 color** - text color for h1 (Subpages header title font color)
- **Heading H2 color** - text color for h2
- **Heading H3 color** - text color for h3
- **Heading H4 color** - text color for h4
- **Heading H5 color** - text color for h5
- **Heading H6 color** - text color for h6

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.8 Shortcodes

Setting Name	Color	Lock Icon
Blockquote Modern background	#6ea81a	🔒
Contact Box Modern background	#6ea81a	🔒

- **Progress Bar background** - background color for *Progress Bar* item
- **Testimonials Pager Active** - pager active color for *Testimonials* item

Please always remember to click "Save Changes" button. Without that you will lose all your changes.

4.3.9 Widgets & Shop

- **Widget Title color** - title color for widget
- **Widget Link color** - link color for widget

- **WooCommerce Sale Label background** - background color for woocommerce sale label
- **WooCommerce Price color** - text color for woocommerce

Please always remember to click "*Save Changes*" button. Without that you will lose all your changes.

4.4 Fonts

In this section you can set up fonts for your website. We divided this section on four blocks what you can see below.

4.4.1 Font Family

The screenshot shows the 'Font Family' settings page in the Muffin Group admin interface. The page has a dark teal header with the Muffin Group logo and 'MUFFIN GROUP MUFFIN OPTIONS' on the left, and a hamburger menu icon followed by 'Font Family' and a 'Save Changes' button on the right. A dark blue sidebar on the left contains navigation links: 'Getting started', 'Layout', 'Colors', 'Fonts' (highlighted), 'Font Family' (with a gear icon), 'Font Size' (with a gear icon), 'Translate', and 'Import & Export'. The main content area is white and contains four font settings sections, each with a dropdown menu set to 'Ubuntu':

- Content Font**: This font will be used for all theme texts except headings and menu.
- Main Menu Font**: This font will be used for header menu.
- Headings Font**: This font will be used for all headings.
- Google Font Subset**: Specify which subsets should be downloaded. Multiple subsets should be separated with coma (,). A text input field is empty. A note states: 'Some of the fonts in the Google Font Directory support multiple scripts (like Latin and Cyrillic for example). In order to specify which subsets should be downloaded the subset parameter should be appended to the URL. For a complete list of available fonts and font subsets please see [Google Web Fonts](#).'

At the bottom of the settings area, there are two buttons: 'Reset to Defaults' and 'Save Changes'.

- **Content Font** - this font will be used for all theme texts except *headings* and *menu*
- **Main Menu Font** - this font will be used for header menu
- **Headings Font** - this font will be used for all headings
- **Google Font Subset** - you can specify which subsets should be downloaded. Multiple subsets should be separated with coma (,)

You can choose your own font from a palette of **over 600 fonts**.

4.4.2 Font Size

The screenshot shows the 'Font Size' configuration page in the Muffin Group theme options. The interface includes a sidebar with navigation options: Getting started, Layout, Colors, Fonts (selected), Translate, and Import & Export. Under 'Fonts', 'Font Size' is selected. The main content area displays settings for various text elements, each with a slider and a numerical value:

Text Element	Description	Font Size
Content	This font size will be used for all theme texts.	14
Main menu	This font size will be used for top level only.	16
Heading H1	Subpages header title.	36
Heading H2		48
Heading H3		36
Heading H4		26
Heading H5		23
Heading H6		18

At the bottom of the settings area, there are two buttons: 'Reset to Defaults' and 'Save Changes'.

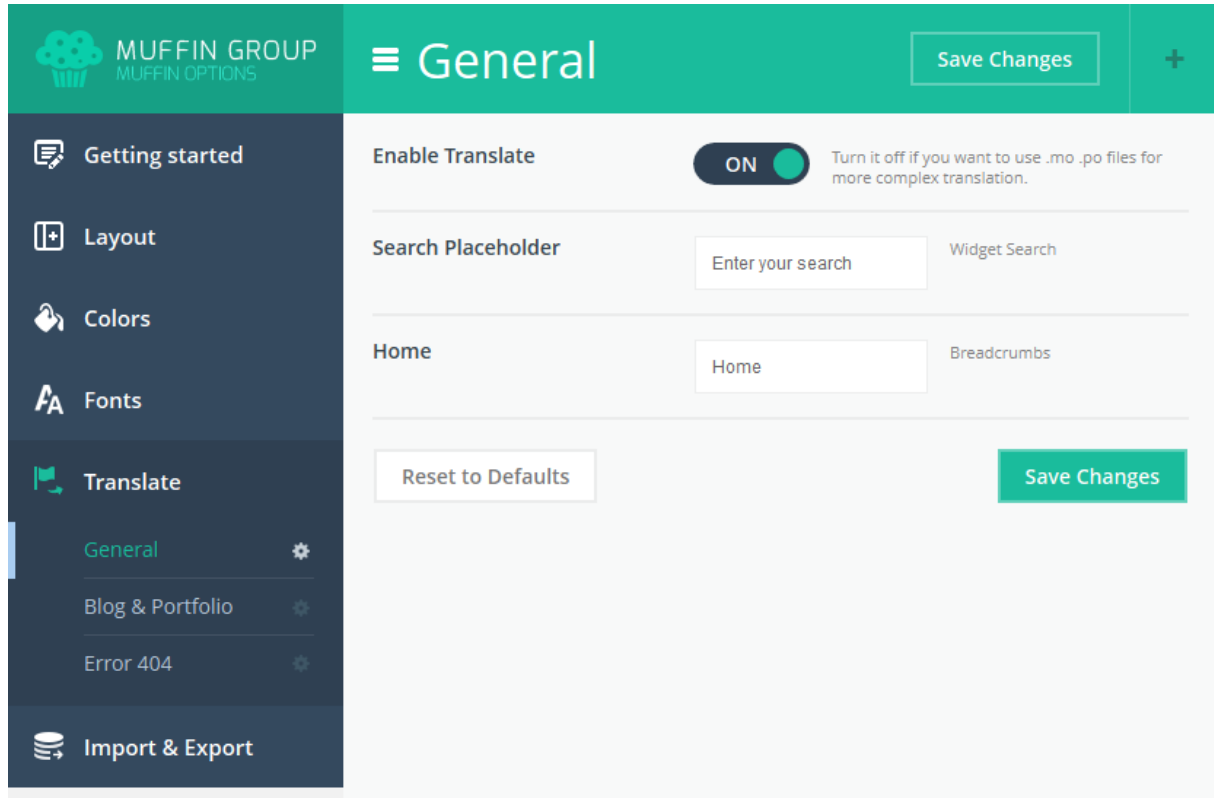

- **Content** - this font size will be used for all theme texts
- **Main menu** - this font will be used for top menu only
- **Heading H1** - this font will be used for h1 headings
- **Heading H2** - this font will be used for h2 headings
- **Heading H3** - this font will be used for h3 headings
- **Heading H4** - this font will be used for h4 headings
- **Heading H5** - this font will be used for h5 headings
- **Heading H6** - this font will be used for h6 headings

You can select the font size of the range **1-70**.

4.5 Translate

Translating the most important sections on the page has never been so easy.

4.5.1 General

It depends how you want translate your theme. If you don't want to translate using .mo and .po files you can do it easily in this section.

- **Enable Translate** - you can turn it off if you want to use .mo/.po files for more complex translation.
- **Search Placeholder** - here you can set up placeholder text for *Header* and *Widget Search*
- **Home** - here you can set up breadcrumbs text

4.5.2 Blog & Portfolio

Save Changes

This is area where you can set up some texts for your portfolio and blog page.

- **By** - text available on blog page
- **In** - text available on Blog page
- **Categories** - text available on Blog & Portfolio pages
- **Tags** - text available on Blog page

4.5.3 Error 404

The screenshot displays the Muffin Group website configuration interface for the Error 404 page. The interface is divided into a sidebar on the left and a main configuration area on the right. The sidebar contains the following options: Getting started, Layout, Colors, Fonts, Translate (with sub-options: General, Blog & Portfolio, Error 404), and Import & Export. The main configuration area is titled "Error 404" and includes a "Save Changes" button. The configuration fields are as follows:

Field	Value
Title	Oops... Error 404
Subtitle	We are sorry, but the page you are looking for does not exist.
Text	Please check entered address and try again or
Button	go to homepage

At the bottom of the configuration area, there are two buttons: "Reset to Defaults" and "Save Changes".

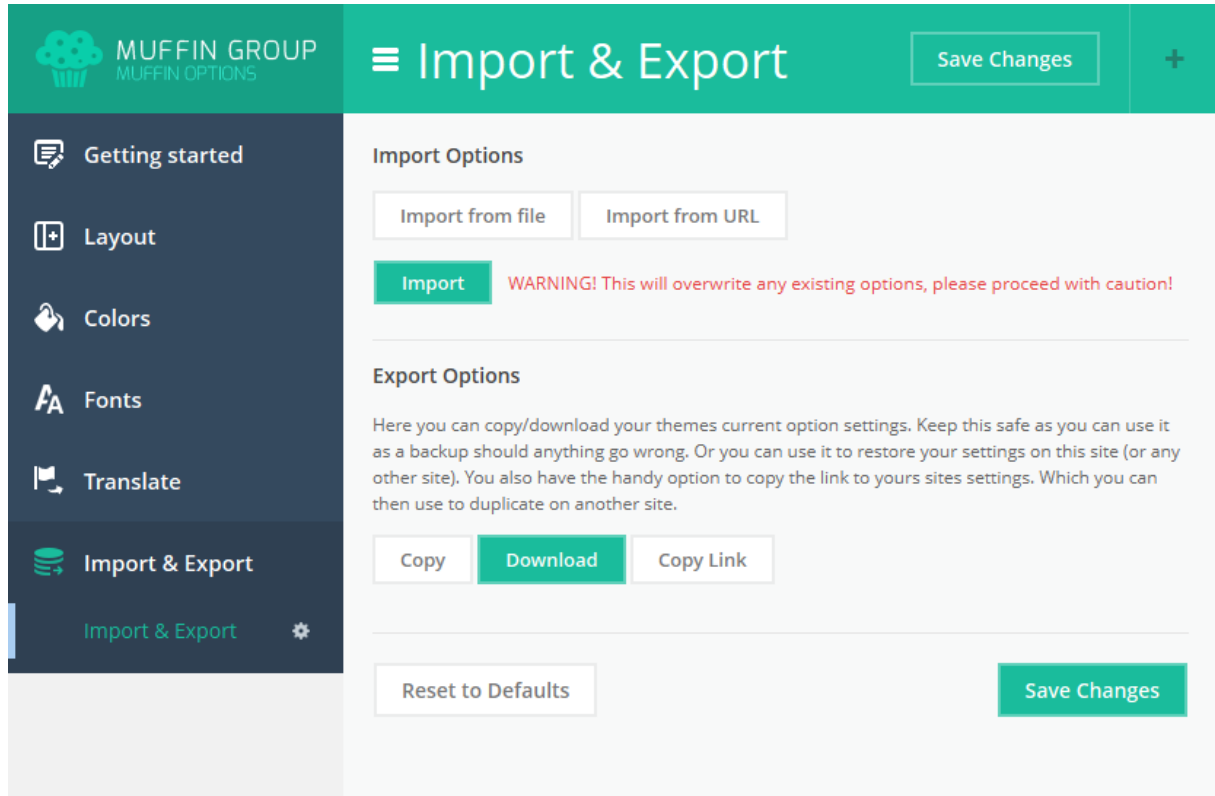

Now your **Error 404** page is 100% configurable. You can set up here below options:

- **Title** - this is title for error 404 page
- **Subtitle** - this is subtitle for error 404 page
- **Text** - text message for error 404 page
- **Button** - this is text for button on error 404 page

For each fields you can set up your own text.

4.6 Import & Export

This section is especially for all those who want to move settings from theme options panel between themes or when you move your website from test server to live. You have few different ways to import or export settings what you can see on image below:

You can also Reset settings from this section to default if you want so your theme will look like on our demo version.

5. Shortcodes

As you know, shortcodes are really useful in creating pages, and they accelerate your work. That's the main reason why we have created them. Below you'll learn how to use them in the "Cake" theme. There is a lot of them and they are easy to use.

5.1 Adding shortcodes in content using wp-editor

You can use shortcodes directly in WP editor. Just click on green circle button with plus inside. After that you'll see whole list of shortcodes. After select right shortcode and click "Insert", the shortcode will be inserted into editor.

5.2 List of available shortcodes & how to use them

1) Article Box - the same item as [Article Box](#) from Muffin Builder but can be used as text shortcode. This item got below attributes:

- **image** (put path to image for article box shortcode)
- **title** (title for article box shortcode)
- **link** (link to page)
- **target** (optional target for link, ex. "_blank")

Below you can see the example of article box shortcode:

```
[article_box image="http://path-to-image" title="Title for image"
link="http://link-to-page" target="_blank"] Insert your content here
[/article_box]
```

For more info and demo please go to [article box shortcode demo](#)

2) Blockquote - as name indicates, this is the blockquote to use on pages. Attributes for blockquote are:

- **author** (author for blockquote)
- **link** (link to page)
- **style** (choose *Modern* or *Classic* style for blockquote)
- **target** (optional target for link, ex. "_blank")

Below you can see the example of blockquote shortcode:

```
[blockquote author="muffingroup" link="http://muffingroup.com"
style="modern" target="_blank"] Insert your content here [/blockquote]
```

For more info and demo please go to [blockquote shortcode demo](#)

3) Blog - this item gives you many possibilities. You can put blog on any page you like and you can use it with other shortcodes.

This item got few attributes:

- **count** (type number of posts that you want to show with blog shortcode)
- **category** (type name of category for blog shortcode, ex: "applications")
- **style** (we got 3 predefined styles for blog items - choose your own from the following one: *classic*, *modern* or *masonry*)
- **pagination** (choose *1* if you want to get pagination or *0* if you don't want)

Below you can see the example of blog shortcode:

```
[blog count="2" category="applications" style="modern" pagination="0"]
```

For more info and demo please go to [blog shortcode demo](#)

4) Buttons - as name indicates, these are the buttons to use on pages. Attributes for buttons are:

- **title** (title for button)
- **link** (link to other page)
- **target** (optional target for link, ex. "_blank")
- **size** (optional size of button - "normal" is default, you can also choose "small" or "large")
- **color** (color for text - as in background color you can use name of color, ex. "white" or hex ex. "#FFFFFF")
- **filled** - type 1 if you want button filled with color or leave it empty if not
- **large** - type 1 if you want large button or leave it empty if not
- **class** - this option is useful when you want to use **prettyPhoto**

Below you can see the example of buttons shortcode:

```
[button title="default" link="1" target="_blank" size="" color="" filled="" large="" class=""]
```

For more info and demo please go to [buttons shortcode demo](#)

5) Chart - use this item if you want to put some charts on your page.

This item got 4 attributes:

- **percent** (type number of percents for chart shortcode)
- **label** (text in chart icon)
- **position** (you can choose *left* or *top* position for this item)
- **title** (type title for this item)

Below you can see the example of chart shortcode:

```
[chart percent="50" label="50" position="left" title=""] Insert your content here [/chart]
```

For more info and demo please go to [chart shortcode demo](#)

6) Clients - with this shortcode you can put clients on page.

This item got just one attribute "in_row" and you must type the number of client items that you want to display.

Below you can see the example of clients shortcode:

```
[clients in_row="6"]
```

For more info and demo please go to [clients shortcode demo](#)

7) Contact box - the same as [Contact box](#) item from Muffin Builder.

This item got 8 attributes:

- **title** (type title for contact box shortcode)
- **address** (type address)
- **telephone** (type phone number)
- **email** (type email)
- **www** (type url - start with **http://**)
- **link_text** (type button text)
- **link** (type button link - start with **http://**)
- **style** (choose *Classic* or *Modern* style)

Below you can see the example of contact box shortcode:

```
[contact_box title="Ask question" address="14th Avenue Street"
telephone="+40 4290-09-21" email="noreply@envato.com"
www="http://muffingroup.com" link_text="Call us" link="#" style="classic"]
```

For more info and demo please go to [contact box shortcode demo](#)

8) Counter - the same as [Counter](#) item from Muffin Builder.

This item got 5 attributes:

- **icon** (type any icon you want from [list of available icons](#))
- **color** (type color in hex format, ex. #000000)
- **image** (instead of icon you can give path to image)
- **number** (type number value)
- **title** (type title)

Below you can see the example of counter shortcode:

```
[counter icon="icon-heart-line" color="#222222" image="" number="44"
title=""]
```

For more info and demo please go to [counter shortcode demo](#)

9) Divider - This item is creating space between elements. It is also aligning for a single line, boxes located underneath.

Divider shortcode has got 2 attributes:

- **height** - enter the amount of the divider height (in px)
- **line** - type 1 if you want to show line, 0 if you don't want

Example of this shortcode below:

```
[divider height="30" line="1"]
```

For more info and demo please go to [divider shortcode demo](#)

10) Fancy heading - the same as [Fancy heading](#) item from Muffin Builder.

This item got 4 attributes:

- **title** (type title)
- **icon** (type any icon you want from [list of available icons](#))
- **image** (type path for fancy heading background image)
- **style** (you can choose one of the following value for this attribute: *color, image, small_icon, big_icon*)

Below you can see the example of Fancy heading shortcode:

```
[fancy_heading title="" icon="icon-heart-line" image="http://#" style="color" class=""] Insert your content here [/fancy_heading]
```

For more info and demo please go to [fancy heading shortcode demo](#)

11) Icon box - the same as [icon box](#) item from Muffin Builder.

This item got 5 attributes:

- **title** (type title)
- **icon** (type any icon you want from [list of available icons](#))
- **icon position** (type *left* or *top* position for icon inside this item)
- **link** (link to any page you like - start with **http://**)
- **target** (optional target for link, ex. "_blank")

Below you can see the example of Icon box shortcode:

```
[icon_box title="" icon="icon-heart-line" icon_position="left" link="" target="_blank"] Insert your content here [/icon_box]
```

For more info and demo please go to [icon box shortcode demo](#)

12) Highlight - This item is text with nice highlight effect. You have 2 styles for this item - background and text color for highlighted section or line under text.

Highlight shortcode has got 3 attributes:

- **background** - background color for highlighted text
- **color** - text color for highlighted text

- **line** - choose "0" if you want to use class highlight or "1" if you want to get nice line under highlighted text

Example of this shortcode below:

```
[highlight background="" color="" line="0"] Insert your content here
[/highlight]
```

For more info and demo please go to [highlight shortcode demo](#)

13) Ico - this is a very useful option for embedding icons into page. This option has got just one attribute:

- **type** (type of icon)

Below you can see some examples of this shortcode:

```
[ico type="icon-rocket"]
[ico type="icon-food-line"]
```

For more info and demo please go to [ico shortcode demo](#)

14) Image - this is a very useful option for embedding images into page. This option has got a long list of available attributes:

- **src** (url to image)
- **align** (optional alignment for image) - available values: none (default), left, right, center
- **caption** (optional) - text available under the image
- **link** (optional) - link for larger image or other page
- **link_type** (optional) - type of link can be chosen from 2 values available:
- **target** (optional, works only with "details" link_type) - link target, available value: "_blank" (open in new window)
- **alt** (optional) - alternative text for image

Below you can see some examples of this shortcode:

```
[image src="" link="" align="left" caption="Align left with caption and
lightbox"]
```

```
[image src="" link="" link_type="details" target="_blank" align="right"
caption="Align right with caption <br /> and link to details <br /> open in
new window"]
```

```
[image src="" align="center"]
```

For more info and demo please go to [image shortcode demo](#)

15) Lists - great tool when you want to present something within the list. We prepared 11 types of lists. Below you can check all of them:

Unordered bullet list

```
<ul class="list">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Ordered list

```
<ol class="list">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Roman ordered list

```
<ol class="list list_roman">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Alpha ordered list

```
<ol class="list list_alpha">
<li>List item 1</li>
<li>List item 2</li>
</ol>
```

Unordered tick list

```
<ul class="list list_tick">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered info list

```
<ul class="list list_info">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered warning list

```
<ul class="list list_warning">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered plus list

```
<ul class="list list_plus">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered minus list

```
<ul class="list list_minus">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered arrow list

```
<ul class="list list_arrow">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

Unordered help list

```
<ul class="list list_help">
<li>List item 1</li>
<li>List item 2</li>
</ul>
```

As you can see, all of these lists have only a different kind of class. So if you want to change type of the list, you can easily do so by just changing the name of class..

For more info and demo please go to [lists shortcode demo](#)

16) Map - the same item as [Map](#) from Muffin Builder.

This item got 4 attributes:

- **lat** - right *Latitude* value for map
- **lng** - right *Longitude* value for map
- **height** - type height in px for your map
- **zoom** - type number for google map zoom, ex: 13

Example of this shortcode below:

```
[map lat="" lng="" height="200" zoom="13"]
```

For more info and demo please go to [map shortcode demo](#)

To get right lat & lng value we recommend to use <http://itouchmap.com/latlong.html> tool.

17) Our team - the same item as [Our team](#) from Muffin Builder.

This item got 9 attributes:

- **image** - type path for image
- **title**
- **subtitle**
- **email** - type email for our team item
- **phone** - type phone number for our team item
- **facebook** - type link for facebook profile - always start with **http://**
- **twitter** - type link for twitter profile - always start with **http://**
- **linkedin** - type link for linkedin profile - always start with **http://**
- **style** - choose between *Classic* and *Modern* style

Example of this shortcode below:

```
[our_team image="http://path-to-image" title="" subtitle="" email="" phone="" facebook="" twitter="" linkedin="" style="modern"]
```

For more info and demo please go to [our team shortcode demo](#)

18) Portfolio - the same item as [Portfolio](#) from Muffin Builder.

This item got 6 attributes:

- **count** - type the number of items you want to show
- **category** - type name of category from which you want to show portfolio items, ex: *applications*
- **orderby** - you can order items by: *date*, *menu_order* or *title*
- **order** - you can order items by *ASC* or *DESC*
- **style** - you can choose one of the following styles: *one*, *one-second*, *one-three*, *one-four*
- **pagination** - type *1* if you want to show pagination or *0* if you don't want

Example of this shortcode below:

```
[portfolio count="2" category="applications" orderby="date" order="DESC" style="one" pagination="0"]
```

For more info and demo please go to [portfolio shortcode demo](#)

19) Pricing Item - the same item as [Pricing table](#) from Muffin Builder.

This item got 9 attributes:

- **image** - type path for the image
- **title**
- **price** - type price for pricing item
- **currency** - type currency that is the best for you
- **period** - type period for pricing item
- **link_title** - type title for button
- **link** - type url for pricing item button
- **featured** - type featured if you want to get nice ribbon in the corner of item
- **border** - choose *1* if you like border or *0* if you don't like

Example of this shortcode below:

```
[pricing_item image="" title="" price="" currency="" period=""  
link_title="" link="" featured="" border="0"]  
  
<ul>  
  
    <li><strong>List</strong> item</li>  
  
</ul>  
  
[/pricing_item]
```

For more info and demo please go to [pricing item shortcode demo](#)

20) Progress bars - the same item as [Progress bars](#) from Muffin Builder.

This item got 3 attributes and is splitted on 2 blocks:

- **title** - type title for general progress bars item
- **title** - type title for bar inside progress bar section
- **value** - type value for bar

Example of this shortcode below:

```
[progressBars title=""][bar title="Bar1" value="50"][/progressBars]
```

For more info and demo please go to [progress bars shortcode demo](#)

21) Progress box - the same item as [Progress box](#) from Muffin Builder.

This item got 2 attributes:

- **value** - type value for progress box item
- **title** - type title for progress box item

Example of this shortcode below:

```
[progress_box value="" title=""] Insert your content here [/progress_box]
```

For more info and demo please go to [progress box shortcode demo](#)

22) Table - this shortcode allow you to create table on page. This item doesn't have any special fields. We used standard HTML code for that.

Example of this shortcode below:

```
<table>

<thead>

<tr>

<th>Column 1 heading</th>

<th>Column 2 heading</th>

<th>Column 3 heading</th>

</tr>

</thead>

<tbody>

<tr>

<td>Row 1 col 1 content</td>

<td>Row 1 col 2 content</td>

<td>Row 1 col 3 content</td>

</tr>
```

```
<tr>

<td>Row 2 col 1 content</td>

<td>Row 2 col 2 content</td>

<td>Row 2 col 3 content</td>

</tr>

</tbody>

</table>
```

For more info and demo please go to [table shortcode demo](#)

23) Testimonials - the same item as [Testimonials](#) from Muffin Builder.

This item got 4 attributes:

- **category** - type name of category from which you want to show portfolio items, ex: *applications*
- **orderby** - you can order items by: *date*, *menu_order* or *title*
- **order** - you can order items by *ASC* or *DESC*
- **border** - type *1* if you like border or *0* if don't

Example of this shortcode below:

```
[testimonials category="applications" orderby="menu_order" order="ASC" border="1"]
```

For more info and demo please go to [testimonials shortcode demo](#)

24) Video - this shortcode is for embadding vimeo & youtube videos on your page.

Video shortcode has got 3 attributes:

- **video** - vimeo video's ID. This value is placed at the end of every vimeo video after last "/", for example: <http://vimeo.com/19819283>
- **width** - player's width, 700 is highly recommended for left or right sidebar template while 950 for a default one.
- **height** - video player's height

Example of this shortcode below:

```
[video video="62954028" width="700" height="400"]
```

For more info and demo please go to [video shortcode demo](#)

25) Video box - the same item as [Video box](#) from Muffin Builder.

This item got 2 attributes:

- **title** - type name for video box item
- **video_m4v** - type path to video in m4v/mp4 format

Example of this shortcode below:

```
[video_box title="" video_m4v=""] Insert your content here [/video_box]
```

For more info and demo please go to [video box shortcode demo](#)

6. Blog

To create a blog please create a new page *Pages > Add New* and set up the title eg. *Blog*. In field *Template* leave default option on *Default Template*. In bottom section you will find *Page options* such as *Layout* and *Sidebar*. As you probably have guessed, you can choose whether your blog should be on full width or whether you want it with the sidebar (left or right). If you want blog with the sidebar you should also select the right sidebar for your page. You can also add video for each post. In section *Post option*, under the *Visual/HTML* default editor you have some options to set. In this section you can set up **Vimeo** or **Youtube** video.

At the end please click *Publish* button on the right.

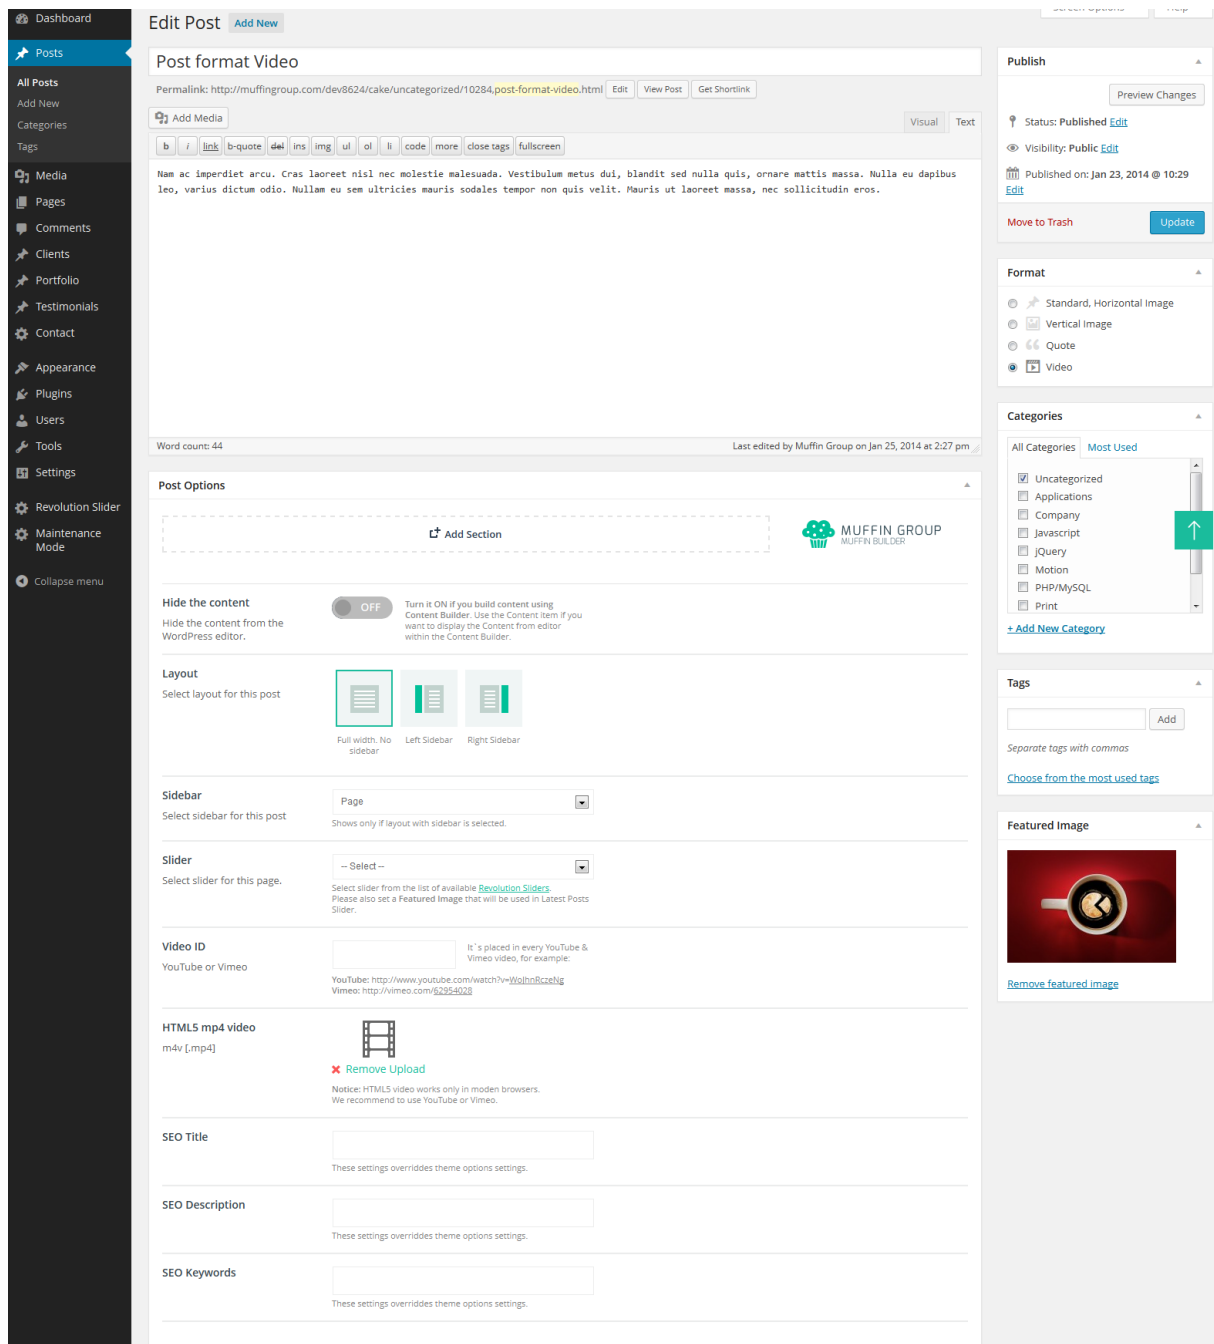

In the next step please go to *Settings > Reading > Front page displays > A static page > Posts page*, select page that you have already created and click *Save changes*.

We have created some features specifically for bloggers. You will find them in *Theme options panel > Getting started > Blog*. These options are set on default for each new post. Full description of options for blog can be found in section **Theme Options (section 4.1.3)**

Adding new posts works similar to standard WordPress *Posts > Add New*. Posts will be displayed on the already created page.

Images for posts we can add using *featured image*.

With the latest version you can use [Muffin Builder](#) inside posts. Of course you can still use wordpress default editor but if you want create something advanced then you can use our easy to use builder - the same as for pages. Under muffin builder you can find also a lot of options what you can see on below image:

With this version we created also posts formats what you can also see on screenshot above. We already did 4 posts formats: *Standard Horizontal Image*, *Vertical Image*, *Quote* and *Video*.

For more info about post creation please go to <http://en.support.wordpress.com/posts/>. You can also check the movie about how to create a post <http://www.youtube.com/watch?v=Sa4uimrgNz8>

7. Portfolio

To create a portfolio please start by creating a new page *Pages > Add New* and setting up the title eg. *Portfolio*. In field *Template* set the option *Portfolio template*. In the bottom section you also have *Page options* such as *Layout* and *Sidebar*. As you have probably guessed, you can select whether your portfolio should be in full width or whether it should be with a sidebar (left or right). If you decide on the portfolio with a sidebar you should also select the right sidebar for your page.

In *Portfolio* section you can also add videos from **Vimeo** or **Youtube** for each portfolio item. Please don't forget set up featured image for portfolio item when you are adding video.

We have created some options for *Portfolio page*. You can find them in *Theme options panel > Getting started > Portfolio*. More info about these options can be found in **Theme options panel (section 4.1.4)**.

Portfolio items are working just like typical post. To add a new portfolio please go to *Portfolio > Add new*. As you can see you choose similar options as for a blog. Additionally, in the bottom section of the page you have *Page options*. Here you can choose whether you want a full width portfolio or the one with a sidebar (left or right). When you choose the option with a sidebar **please don't forget to select the right sidebar** for this page.

You can also type *Excerpt* and select *Featured image*. After that please just click *Publish* button.

With Cake, we added many new options for Portfolio. Now, whole content inside portfolio item can be created with **Muffin Builder** (of course you can use wp default editor as well if you want). It works the same way as for standard pages. Under Muffin Builder you can also find more options like SEO fields, slider, sidebars and many other. All available options for Portfolio item you can check below:

<h5>Now you can use Content Builder for portfolio also! Below you have simple example of Content Builder usage.</h5>
 Suspendisse turpis et odio. Vestibulum aliquam odio. Nunc at sapien. Aliquam eleifend, ligula. Etiam rutrum, enim ac imperdiet sagittis, elit. Sed ut odio sit amet, tortor. Aliquam eu dolor quis felis tincidunt interdum. Nam luctus nulla dolor. Mauris nec ultrices diam. Phasellus commodo diam et accumsan elementum. Praesent a vestibulum metus, nec mollis dui. Nunc non mauris lectus. Suspendisse sodales urna sed bibendum tristique.

8. Menu creation

Menu creation works as in default Wordpress.

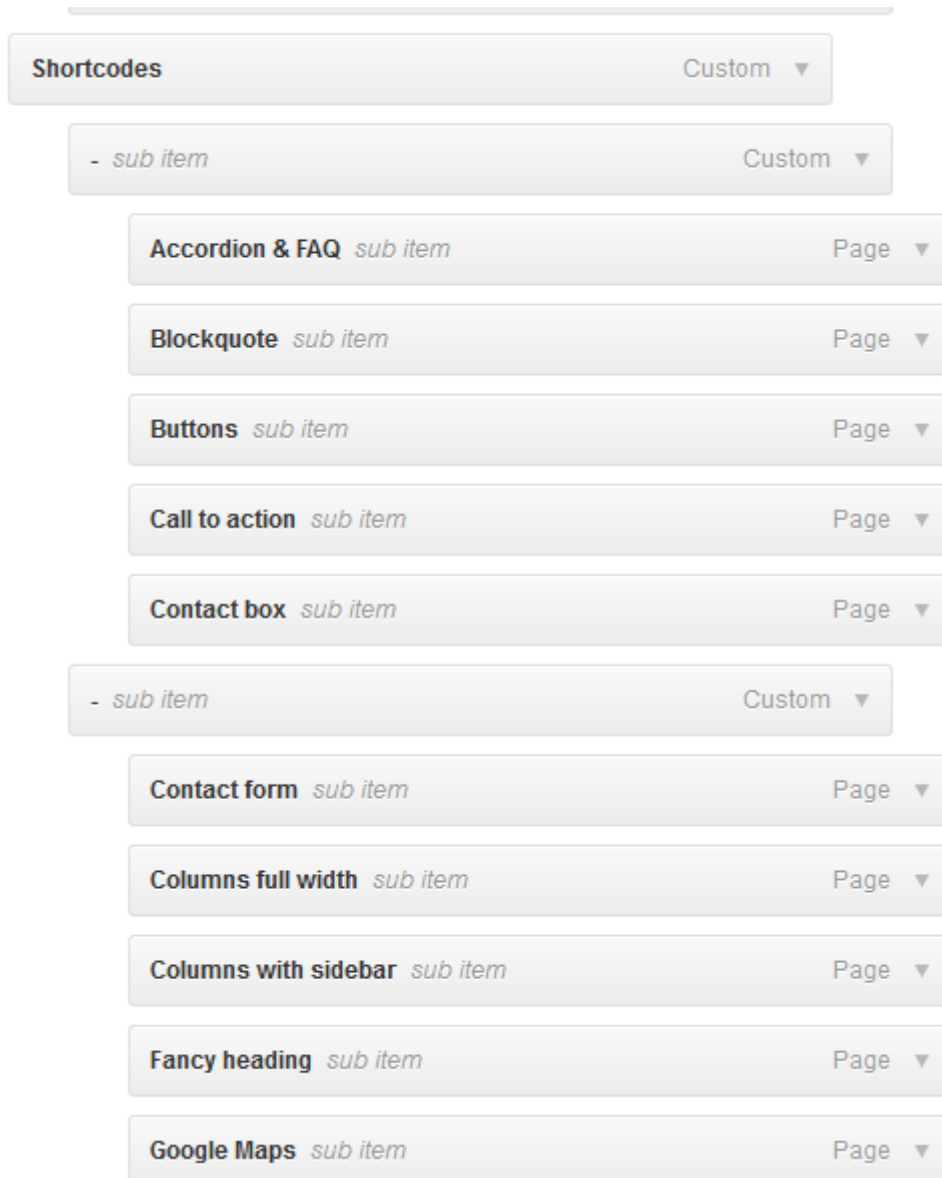

To add your own menus go to *Appearance > Menus*, type *Name* for your menu and click *Create Menu*. In next step, in section *Theme Locations* for position *Main menu* you need to choose a menu that you've just created.

Now you can add *Pages*, *Posts* and *Custom Links* from blocks located on the left. At the end you need to save it by clicking on *Save Menu*.

If you want to add special things to menu like *portfolio categories*, *posts categories*, *classes for links*, etc. then please click on "Screen options" button in right top corner and there is much more options that can be used for menu items.

For more info about the menu creation please go to <http://en.support.wordpress.com/menus>

With this theme we also created Mega Menu option so you can create nice menus with items in columns with titles or without. If you want to create mega menu as we did for "Shortcodes" section on our demo, then it should be done as on below image:

For **Mega Menu** columns you must add menu item with # "URL" attribute and - as "Navigation label" value. Under this empty columns you can add right menu items.

But if you want columns with "Titles" at the top, then instead of - you must type own value.

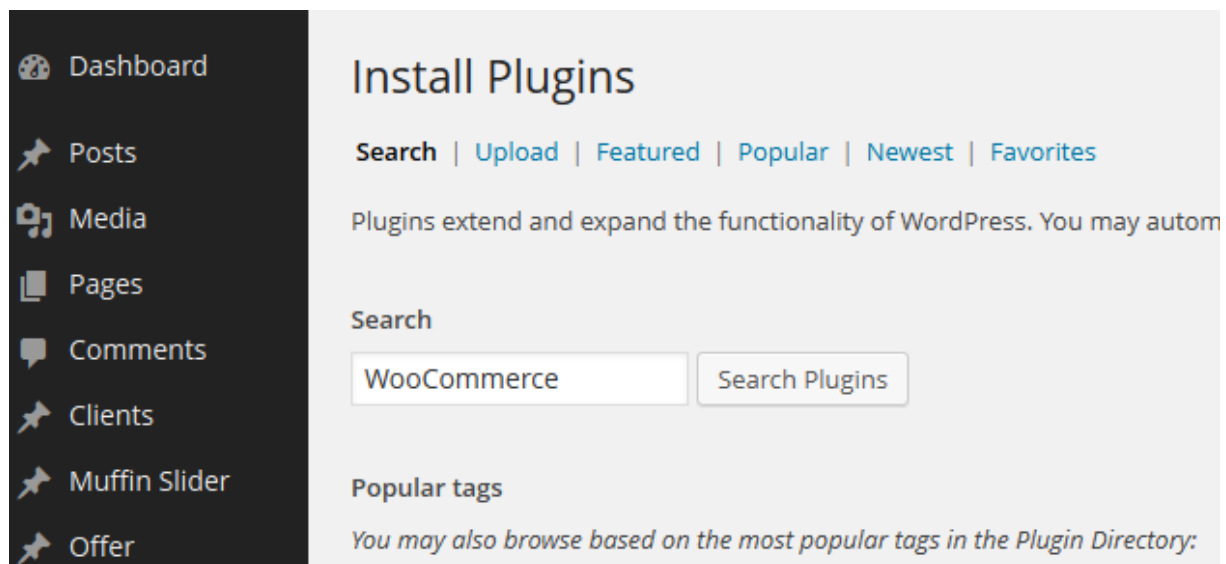

To understand how we built menu with MegaMenu options, we recommend to upload xml file with dummy content so you can learn faster and easier how it works.

9. WooCommerce / Shop integration

Cake is fully compatible with WooCommerce plugin. We carefully created whole design so you can get very nice shop with tons of options and all looks perfect with theme design. WooCommerce is external plugin and all info about this awesome plugin you can find plugin's author page. Below you have all friendly links that will be useful:

- [WooCommerce Plugin Page](#)
- [WooCommerce Documentation](#)
- [WooCommerce Forum](#)
- [WooCommerce Shortcodes](#)

1. How to install WooCommerce and setup the default shop pages

At first please go to *Plugins > Add new* section and type "WooCommerce" into search field. Then click "Search Plugins" button.

After that you will results and what you need to do is click on "Install now" button next to "WooCommerce - excelling eCommerce" plugin.

After that plugin will be installed and please click "Activate plugin" link.

Later you will then see a WooCommerce Purple Notification Bar at the top of the plugin page. Click the Install WooCommerce Pages button in the purple bar to install all the default pages.

Please Note: Once you are done installing WooCommerce and the default pages, you can go to the *Appearance > Menu* section of your admin and choose to add all the WooCommerce pages to your menu. They will be listed at the top under the most recent pages.

2. How to add new product

Go to *Products > Add product* section. After that you will see page which looks like below and all you need to do is fill those fields with own values:

The screenshot shows the 'Add New Product' page in the WordPress admin. The left sidebar contains the navigation menu with 'Products' selected. The main content area is titled 'Add New Product' and features a text editor at the top. Below the editor is the 'Product Data' section, which is currently set to 'Simple product'. It includes fields for 'SKU', 'Regular Price (\$)', and 'Sale Price (\$)'. The 'Custom Fields' section allows for adding new metadata. At the bottom, there is a 'Product Short Description' section with another text editor. The right sidebar contains various options: 'Publish' (with 'Save Draft', 'Preview', and 'Publish' buttons), 'Product Categories' (with a list of categories like Clothing, Hoodies, T-shirts, Music, Albums, Singles, Posters), 'Product Tags' (with an 'Add' button), 'Product Gallery' (with 'Add product gallery images'), and 'Featured Image' (with 'Set featured image').

All info about adding new product you can read on <http://docs.woothemes.com/document/managing-products/>

3. How to use WooCommerce shortcodes and setup pages for shop

All pages that you want to setup for WooCommerce are in *WooCommerce > Settings > Catalog* section. But if you want to get some shortcodes for pages like cart or checkout (most WooCommerce pages must be created manually and that's why for each you have own shortcode) you need go to *WooCommerce > Settings > Pages* section.

Whole list of shortcodes included with WooCommerce plugin you can find on <http://docs.woothemes.com/document/woocommerce-shortcodes/>

List of all available pages for WooCommerce plugin you can find on <http://docs.woothemes.com/document/woocommerce-pages/>

10. Translation & WPML

Beacause each user is different, we created few ways to translate theme.

10.1 Use .mo/.po files and Poedit software

For all those who prefer translation with files included into theme we recommend to use .mo/.po files. Those files works in pair so for each language you need to have 2 files with the same name but different extension. For example if you want to translate theme into German language, you're files should be **de_DE.mo** and **de_DE.po**

For editing this files you need to use [Poedit](#) software which is very easy to use. All you need to do is upload those files into this software, edit them and upload into "languages" folder where theme is installed.

10.2 Use our built-in translator

If you don't want to play with above files and prefer much easier and faster way to translate your theme we recommend to use our built-in translator. This tool is in *Theme options > Translate* section. More info about this translation way you can read in [section 4.5](#).

10.3 Multilingual website / WPML integration

Cake was tested with [WPML plugin](#) and is fully compatible. If you want to have multilingual website, this is the best way to do it. If you want to use this plugin, you must purchase it first and then install into your wordpress installation. Below we serve links that will be useful for WPML plugin:

- [WPML Documentation](#)
- [WPML Suport Forum](#)
- [Translating Widgets](#)

11. Retina ready

Cake is fully Retina Ready. All images around website can have 2 different sizes - first one is standard image for most screens but the second one is for all devices with HQ screen like Retina.

For logo we got additional field in Theme options > Layout > Header section. In this section you can upload standard logo and retina (this second one must be 2x larger than regular).

The same thing happen to all other images but only if you want to get perfect looking images on Retina screens. If for example you build website where you upload regular images into Content or Muffin Builder, you must always upload 2 images in *Media > Add new* section which looks like below:

my_image.png - this is the name for standard image

my_image@2x.png - this is the example name for retina image and file must be always 2x larger than regular image

So as you can see above, the second file for retina must have **@2x** additional name for file.

If you will upload all images twice as we described above, your whole website will get perfect images on all kind of devices.

12. Images

For this theme we used some images & icons available on the web. Some of them were made by us but some we get from:

<http://www.flickr.com/>

<http://photodune.net/>

13. SEO

In the era of what is happening in the search engines (especially *Google*) we implemented SEO option in our theme. We hope this will be very helpful for all of you.

To set up general options for SEO please go to *Theme options panel > Getting started > General* . You can set up here things like *Meta Description* or *Meta Keywords* for homepage (this is also default option for each new page).

If you are using *external SEO plugin* you can easily turn it off. Of course you can also set up options like *Title*, *Meta Description* and *Meta Keywords* for each page in this theme. You can do it in *Pages > Add page > Page options*.

In section *Page Options*, *Post Options* & *Portfolio ItemOptions* you can find fields like **SEO Title**, **SEO Description** and **SEO Keywords**. If you fill those fields, the page will adopt this values. If you leave this fields empty, the page will adopt default values that are in *Theme options panel > Getting started > General*.

14. Support & contact with us

You can contact us in few ways. It depends on what you exactly need.

- **If you have got a questions about theme**, please place your question on forum <http://forum.muffingroup.com/cake> . Please note that we won't answer support question in comments or emails - we prefer to provide you with support on forum because your question can be helpful to other customers.
- Via comments you can send only presale questions or comment that is not related to support.
- **If you have a really big problem and really need to give us access to your account** (that is personal and can only be used by support) you can contact us by using contact form on **our profile's page on Themeforest** <http://themeforest.net/user/muffingroup> - in right bottom section of page.

There is no other way contact with us. So **please don't contact us by sending message on youtube, facebook or twitter** - because it's really difficult for us to control, your question could be lost in these communication channels.

15. XML file with demo content

Get your .xml file

What for do you need XML file?

Enter Your Themeforest username

Enter Themeforest purchase code

[How to get purchase code?](#) **Download**

To **download the XML file with demo content** please at first go to page: <http://themes.muffingroup.com/xmls/>

In next step please select a product for which you need xml file (in this case please choose **Cake**). Please also paste your *themeforest username* and *purchase code*. Afterwards simply click "*Download*" and your file should start downloading.

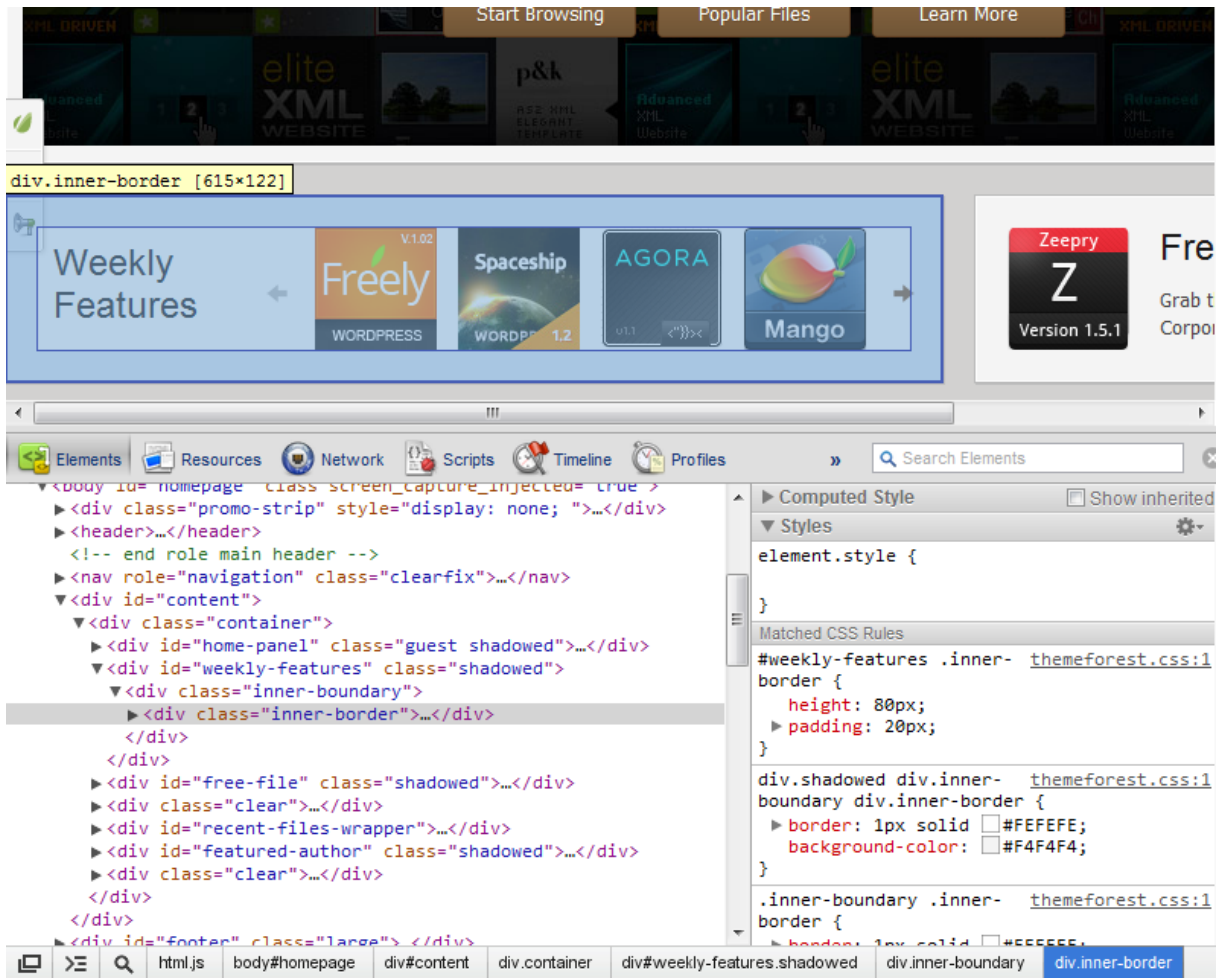

When you get this file onto your computer, you can import it into your wordpress (please import this file only after installing **Cake theme**). This video (<http://www.youtube.com/watch?v=ohKx65P2HNU>) will show you how to import this file properly.

16. Advanced theme customization

Sometimes there is a moment when you want to change something on your site that is not available in theme options panel. Something like: font size, color, margin or any other customization. You don't have to ask us about all these things and wait for our response ever again. You can succeed in doing it on your own.

16.1 Google Chrome

To do it you can use two best tools available for free in your web browser. If you're using **Google Chrome** you can inspect element that you need to change by "Inspect element". To do it just hover mouse on element and click "Inspect element". After that you'll see something like on screen below:

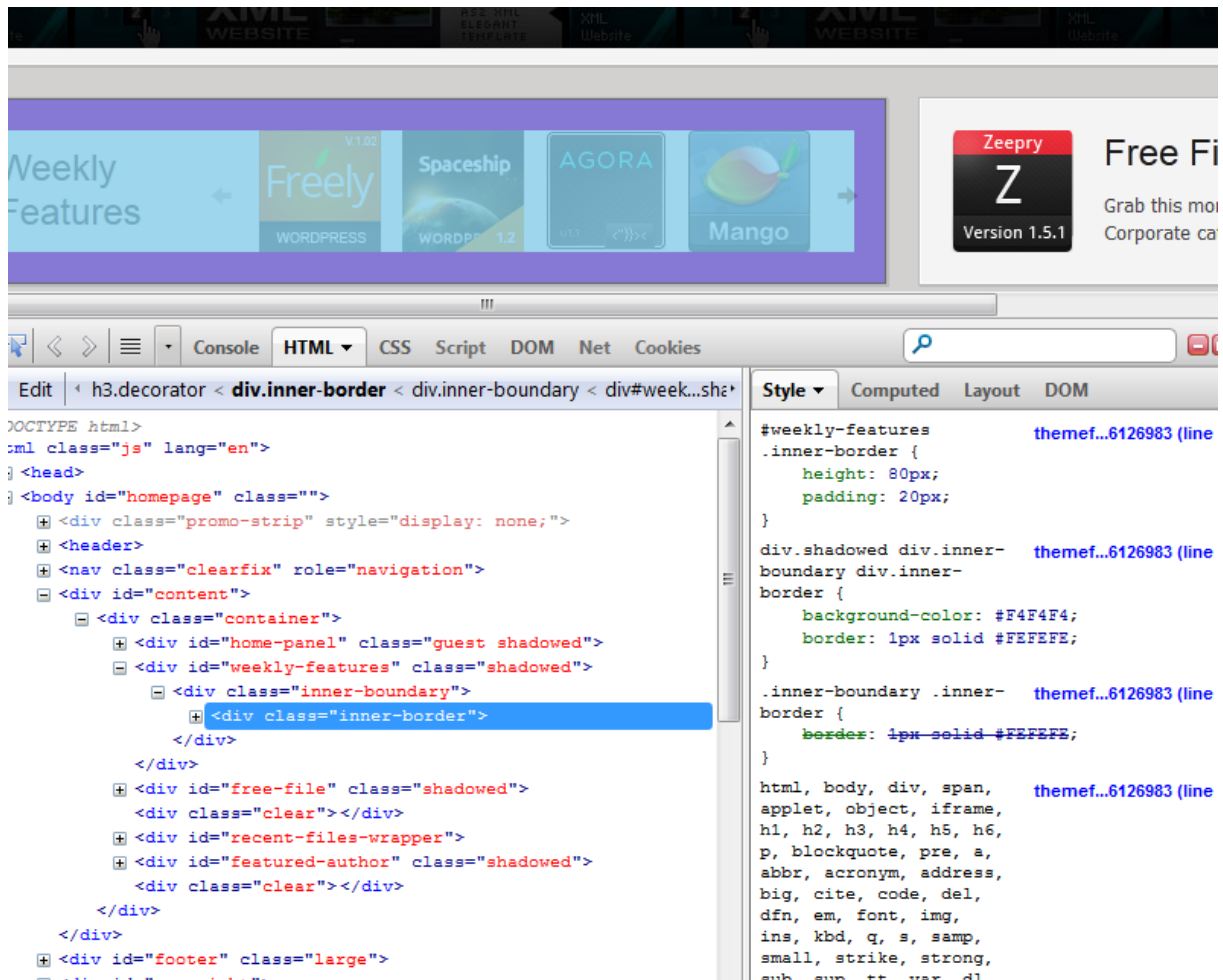

As you can see on the image, on the left side there is a list of styles used for each class/id. If you want to change something, you can edit it on the screen and see how the elements look like. If everything is good and you want to make the same changes on your site please copy right styles from box of right side, for example:

```
#weekly-features .inner-border {
    height: 80px;
    padding: 20px;
}
```

and paste this code into: *Theme options > Styles > Custom CSS code*. If you want to paste this code instead of Custom CSS code you can do it in *custom.css* file. The result will be identical. It's up to you to decide on which way to use.

16.2 Firebug for Firefox

Apart from Google Chrome, we also suggest to use **Firebug for Firefox**. In contrast to Google Chrome, Firebug must be installed at first before you can use it. To do so please click **Firefox in the left top corner > Add-ons** and then search for Firebug and install it. When you get it into your browser you can use it the same way as with Google Chrome but instead of clicking "*Inspect element*" please click "*Inspect element with Firebug*". On the screen below you can see that it will look very similar to Inspect element in Google Chrome.

As you can see on image, on the left side there is a list of styles used for each class/id. If you want to change anything you can edit it on the screen and check what elements look like. If everything is good and you want to make the same changes on your site please copy right styles from box of right side, for example:

```
#weekly-features .inner-border {  
  
    height: 80px;  
    padding: 20px;  
  
}
```

and paste this code into: *Theme options > Styles > Custom CSS code*. If you want to paste this code instead of Custom CSS code you can do it in *style.css* file. The result will be identical. It's up to you to decide on which way to use.

As you can see, it's not difficult to use it and with the support of this tool you can save a lot of time, so we encourage you to try to do it as described and enjoy your new skills.
